PREFACE

The Commissioner of the Department of Environment and Conservation and the Underground Storage Tanks and Solid Waste Disposal Control Board hereby submit this report on behalf of the State of Tennessee's Hazardous Waste Regulatory Program.

About the Solid Waste Management's Hazardous Waste Program

The Hazardous Waste Management Program regulates hazardous waste generation, transportation, storage, treatment, and disposal. It has authority over facilities subject to EPA RCRA Subtitle C. Such activities are overseen by EPA Region 4. The Hazardous Waste Management Program operates under the authority of the Hazardous Waste Management Act of 1977 (T.C.A. §68-212-101 et seq.) and various Hazardous Waste Management rules.

Implementation of Tennessee's hazardous waste program began in October 1980. Regulation of hazardous waste is also a federal responsibility under the Resource Conservation and Recovery Act (RCRA). Tennessee has been authorized by EPA to administer the majority of the federal program and receives a grant in support of this effort. Other funding for this program is obtained through a fee collection system as well as State appropriations.

The coordinated state and federal program regulates activities such as:

- the permitting and inspection of hazardous waste storage, recycling, treatment, and disposal facilities;
- the management of hazardous waste from generators (primarily manufacturing industry) through the required Waste Stream Notifications, Annual Reports, and Waste Reduction Reports;
- the annual registration of hazardous waste transporters and the regulation of used oil.

Hazardous waste management facilities receive hazardous wastes for treatment, storage, or disposal. These facilities are often referred to as treatment, storage, and disposal facilities, or TSDFs.

Treatment facilities use various processes (such as incineration or oxidation) to alter the character or composition of hazardous wastes. Some treatment processes enable waste to be recovered and reused in manufacturing settings, while other treatment processes dramatically reduce the amount of hazardous waste.

Storage facilities temporarily hold hazardous wastes until they are treated or disposed of.

Disposal facilities permanently contain hazardous wastes. The most common type of disposal facility is a landfill, where hazardous wastes are disposed of in carefully constructed units designed to protect groundwater and surface-water resources.

Detailed regulations to ensure that TSDFs operate safely and protect human health and the environment are found in Tennessee Rule 0400-12-01-.06 and .07. Facilities that currently or plan to treat, store, or dispose of hazardous wastes must obtain a RCRA permit. A RCRA permit is a legally binding document that establishes operating requirements and various provisions specific to the needs of the permit applicant depending on the treatment, storage, or disposal activities conducted at the facility. Permits are written to address the specific geography of the facility, the types of hazardous waste management units, and the specific waste streams that will be managed at the facility. The permit also outlines facility design and operation, lays out safety standards, and describes activities that the facility must perform, such as monitoring and reporting. Permits typically require facilities to develop emergency plans, obtain insurance and financial backing, and train employees to handle hazards and can include facility-specific requirements such as groundwater monitoring.

How the data is collected:

Handlers of hazardous waste are required to notify the state of their activity pursuant to the HAZARDOUS WASTE MANAGEMENT REGULATIONS CHAPTER 0400-12-01. Forms are sent to these entities annually requiring each handler to report on their hazardous waste activity. Completed forms are required to be submitted by March 1st of each year detailing their hazardous waste activity for the previous calendar year, frequently referred to as the “Report Year”.

Forms received on March 1st contain information from the previous year. For example, data for calendar year 2016 is received by March 1, 2017 (Fig. 1). Corrections and resubmission may be required by the reporting entity. Reporting of data to EPA is also required. Handler information (site location, name, etc) is entered into EPA’s data system (RCRAInfo) by the Waste Activity Audit staff. Certain waste handling data is extracted from these annual reports and uploaded to EPA as part of the Biennial Reporting System (BRS).

START OF DATA PERIOD	END OF DATA PERIOD	MUST BE POSTMARKED BY	AUDIT AND DATA ENTRY
January 1, 2016	December 31, 2016	March 1, 2017	Summer or Fall of 2017

Understanding Reporting Cycles:

Figure 2 indicates the overlapping nature of reporting cycles. Data in this report is based on the “Report Year” scenario outlined in Figure 1.

Figure 2 - REPORT YEAR 2016 - Overlapping Cycles

CALENDAR CYCLE		TN FISCAL YEAR		FEDERAL FISCAL YEAR	
BEGINS	ENDS	BEGINS	ENDS	BEGINS	ENDS
January 1, 2016	December 31, 2016	July 1, 2015	June 30, 2016	October 1, 2015	September 30, 2016

BIENNIAL DATA is reported to EPA every two years based on odd-ending years. Data is for one year only and based on the REPORT YEAR. Data for the BIENNIAL report is usually due to EPA in late June or early July following the REPORTING YEAR.

FEDERAL FISCAL YEAR reporting generally involves Compliance Monitoring and Enforcement (CME) data. EPA determines Tennessee’s adherence to the RCRA Program based on how many inspections are conducted and the numbers of enforcement actions in any FEDERAL FISCAL YEAR.

Quantity of Data Managed:

Hazardous waste must be managed from generation to disposal or “cradle-to-grave”. Once a hazardous waste is generated, the generator must be able to identify the points of generation, the amount of time the waste was accumulated and to whom the waste was given to be transported to a treatment or disposal facility. These data are reported annually on forms to the Department. Submitted forms are required to be permanently retained. Figure 3 details this tracking of waste in general terms. Figure 4 identifies required forms to be submitted to the Department and the number of records (potentially) that may be submitted.

Quantity of Data Managed (continued):**Figure 3 - Data Management / Tracking from Generation to Treatment / Disposal**

	Waste Stream 2	Amt Generated 2	Amt Shipped 2		Amt Treated / Disposed 2
	Waste Stream 3	Amt Generated 3	Amt Shipped 3		Amt Treated / Disposed 3

Several pages of forms are returned from the regulated sites. Figure 4 indicates the estimated total of pages returned. Note that in some cases, several records can be placed on one form as in Form TWR(CN-0905). At one point in the past, there were over 32,000 records submitted by Treatment, Storage, Disposal(TSD) sites.

REGULATED ENTITIES

Descriptions of Regulated Entities:

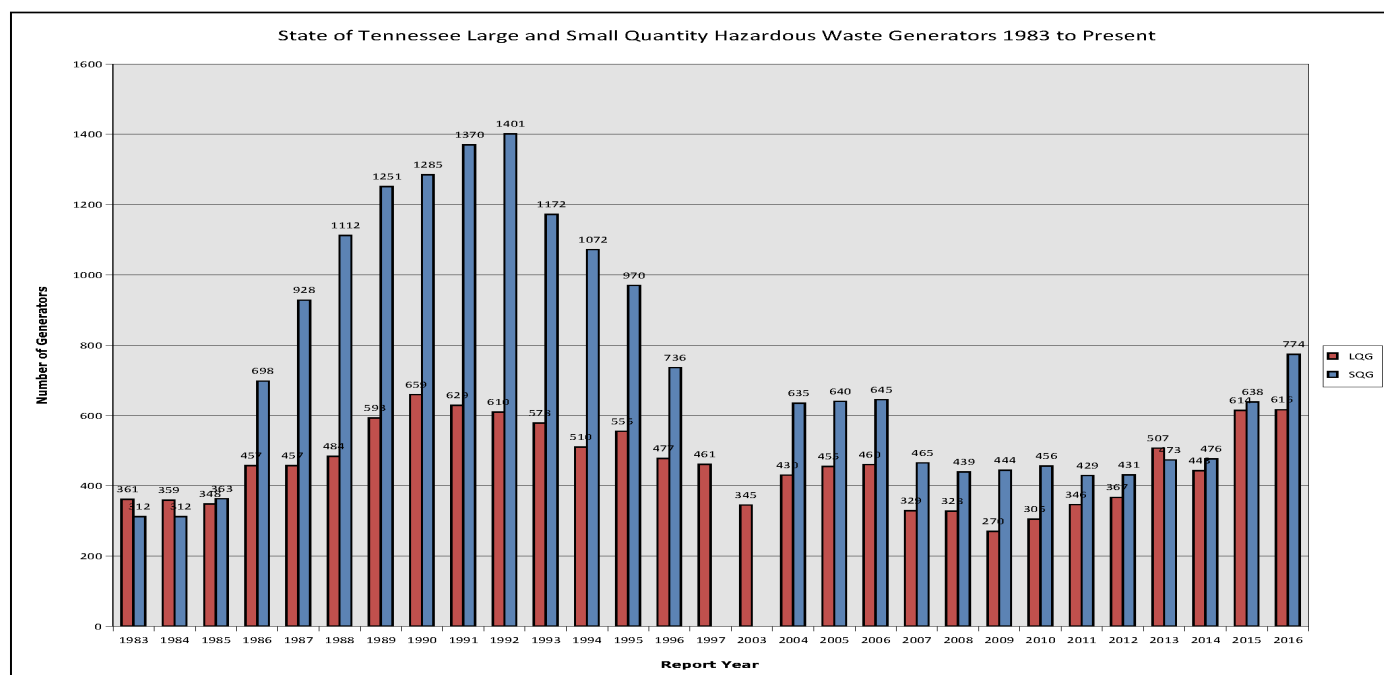

The Tennessee Hazardous Waste Management Act of 1977, TCA Section 68-212-101, requires the Division of Solid Waste Management to identify and regulate Hazardous Waste Generators, Hazardous Waste Treatment Storage and Disposal Facilities (TSDF), and Hazardous Waste Transporters. Hazardous Waste Generators are categorized into three groups: Large Quantity Generators (LQG); Small Quantity Generators (SQG); and Conditionally Exempt Small Quantity Generators (CESQG). Conditions for determination of these generator statuses are listed in Figure 7.

Description of Regulated Entities (Continued)

Hazardous Waste Transporters

Transporters of hazardous waste are required to obtain a permit if they drop off or pick up hazardous waste in the State of Tennessee. TDEC permits and tracks both in state and out of state transporters as long as they operate or reside in Tennessee. Note in Figure 8 that one category of transporter resides in Tennessee but operates elsewhere. Other states require an EPA ID for such a transporter (just as Tennessee requires out of state transporters to have an EPA ID from their home state). An effort is made to check transporters against other databases, particularly US DOT web sites.

<i>*THE STATE WHERE THE TRANSPORTER INTENDS TO OPERATE MAY REQUIRE A PERMIT</i>							

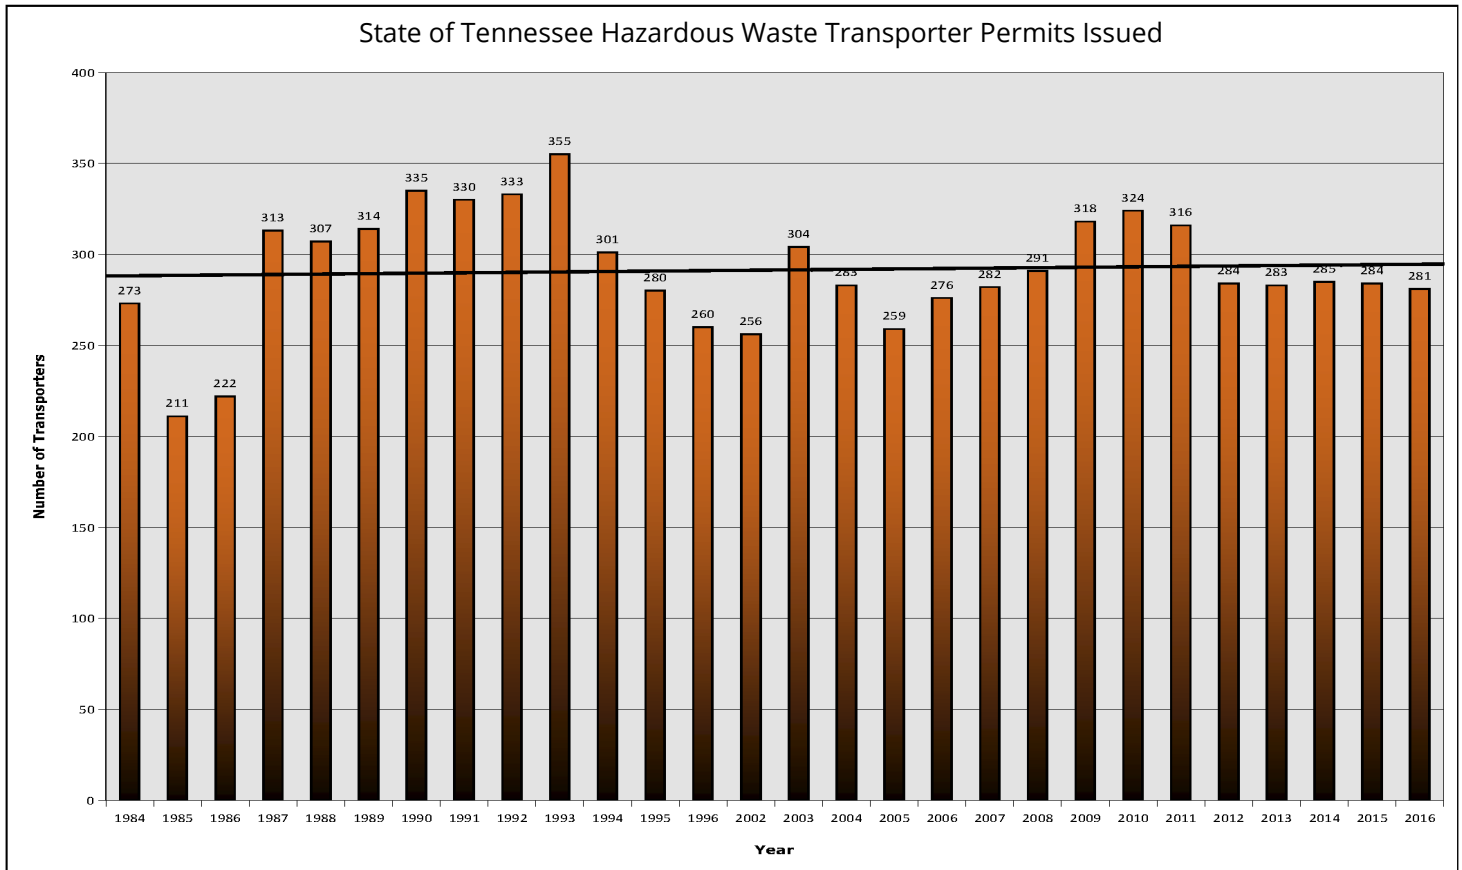

The universe of hazardous waste transporters has not changed much throughout the years of this program. See Graph - State of Tennessee Hazardous Waste Transporter Permits Issued (Fig 9). A quick check of this graphical representation indicates Tennessee has consistently permitted about 300 hazardous waste transporters each year since 1984.

Transporter permits expire each year on January 31. Permit Renewal Notifications are sent to transporters each year around December 1 with a notice that the applications for renewal are due back to TDEC at the end of December. This allows for a month of overlap in permit re-issuance and permit expiration. This has been an effective process. New transporters are advised that their permits expire at the end of January, regardless of date of issuance. A transporter who applies for a new permit in October will have to re-apply in December when the Permit Renewal Notifications are sent out. Revenue collection for Annual Maintenance (permit) fees and application fees together have ranged from \$65,000 to \$75,000 annually since the inception of the program.

Hazardous Waste Transfer Facilities

A comprehensive fee study was conducted in 2010 which resulted in the creation of new fees for several regulated entities. Hazardous Waste Transfer Facilities are now required to pay an annual fee of \$850. This fee is due each year on or before December 31. The total number of registered facilities is about 30.

WASTE GENERATION

Figure 10 - Percent Change in Generation

The Tennessee General Assembly passed the Hazardous Waste Reduction Act in 1990. The Act required large quantity generators to prepare detailed hazardous waste reduction plans for their facilities by January 1, 1992. By March 1, 1993, these generators were to report on their implementation progress in the Report Year 1992 Hazardous Waste Annual Report submission. The Act also required small quantity generators to write similar plans by January 1, 1994, and to report their implementation efforts by March 1, 1995. A voluntary goal of 25% reduction in the generation of hazardous waste was set by the Act.

WASTE REDUCTION

Figure 14 - Waste Reduction Efforts

Waste reduction (efforts) responses are further defined:

Effort Code	General Description	Expanded
a	Reformulation/redesign of product	An effort to reduce hazardous waste generation based on changes in design, composition, or specifications of end products that allow fundamental changes in its production.
b	In-process recycling/process modification	An effort to reduce hazardous waste generation based on the redesign of the procedures of a generation process to reduce, reuse or recycle waste as an integral part of the process
c	Equipment/technology modification	An effort to reduce hazardous waste generation based on the redesign, retrofitting or change in equipment or incorporation of a technology to reduce the volume or toxicity of the waste.
d	Substituting raw materials	An effort to reduce hazardous waste generation based on changes in raw materials to reduce volume and toxicity
e	Improved operations	An effort to reduce hazardous waste generation based on improvement in employee training, equipment maintenance, handling of raw materials, detection and control of emissions, etc.
f	Reduction research/planning	An effort to reduce hazardous waste generation based on research or planning conducted to develop future specific waste reduction efforts.
g	No effort	
h	Other	

Figure 15 - Waste Reduction Impediments

Waste reduction (impediments) responses are further defined:

Impediment Code	Description	Expanded
a	Training or technical assistance	Reason given by respondents as an impediment to reducing hazardous waste generation based on funding and applicability for training and availability of staff time
b	Technical feasibility	Reason given by respondents as an impediment to reducing hazardous waste generation based on problems with reformulation or redesign of a product; in-process recycling or equipment modification etc.
c	Economic practicality	Reason given by respondents as an impediment to reducing hazardous waste generation based on recovery of cost of changing a process or availability of capital versus ability to recover the investment
d	Measurement/accounting	Reason given by respondents as an impediment to reducing hazardous waste generation based on ability to consistently and accurately measure generation amounts to identify direct and indirect costs
e	Tennessee hazardous waste regulations	Reason given by respondents as an impediment to reducing hazardous waste generation based on burdens imposed by regulations that impede flexibility to use reduction efforts
f	Implementation Previous Efforts	Reason given by respondents as an impediment to reducing hazardous waste generation based on feedback from previous reduction efforts
g	High costs of HW management	Reason given by respondents as an impediment to reducing hazardous waste generation based on the expense of transportation, on site handling as well as cost of insurance
h	Accidental generation	Reason given by respondents as an impediment to reducing hazardous waste generation due to an unplanned generation event, spill etc.
i	Other	Some responses given: "Waste Generation Was Based on Sales"; "This is an Insignificant Waste Stream"; "Cannot Control the Product Design of Our Customers"; "One Time Generation Due to Flood"; "Cannot Reduce Waste Generation Any Further"
