## **PREFACE**

Pursuant to Tenn. Code Ann. §68-212-118, the Commissioner of the Department of Environment and Conservation as well as the Underground Storage Tanks and Solid Waste Disposal Control Board hereby submit this report on behalf of the State of Tennessee's Hazardous Waste Regulatory Program.

### About the Solid Waste Management's Hazardous Waste Program

The Hazardous Waste Management Program regulates hazardous waste generation, transportation, storage, treatment, and disposal. It has authority over facilities subject to Environmental Protection Agency (EPA) Resource Conservation and Recovery Act (RCRA) Subtitle C. Such activities are overseen by EPA Region 4. The Hazardous Waste Management Program operates under the authority of the Hazardous Waste Management Act of 1977 (T.C.A. §68-212-101 et seq.) and various Hazardous Waste Management rules.

Implementation of Tennessee's hazardous waste program began in October 1980, although regulation of hazardous waste is also a federal responsibility under RCRA. Tennessee has been authorized by EPA to administer the majority of the federal program and receives a grant in support of this effort. Other funding for this program is obtained through a fee collection system as well as State appropriations.

The coordinated state and federal program regulates activities such as:

- the permitting and inspection of hazardous waste storage, recycling, treatment, and disposal facilities;
- the management of hazardous waste from generators (primarily manufacturing industry) through the required waste stream notifications, annual reports, and waste reduction plans;
- the annual registration of hazardous waste transporters; and
- the regulation of used oil facilities and transfer facilities.

Hazardous waste management facilities receive hazardous wastes for treatment, storage, or disposal. These facilities are often referred to as treatment, storage, and disposal facilities, or TSDFs.

Treatment facilities use various processes (such as incineration or oxidation) to alter the character or composition of hazardous wastes. Some treatment processes enable waste to be recovered and reused in manufacturing settings, while other treatment processes dramatically reduce the amount of hazardous waste.

Storage facilities temporarily hold hazardous wastes until they are treated or disposed of while disposal facilities permanently contain hazardous wastes. The most common type of disposal facility is a landfill, where hazardous wastes are disposed of in carefully constructed units designed to protect groundwater and surface-water resources.

The detailed regulations located in Tennessee Rules 0400-12-01-.06 and .07 ensure that TSDFs operate safely and protect human health and the environment. Facilities that currently or plan to treat, store, or dispose of hazardous wastes must obtain a RCRA permit using the procedures outlined in Rule 0400-12-01-.07. A RCRA permit is a legally binding document that establishes operating requirements and various provisions specific to the needs of the permit applicant depending on the treatment, storage, or disposal activities conducted at the facility. Permits are written to address the specific geography of the facility, the types of hazardous waste management units, and the specific waste streams that will be managed at the facility. The permit also outlines facility design and operation, lays out safety standards, and describes activities that the facility must perform, such as monitoring and reporting. Permits typically require facilities to develop emergency plans, obtain insurance and financial backing, and train employees to handle hazards, can include facility-specific requirements such as groundwater monitoring.

**How the data is collected:**

Handlers of hazardous waste are required to notify the state of their activity pursuant to 0400- 12-01. Completed forms are required, to the Division, to be submitted by March 1st of each year detailing their hazardous waste activity for the previous calendar year, frequently referred to as the "Report Year."

## AMOUNT OF HAZARDOUS WASTE TYPES

## **Hazardous Waste Handlers Permitted or Registered by the Commissioner**

The Tennessee Hazardous Waste Management Act of 1977, TCA Section 68-212-101, requires the Division of Solid Waste Management (DSWM) to identify and regulate hazardous waste generators, hazardous waste treatment storage and disposal facilities, and hazardous waste transporters. Hazardous waste generators are categorized into three groups: large quantity generators (LQG); small quantity generators (SQG); and conditionally exempt small quantity generators (CESQG). The numbers for each generator status are listed in Table 1.

Transporters of hazardous waste are required to obtain a permit if they drop off or pick up hazardous waste in the State of Tennessee. The DSWM permits and tracks both in state and out of state transporters as long as they operate or reside in Tennessee. Other states require an EPA ID for such a transporter (just as Tennessee requires out of state transporters to have an EPA ID from their home state). An effort is made to check transporters against other databases, particularly US Department of Transportation (DOT) web sites.

*Note: Some data values may change slightly as adjustments and audits are completed. This can occur over a period of years. Every attempt is made to obtain the most current data. HW TRANSPORTER MAINT FEE is collected from November 1, 2016 to January 31, 2017 all other fees are from January 1 to December 31, 2017.*

*All raw data is received from Fiscal Services and then it is matched to internal documentation which gives the final data used for reporting.*

## WASTE GENERATED

**Hazardous Waste Generated, Received, and Shipped in the State of Tennessee**

The Hazardous Waste Generated in the state of TN is separated into two distinct categories, wastewaters and non-wastewaters. Wastewaters are defined as waste that are treated onsite and discharged to a publicly owned treatment work (POTW) or to a national pollutant discharge elimination system (NPDES). All other waste is determined to be a non- wastewater.
