Preliminary Timing Report

INTRODUCTION

This document describes the development of preliminary timing plans for twelve (12) intersections along SR-2 (Congress Parkway) and SR-30 (Decatur Pike) in the City of Athens, TN. The intersections are listed in **Table 1 and shown in Figure 1**. Note that the offset T-intersections of Congress Pkwy with Rocky Mountain Rd East and Rocky Mountain Rd West operate as one signalized intersection.

The purpose of this traffic signal optimization analysis is to enhance operation and reduce the delay across the system. Phasing and timing plans recommended in this report will be implemented in the field and evaluated based on field observations and results of before and after travel time data. Additional adjustments to timings made in the field following implementation will be documented.

Table 1: Project Intersections

#	Intersection	Jurisdiction
1	SR-2 Congress Pkwy @ Rocky Mountain Rd W	City of Athens
2	SR 2-Congress Pkwy @ Rocky Mountain Rd E	City of Athens
3	SR 2-Congress Pkwy @ Dennis St	City of Athens
4	SR 2-Congress Pkwy @ Lowe's	City of Athens
5	SR 2-Congress Pkwy @ Layman Rd	City of Athens

12	SR-30 Decatur Pk @ Maple St	City of Athens

Figure 1: Location Map

Preliminary Timing Report

INVENTORY

AECOM staff completed an inventory of each of the Corridor 1 intersections. Information obtained consists of the intersection configuration, signing and marking configurations, signal phasing, pedestrian crossing dimensions, communication status, and detector status.

TRAFFIC COUNTS

Turning movement counts were collected during weekday AM, weekday midday, and weekday PM periods at the study intersections, shown previously in **Table 1**. Turning movement count data and calculated peak hour information is included in **Appendix A**.

LOCAL CONTROLLER TIMING PARAMETERS

Local controller timings were developed for each of the Corridor 1 intersections. **Table 2** details the methods used to develop the controller values that will be used for each intersection. Clearance calculations for each intersection are shown in **Appendix B**. Note that per new MUTCD standards, yellow and red clearance times are calculated for each intersection based on the travel speed, grade, and intersection width. Such methodology often results in longer clearance times than previous MUTCD recommendations.

Table 2: Local Timing Parameters

Parameter	Value	
PEDESTRIAN INTERVAL		
Pedestrian Change Interval	$(\text{Curb to Curb Distance}) / (\text{Walking Speed})$	
Walking Speed	3.5 Feet per Second	
Walk	4 - 7 Seconds	
Buffer Interval	Following the pedestrian change interval, a buffer interval consisting of a steady UPRAISED HAND (symbolizing DON'T WALK) signal indication shall be displayed for at least 3 seconds prior to the release of any conflicting vehicular movement.	
VEHICLE INTERVAL		
Yellow Interval	$t + (V / (2A + 64.4g))$ Minimum of 3 seconds Left turn clearance calculations should be based	t = perception reaction time (1 second) V = posted speed in feet/second (25 mph for left turn clearances) A = deceleration rate (10 feet/second/second) W = intersection width measured from stop bar to far edge of last conflict lane (or crosswalk when the crosswalk is greater than 20' from the intersection) L = length of vehicle (assume 20 feet) g = The average of two field measured approach grades: <ul style="list-style-type: none"> • At the stop bar • At the setback loop (if present) n = detection distance / 20 N = number of lanes
All Red Interval	$(W + L) / V$ Minimum of 1.5 seconds. If greater than 3 seconds, additional time should be added to Yellow clearance	
Minimum Green	Main Street (12 seconds) Side Street (6 seconds) Left Turn (5 seconds)	
Minimum Cycle Length	Cover critical intersection	
Maximum Cycle Length	Cover critical intersection with minimum delay	
Offset Reference	Beginning of Yellow	
Offset Seeking	Short Way	
Free Operation	Isolated signals or as needed, based on counts, on coordinated systems (at least 9 pm to 6 am).	
Lead/Lag by Time of Day	Yes, protected locations with prior approval	
Traffic Responsive Operation	No	
Special Events	No	

Preliminary Timing Report

TIME OF DAY SCHEDULE

The objective of the proposed signal timing is to minimize delay for all vehicles within the system and to provide improved mainline progression while minimizing side street delay. The system cycle lengths were selected to service the most critical intersection which is SR-2 Congress Pkwy at SR-30 Decatur Pk.

The corridor consists of twelve intersections which serve numerous commercial establishments, residential areas schools and large employment bases.

The turning movement count inventory data was entered into Synchro using the following guidelines:

- All movements were coded as they appear in the field.
- Signing and marking restrictions were coded as they appear in the field.
- A saturated flow rate of 1,900 vehicles per hour was used.
- Posted speed limits were used for progression speeds.

**TABLE 3:
Existing Time-of-Day/Day-of-Week Schedule**

Day	Day of Week	HH:MM (Start Time)	C/S/O	Cycle (Sec)	Directional Bias
Int 1 & 2 – Congress Pkwy from Rocky Mountain Rd W to Rocky Mountain Rd E					
1 & 7	Sunday/Saturday	00:01	0/0/4	Free	-

2 - 6	Monday - Friday	00:01	0/0/4	Free	-
2 - 6	Monday - Friday	06:30	1/1/1	90	Balanced
2 - 6	Monday - Friday	08:30	0/0/4	Free	-
2 - 6	Monday - Friday	15:00	1/1/1	90	Balanced

Preliminary Timing Report

Multiple runs of Synchro were completed to determine the most appropriate combination of cycle, split, and offset (C/S/O) for each signal in the system. The existing time of day schedule was not consistent across the corridor. **Table 3** shows the existing time of day schedule for each intersection. Based on the Synchro analyses, it was determined that coordination all of the signals with one cycle length will maximize operations. **Table 4** shows the proposed time of day schedule.

**TABLE 4:
Proposed Time-of-Day/Day-of-Week Schedule**

Day	Day of Week	HH:MM (Start Time)	C/S/O	Cycle (Sec)	Directional Bias
Int 1 – 12 Congress Pkwy from Rocky Mountain Rd W to Velma Rd and Decatur Pk from Dennis St to Maple St					
1	Sunday/Saturday	00:01	0/0/4	Free	-
1	Sunday/Saturday	9:00	2/1/1	100	Balanced
1	Sunday/Saturday	11:00	2/2/1	120	Balanced
1	Sunday/Saturday	15:00	2/1/1	100	Balanced
2 - 6	Monday - Friday	00:01	0/0/4	Free	-
2 - 6	Monday - Friday	6:30	1/1/1	120	Balanced

2 - 6	Monday - Friday	18:30	2/1/1	100	Balanced
2 - 6	Monday - Friday	22:00	0/0/4	Free	-

TIMING PLANS

Travel patterns along Congress Pkwy and Decatur Pk were relatively balanced in both directions each day. Timing plan offsets were optimized to favor both directions of travel with continuous bands through the corridor in both directions. Synchro Timing Reports for each of the plans described below are included in **Appendix C** and the Time space diagrams showing the progress are included in **Appendix D**.

1/1/1 AM Plan 120 Sec Cycle – This plan will operate during the AM peak period from 6:30 am to 8:30 am. It consists of balanced progression with emphasis on handling the turning movement at the major intersection, Congress Pkwy at Decatur Pk.

1/2/1 AM Plan 90 Sec Cycle – This plan is an alternate to the main 1/1/1 AM plan. It consists of operating some of the smaller intersections along the corridors at a lower cycle length. If utilized it would not operate at the intersection of Congress Pkwy at Decatur Pk, since it cannot operate such a small cycle length with regular traffic volumes. This plan is also a balanced progression plan and is intended to reduce the side street delay.

2/1/1 Off Peak 100 Sec Cycle – This plan will operate during the lower volume portion of the midday from 8:30 am to 11:00 am as well as in the evenings from 6:30 pm to 8:30 pm. It consists of balanced progression with emphasis on handling the turning movement at the major intersection, Congress Pkwy at Decatur Pk. This plan will also operate on weekends during the non-peak periods.

Preliminary Timing Report

2/2/1 Midday 120 Sec Cycle – This plan will operate during the midday time from 11:00 am to 3:00 pm. It consists of balanced progression with emphasis on handling the turning movement at the major intersection, Congress Pkwy at Decatur Pk. This plan will also operate on weekends during the peak periods.

2/3/1 School Dismissal Plan 120 Sec Cycle – This plan will operate during the Thomas and Betts let out and school dismissal time period from 3:00 pm to 4:00 PM. It was observed that a heavier westbound split is need at Congress Pkwy at Dennis St for Thomas and Betts as well as a northbound progression along Congress Pkwy for McMinn County High School.

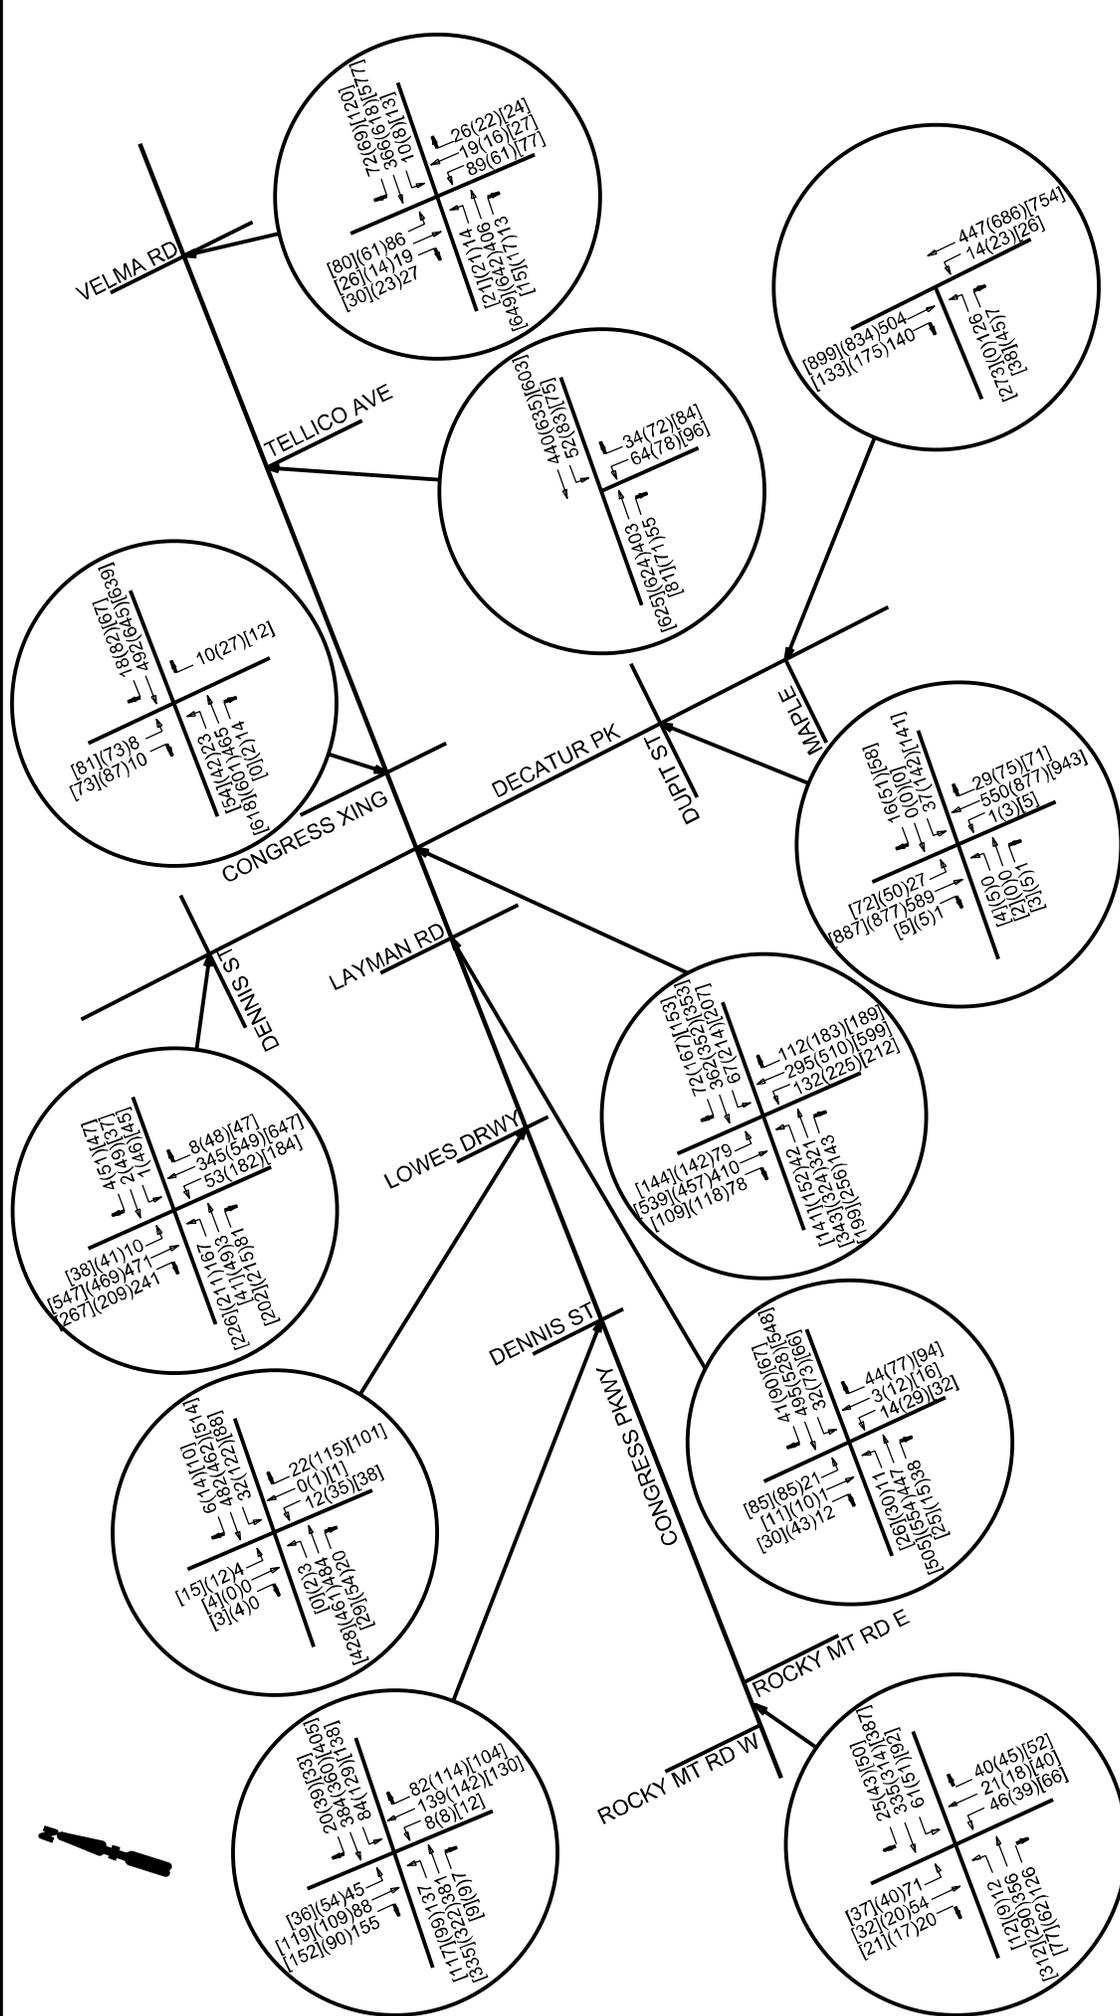

3/1/1 PM 120 Sec Cycle – This plan will operate during the PM peak period from 4:00 pm to 6:30 pm. It consists of balanced progression with emphasis on handling the turning movement at the major intersection, Congress Pkwy at Decatur Pk.

3/2/1 PM 140 Sec Cycle – This plan is an alternate PM peak plan in case the 120 sec cycle length cannot handle the traffic at the major intersection Congress Pkwy at Decatur Pk. This plan can also be utilized in conjunction with plan 3/1/1 to operate during the peak hour of the PM to handle the rush of traffic, then the 3/1/1 plan can operate during the fringe portion of the PM period.

At some locations, there are different signal timing options which may enhance the flow of traffic. These options include a lead-lag optimization at both Congress Pkwy at Decatur Pk and at Decatur Pk at Dennis Street. The use of half-cycles will be considered for some of the minor intersection on the edges of the system such as at Decatur Pk at both Dupit Street and Maple St, and at Congress Pkwy at both Rocky Mountain Rd East and Rocky Mountain Rd West.
