## Connect America Fund Phase II Auction (Auction 903) — Eligible Census Blocks

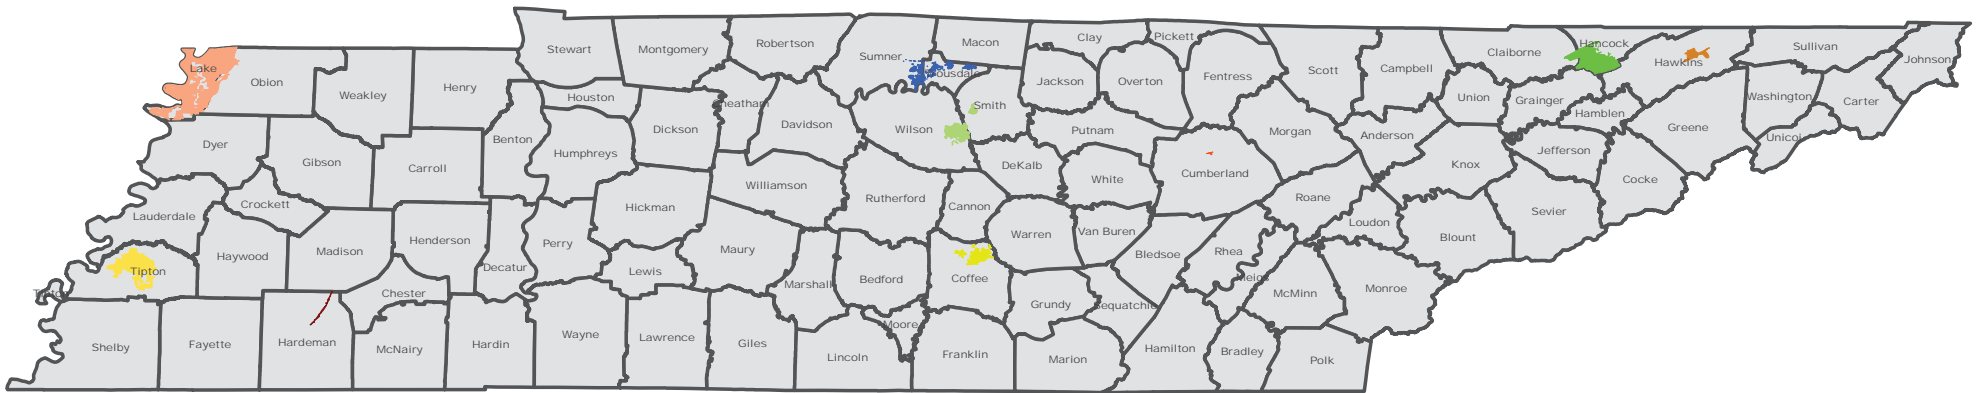

The Auction: The Connect America Fund Phase II Auction (Auction 903) will use competitive bidding to award up to \$1.98 billion of universal service support over 10 years to areas currently unserved by broadband.

The FCC made eligible for the Phase II auction census blocks in states where price cap carriers declined the offer of model-based support, extremely high-cost census blocks nationwide (excluding NY, AK, PR, VI), and certain other census blocks that were removed from the offer of model-based support. To remain eligible, a census block cannot be served with voice and broadband of at least 10/1 Mbps (based on Form 477 data) by an unsubsidized competitor or price cap carrier. The final list and map of eligible census blocks were released on February 8, 2018. This information, based on the most recent publicly available FCC Form 477 data (as of December 31, 2016), supersedes the preliminary list and map of eligible census blocks that were previously released. See <https://www.fcc.gov/auction/903> for more information.
