

Health Care Innovation Initiative

Provider Stakeholder Group March 23, 2016

1

Official Name-Tennessee Health Link

- Updated PCMH and Health Link launch timelines
- Wave 5 Episodes of Care
- State SIM Population Health Improvement Meeting

Tennessee Health Link

- The Health Home program is now named **Tennessee Health Link**
- This name change has several objectives:
 - To avoid confusion with other existing programs and institutions in the Tennessee health care landscape, such as nursing homes and home health agencies
 - **To distinguish the program** from Health Home models in other States which target different populations and have different approaches
 - To make clear to the broader public the crucial coordinating role each Health Link will play, as they connect patients to key clinical and non-clinical services, and bring a variety of providers together to better serve these patients

State SIM Population Health Improvement Meeting

SIM All Schools Meeting

- 5 public health schools drafted regional population health improvement plans for one of the 5 health topics in one of the 8 major health regions (and 5 of the 6 metro areas).
 - Process included quantitative analysis, community focus groups, key informant interview, and grassroots engagement of local stakeholders.

TN

SIM All Schools Meeting

- The main goal of this meeting was for schools to get peer review and feedback on their regional goals, and for TDH to get a better idea of how to most effectively scale those goals and recommendations statewide.
- Day 1- Schools presented regional plans, goals and recommendations to an audience of subject matter experts from TDH, local health department, TennCare, and DOE.
- Day 2 Attendees participated in small group breakouts on each topic to discuss state-wide scalability of each school's regional goals and recommendations.

Themes - Engagement

- Local engagement in development and implementation is necessary in many areas.
- Frame discussions to incentivize stakeholders appropriately.
 - Focus on cost-savings or other key topics to get groups on board and engaged.
 - Show them why they, specifically, have a stake in the health of their community in order to get their buy in.
- Partner with the business community.
 - Make sure they understand that they *do* have a vested interest in community health (both workforce and patrons).

Themes – Programs

- Enforce existing programs.
- Evaluation is key.
 - Effectiveness of current programs
 - Build in evaluation plans for new programs
- Use public health as a convener to leverage other resources.
- Would love an easily accessible repository of evidence-based best practices that local communities/departments can use as a starting point.
 - Include both federal, state, and local programs as well as programs from sister states.
- There's a lot of crossover and alignment of goals across health topics.
 - Leverage this to make a bigger impact using fewer, more targeted interventions.

Themes – People

- Empower individuals to make changes themselves.
 - Educate them on small skills for self-management.
 - Teach them to set small, achievable goals to build confidence.
- Reach parents/family/friends, not just the patient.
- Explore new, unique mediums and approaches for education to reach your population.
 - Focus on positive messaging and building health instead of condemning unhealthy behaviors
 - Go to people where they are use the community as it exists already.
- Address underlying behavioral health problems that may drive these secondary health issues.
- Help people "map the gap" from where they are to where they want to go.

State Population Health Improvement Plan

- Next, we will draft a statewide population improvement plan addressing all 5 priority health topics incorporating the work and feedback from schools and subject matter experts.
- Then, we will conduct 9 public forums across the state (one in each US Congressional district) to gather additional feedback, and solicit stakeholder endorsements.
- Finally, we will incorporate feedback into a final draft which will be submitted to the Governor as the 2015 Update to the State Health Plan in July.
