# South Fork of the Forked Deer River Conservation Opportunity Area

The South Fork of the Forked Deer River is comprised of the typical bottomland hardwood/wetland habitat found in West Tennessee, with some agricultural lands found near the river. This river system is the main drainage of the central portion of West Tennessee. Historically, much of the Forked Deer basin contained wetlands that were used by Native Americans and early settlers as hunting and fishing grounds. However, much of this area has been drained, and most of the tributaries of the Forked Deer have been channelized, impacting aquatic habitat structure, riparian vegetation, and water quality.

The bottomland hardwood/wetland areas found along the South Fork of the Forked Deer River are some of Tennessee's richest in biological diversity, with over 160 species. This area supports populations of nongame species such as Alligator Gar, Chickasaw Darter, Mississippi Kite, Barking Treefrog, and plant species such as the whorled sunflower. The Forked Deer River was also the site for three past species restoration projects (Alligator Gar, Mississippi Kite, and Alligator Snapping Turtle).

TWRA will consider future land acquisitions in this COA for watershed protection, critical habitat protection, habitat restoration, streambank stabilization, planting of bottomland hardwoods and warm season grasses, and planting buffer strips along the river to improve water quality. TWRA will also seek partnerships with other agencies and landowners to implement many of the management strategies on private lands within the COA.

### Public Lands within the COA

Col. Forrest V. Durand Wetland, Fort Ridge Wetland, Jackson Sand Wetland, Perry Switch Wetland, Pinson Mounds State Park, South Fork Waterfowl Refuge

The South Fork of the Forked Deer River system is the main drainage of the central portion of West Tennessee.

## South Fork of the Forked Deer River Conservation Opportunity Area

## Partnerships

TWRA will develop and foster partnerships with the US Fish & Wildlife Service, Tennessee Department of Environment and Conservation, Natural Resources Conservation Service, Farm Bureau, Tennessee Department of Forestry, The Nature Conservancy, National Wild Turkey Federation, Ducks Unlimited, UT Agricultural Extension, Cooperative Extensions, universities, various other institutions, and local governments.

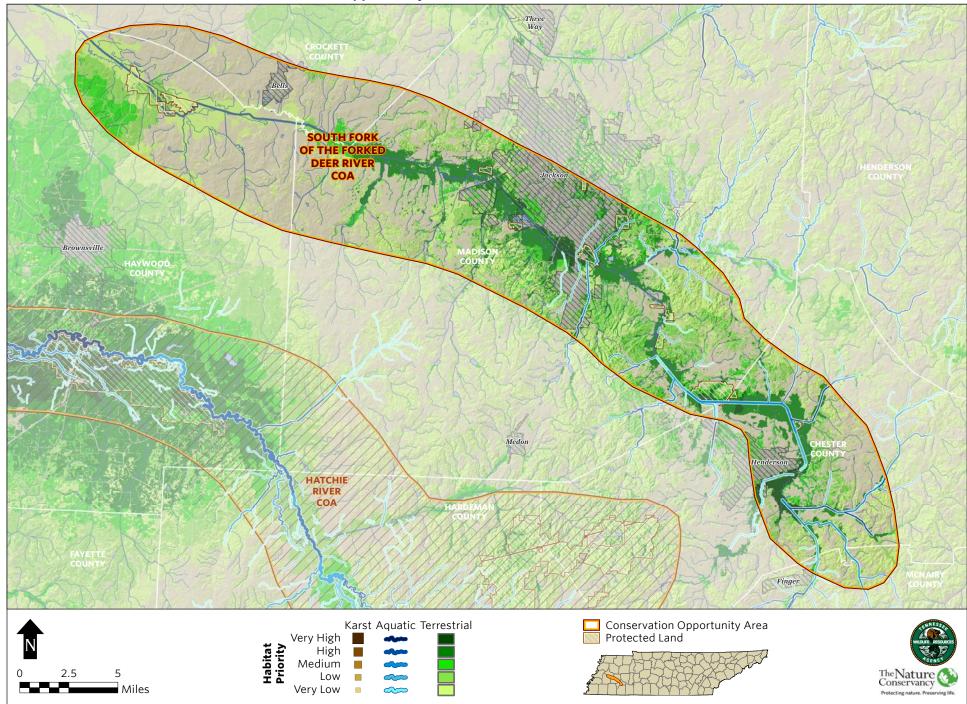

| Desired Change   | Units        |
|--|--------------|
| Increase the application of Best Management Practices to benefit GCN species and habitats private lands using government funded incentive programs                           | s on number  |
| Restore acres of bottomland hardwood forest by converting former agriculture lands.  | acres        |
| Restore river cane corridors.  | acres        |
| <ul> <li>Create or improve buffers around tributaries to reduce sediment transfer and runoff of contaminants.</li> </ul>   | acres        |
| ➡ Increase mudflat and moist soil habitat on wildlife refuges through enhanced water manage to provide habitat for migrating birds and Mississippi kites                     | gement acres |
| Protect existing riparian zones and bottomland hardwood forests.   | acres        |
| Encourage municipal and county governments to adopt zoning ordinances that limit or readevelopment within critical units of aquatic, subterranean, and terrestrial habitats. | gulate plans |
