## PREFACE

The Commissioner of the Department of Environment and Conservation and the Solid Waste Disposal Control Board hereby submit this report on behalf of the State of Tennessee's Hazardous Waste Regulatory Program.

### How the data is collected.

Handlers of hazardous waste are required to notify of their activity pursuant to the HAZARDOUS WASTE MANAGEMENT REGULATIONS CHAPTER 0400-12-01. Forms are sent to these entities annually requiring each handler to report on their hazardous waste activity. These forms are required to be submitted by March 1st of each year detailing their hazardous waste activity for the previous calendar year, frequently referred to as the report year.

### How the data is managed.

Forms received on March 1st contain information from the previous year. After the data is carefully audited, it is entered into a data system which takes a fair amount of time. Consequently, data for calendar year 2010 is received by March 1, 2011 (See Fig. 1) and with corrections submitted by the reporting entity, still a longer period of final data entry and analysis can be expected. Making matters more difficult, federal reporting of the data to EPA is required. Real time handler information is keyed by Waste Activity Auditors into a federal system known as RCRAInfo. As well, biennial data\* regarding waste activity must be supplied to EPA via another mechanism. Nonetheless, the data is vital for understanding and monitoring the program.

**FIGURE 1 - - REPORT YEAR 2010 (based on calendar year 2010)**

START	END	MUST BE POSTMARKED BY	AUDITED and DATA ENTERED
January 1, 2010	December 31, 2010	March 1, 2011	Summer or Fall of 2011

### Understanding the reporting cycles:

Other cycles of reporting complicate the issue but still need clarification here. Figure 2 indicates the overlapping nature of reporting cycles due to differences in fiscal years. As much as possible, data in this report is made available on the "Report Year" scenario outlined in Figure 1, however, it is not always possible to do this. Where practical, data outside the REPORTING YEAR parameters are so identified.

**FIGURE 2 - - REPORT YEAR 2010 Overlapping Fiscal Year Cycles**

CALENDAR CYCLE		TN FISCAL YR		FEDERAL FISCAL YEAR**	
BEGINS	ENDS	BEGINS	ENDS	BEGINS	ENDS
January 1, 2010	December 31, 2010	July 1, 2009	June 30, 2010	October 1, 2009	September 30, 2010

\*BIENNIAL DATA is reported to EPA every two years - based on odd-ending years. The data is for one year only and is based on the REPORT YEAR. Data for the BIENNIAL report is usually due to EPA in late June or early July following the REPORTING YEAR.

\*\*FEDERAL FISCAL YEAR reporting generally involves CME or Compliance, Monitoring, and Enforcement Data. EPA determines Tennessee's adherence to the RCRA Program based on how many inspections and enforcement cases, etc are reported for the FEDERAL FISCAL YEAR.

NOTICE: In some cases, graphical data contains information for years beyond the Report Year identified in the headings of each page. This data is likely incomplete and should not be interpreted until a report for that year has been made available.

**PREFACE (continued)**

**Quantity of data managed.**

The very concept of the Hazardous Waste Program is to identify generated wastes and to account for the whereabouts of that waste including where and how it was disposed and who hauled it to the disposal facility. This "cradle-to-grave" concept has its challenges in the quantity of data managed. Figure 4 details this tracking of data in general terms.

**Figure 3 - - Data Management / Tracking from Generation to Disposal**

Waste Stream 1	Amount Generated 1	Amount Shipped 1	Amount Treated / Disposed 1
Facility ⇒ Waste Stream 2 ⇒	Amount Generated 2 ⇒	Amount Shipped 2 ⇒	Transporter ⇒ Amount Treated / Disposed 2
Waste Stream 3	Amount Generated 3	Amount Shipped 3	Amount Treated / Disposed 3

Several pages of forms are returned from the regulated sites. Figure 4 indicates the estimated total of pages returned. Note that in some cases, several records can be placed on one form as in Form TWR. At one point in the past, there were over 32,000 records submitted by TSD sites. Each shipment received on Form TWR is considered a record. The same logic applies to Form OSR except one record represents one shipment shipped off site.

**FIGURE 4 - - REPORT YEAR 2010 Estimated Number of Forms Returned**

Information	Form ID	Records per Facility	Estimated Total Sites	Estimated Total
Facility Core Data    Location, Contact Persons	Form HN-H	1	3000	3000
Waste Stream        Description and Amounts	Form WSR	1 to 1,200	3000	10,600
Offsite Shipping    Shipments and Amounts	Form OSR	1 to 50	3000	2500
Total Waste Received    Shipments and Amounts	Form TWR	1 to 20,000	25	10,000

Data for this and other hazardous waste reports comes from multiple unrelated sources (Fig. 5). No single database currently connects the various processes. The most critical need is to be able to see and manage fiscal data. Currently, Waste Auditors and the field staff cannot see if a customer has been billed, if they have paid or if an account is outstanding. This lack of visibility poses great limitations to the functionality of the program.

\*Perhaps the greatest feature of TenWaste. Though networked in a shared environment, TenWaste is NOT web based. Its ability to generate forms and reports for multiple mailings has been a valuable tool since its inception in 2000. TenWaste has supported EPA's Biennial Report for the last 15 years.

⇒ **Description of Regulated Persons, Fees, Permits**

The Tennessee Hazardous Waste Management Act of 1977, TCA Section 68-212-101, requires the Division of Solid Waste Management to identify and regulate:

Hazardous Waste Generators

Hazardous Waste Transporters

Hazardous Waste Treatment Storage and Disposal Facilities (TSDF)

⇒ **Graphical Representation of Regulated Generators**

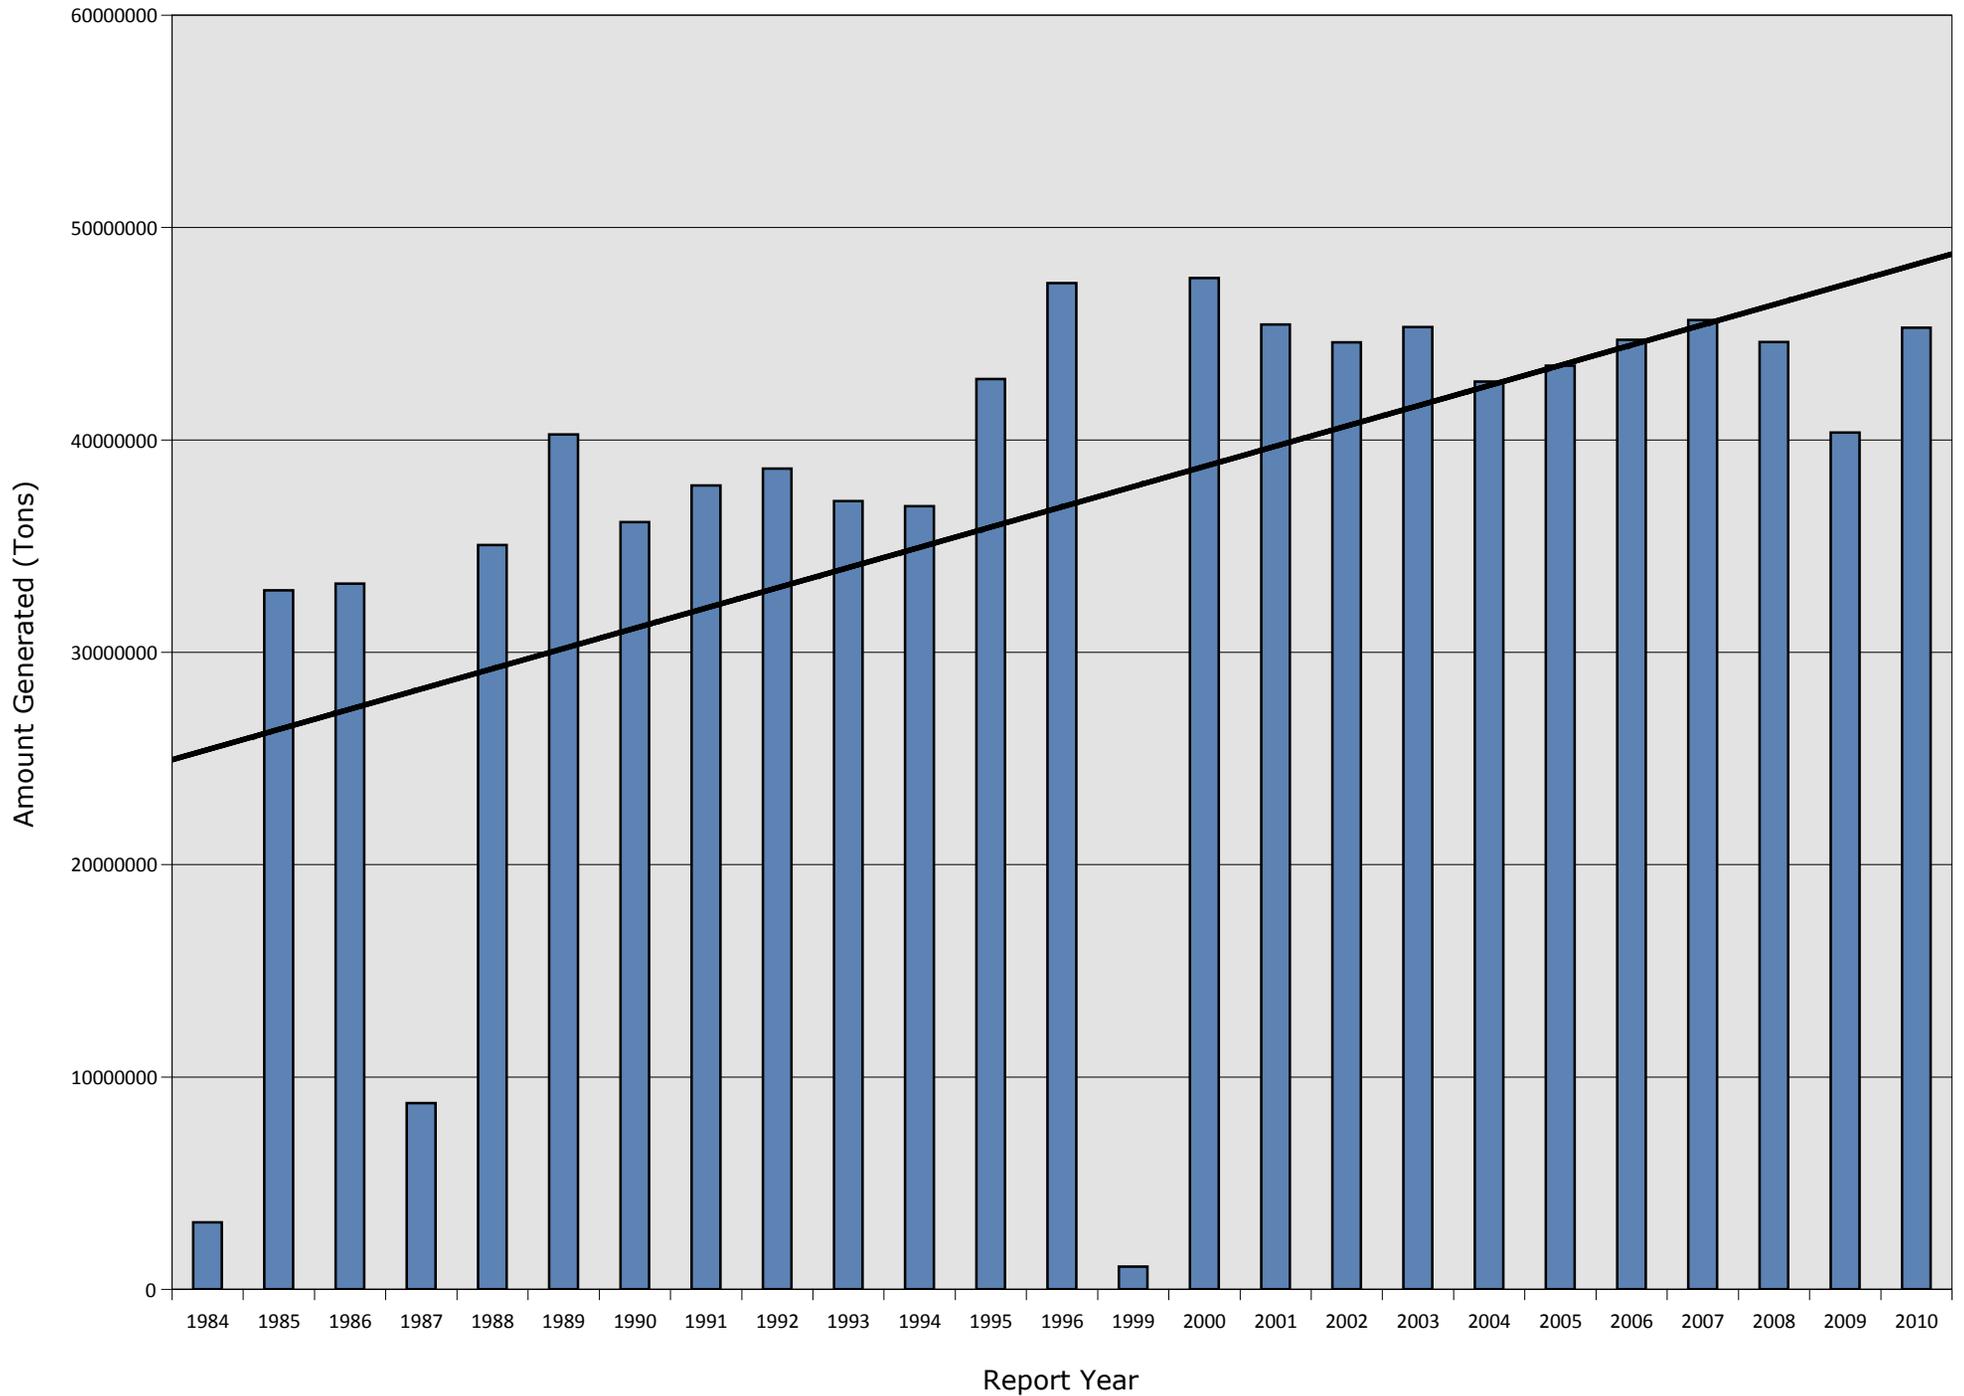

See accompanying Graph entitled:

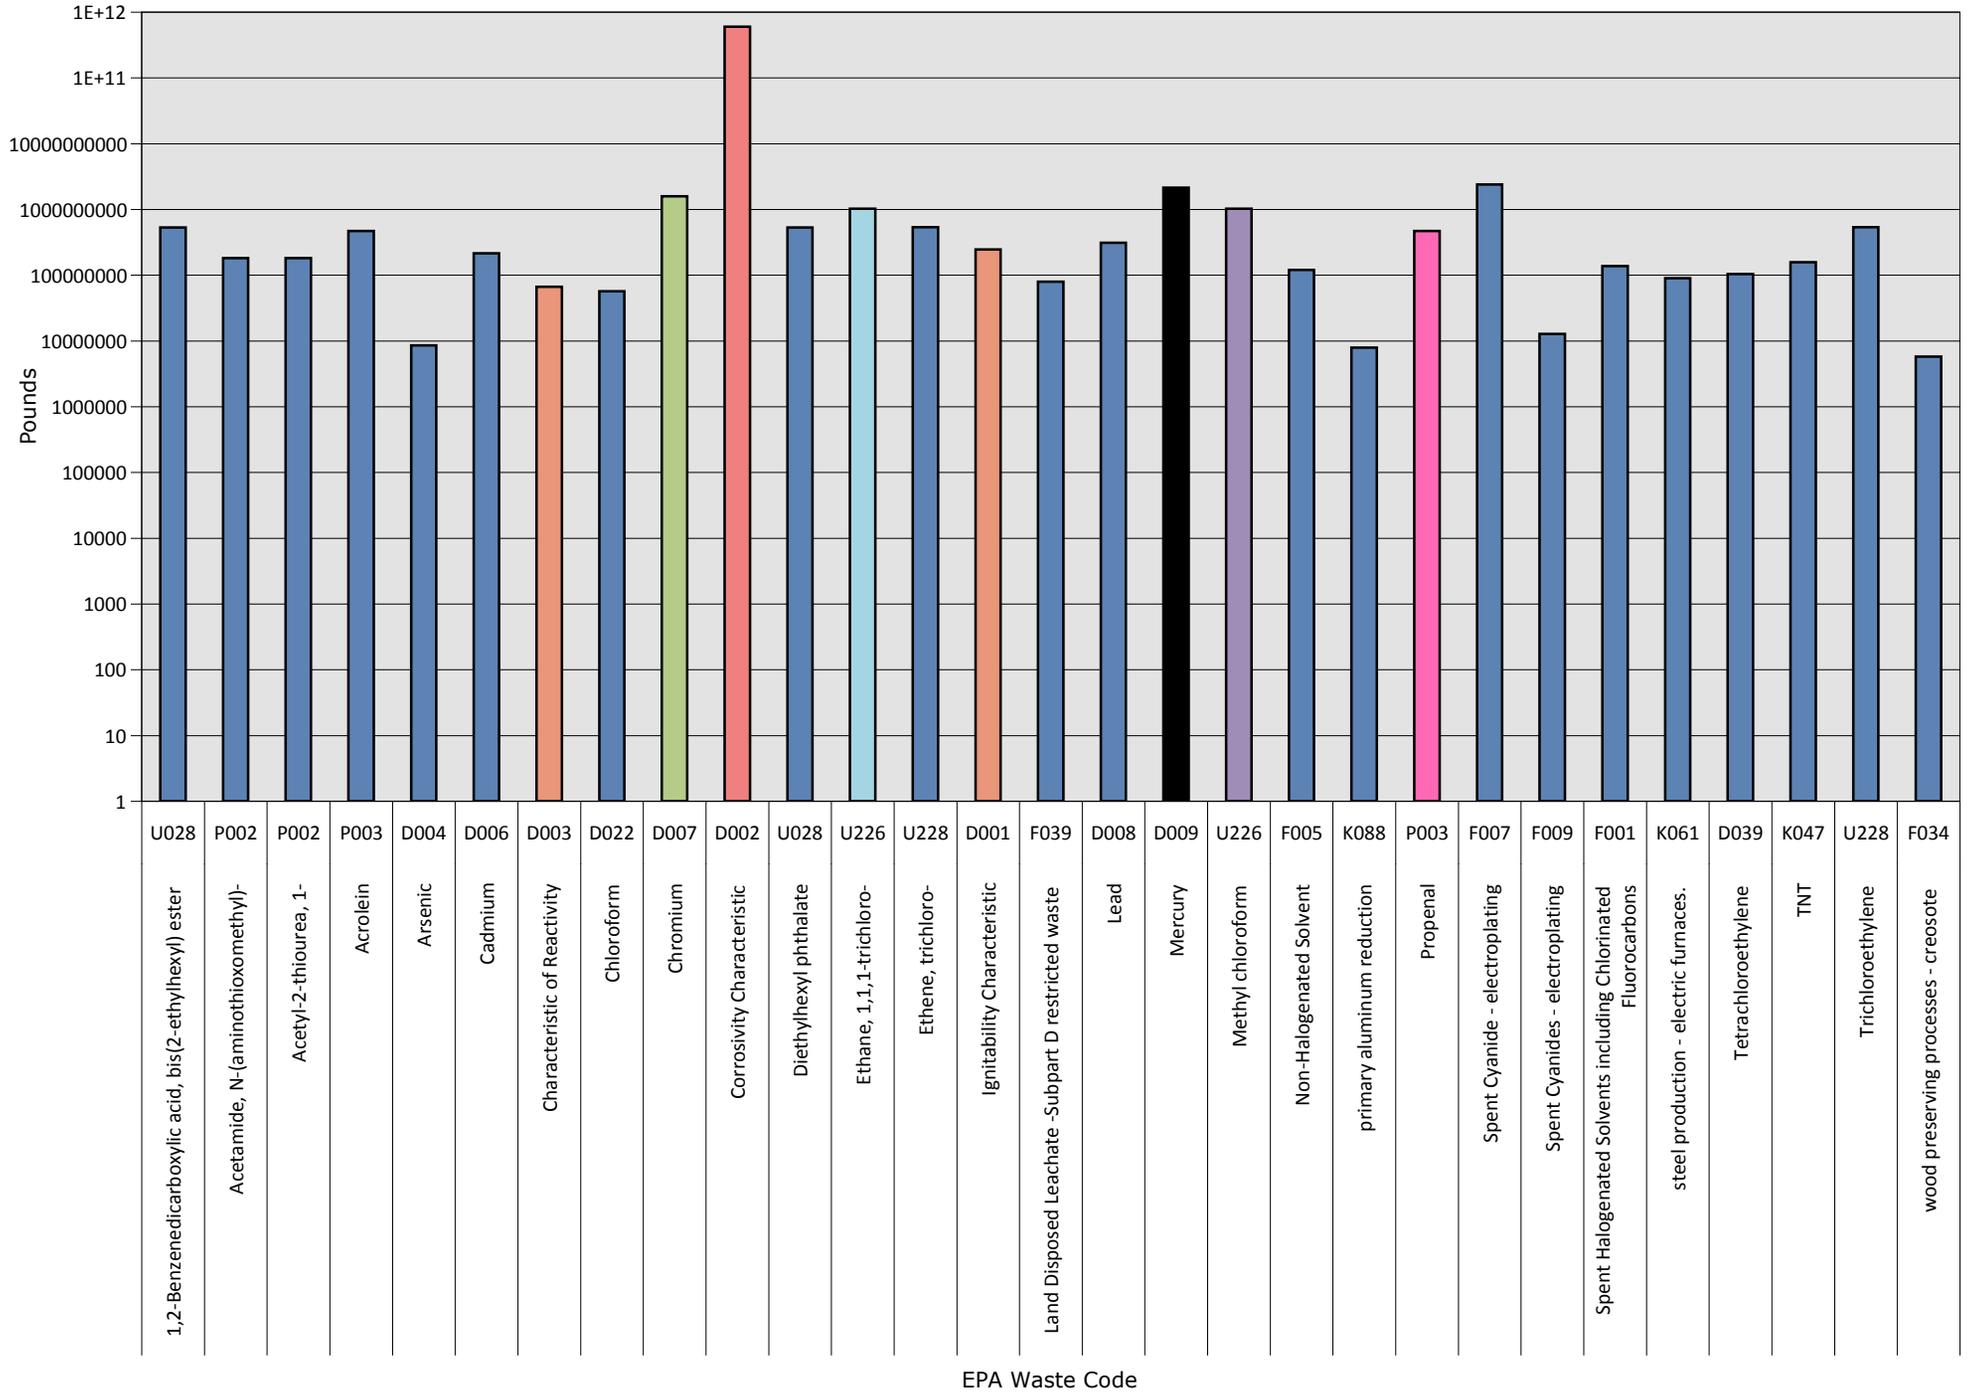

State of Tennessee Large and Small Quantity Hazardous Waste Generators 1983 to Present (Page 1-2)

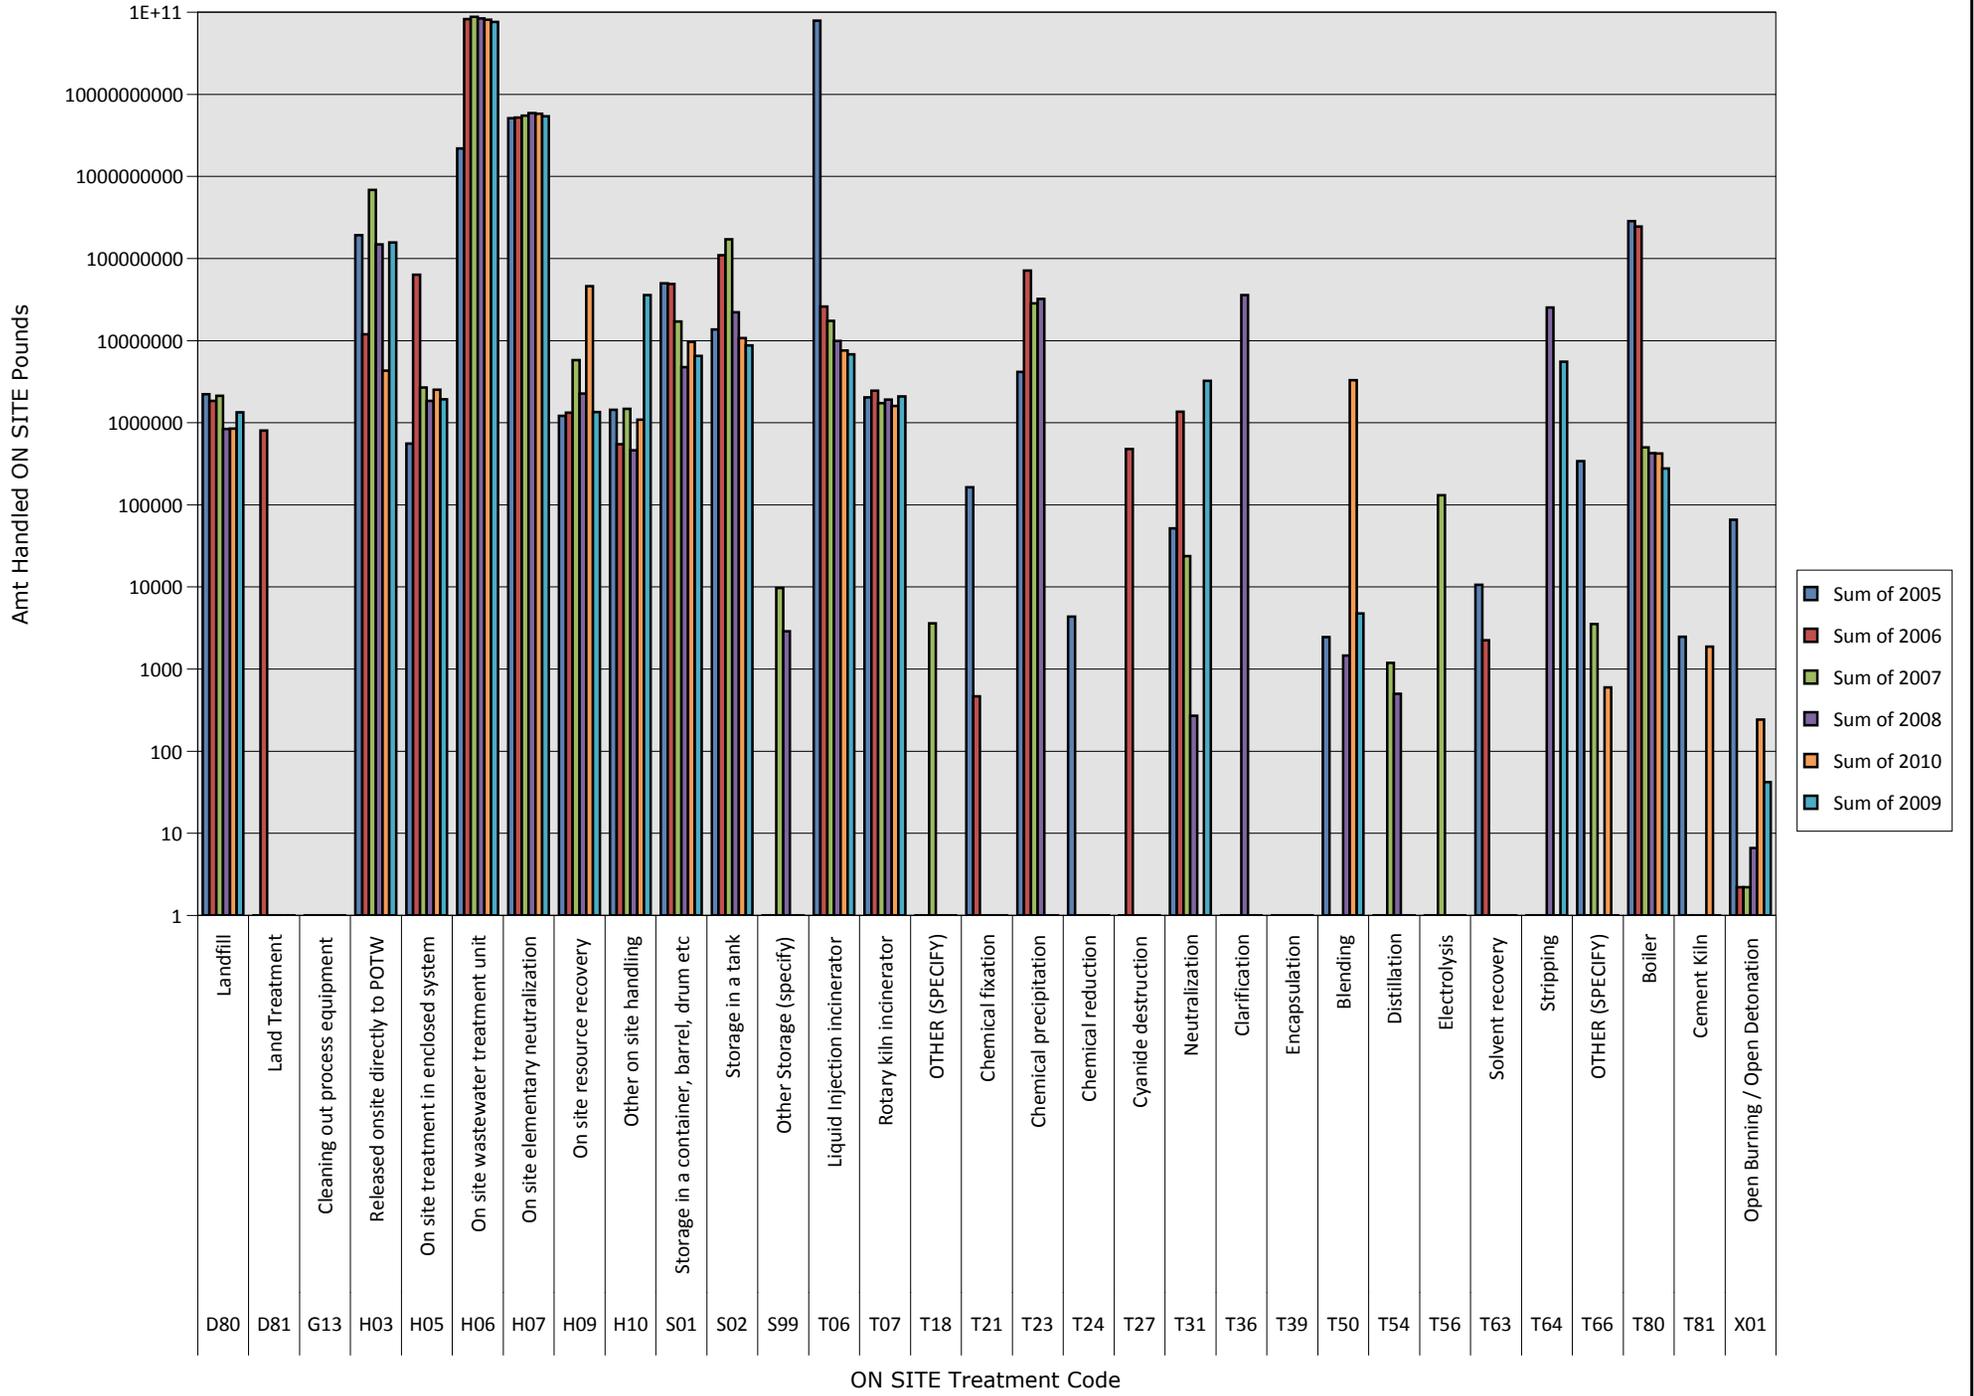

Revenue collected for generator related fees have totaled in the \$1.5 to \$3.0 million range annually (See A-9)

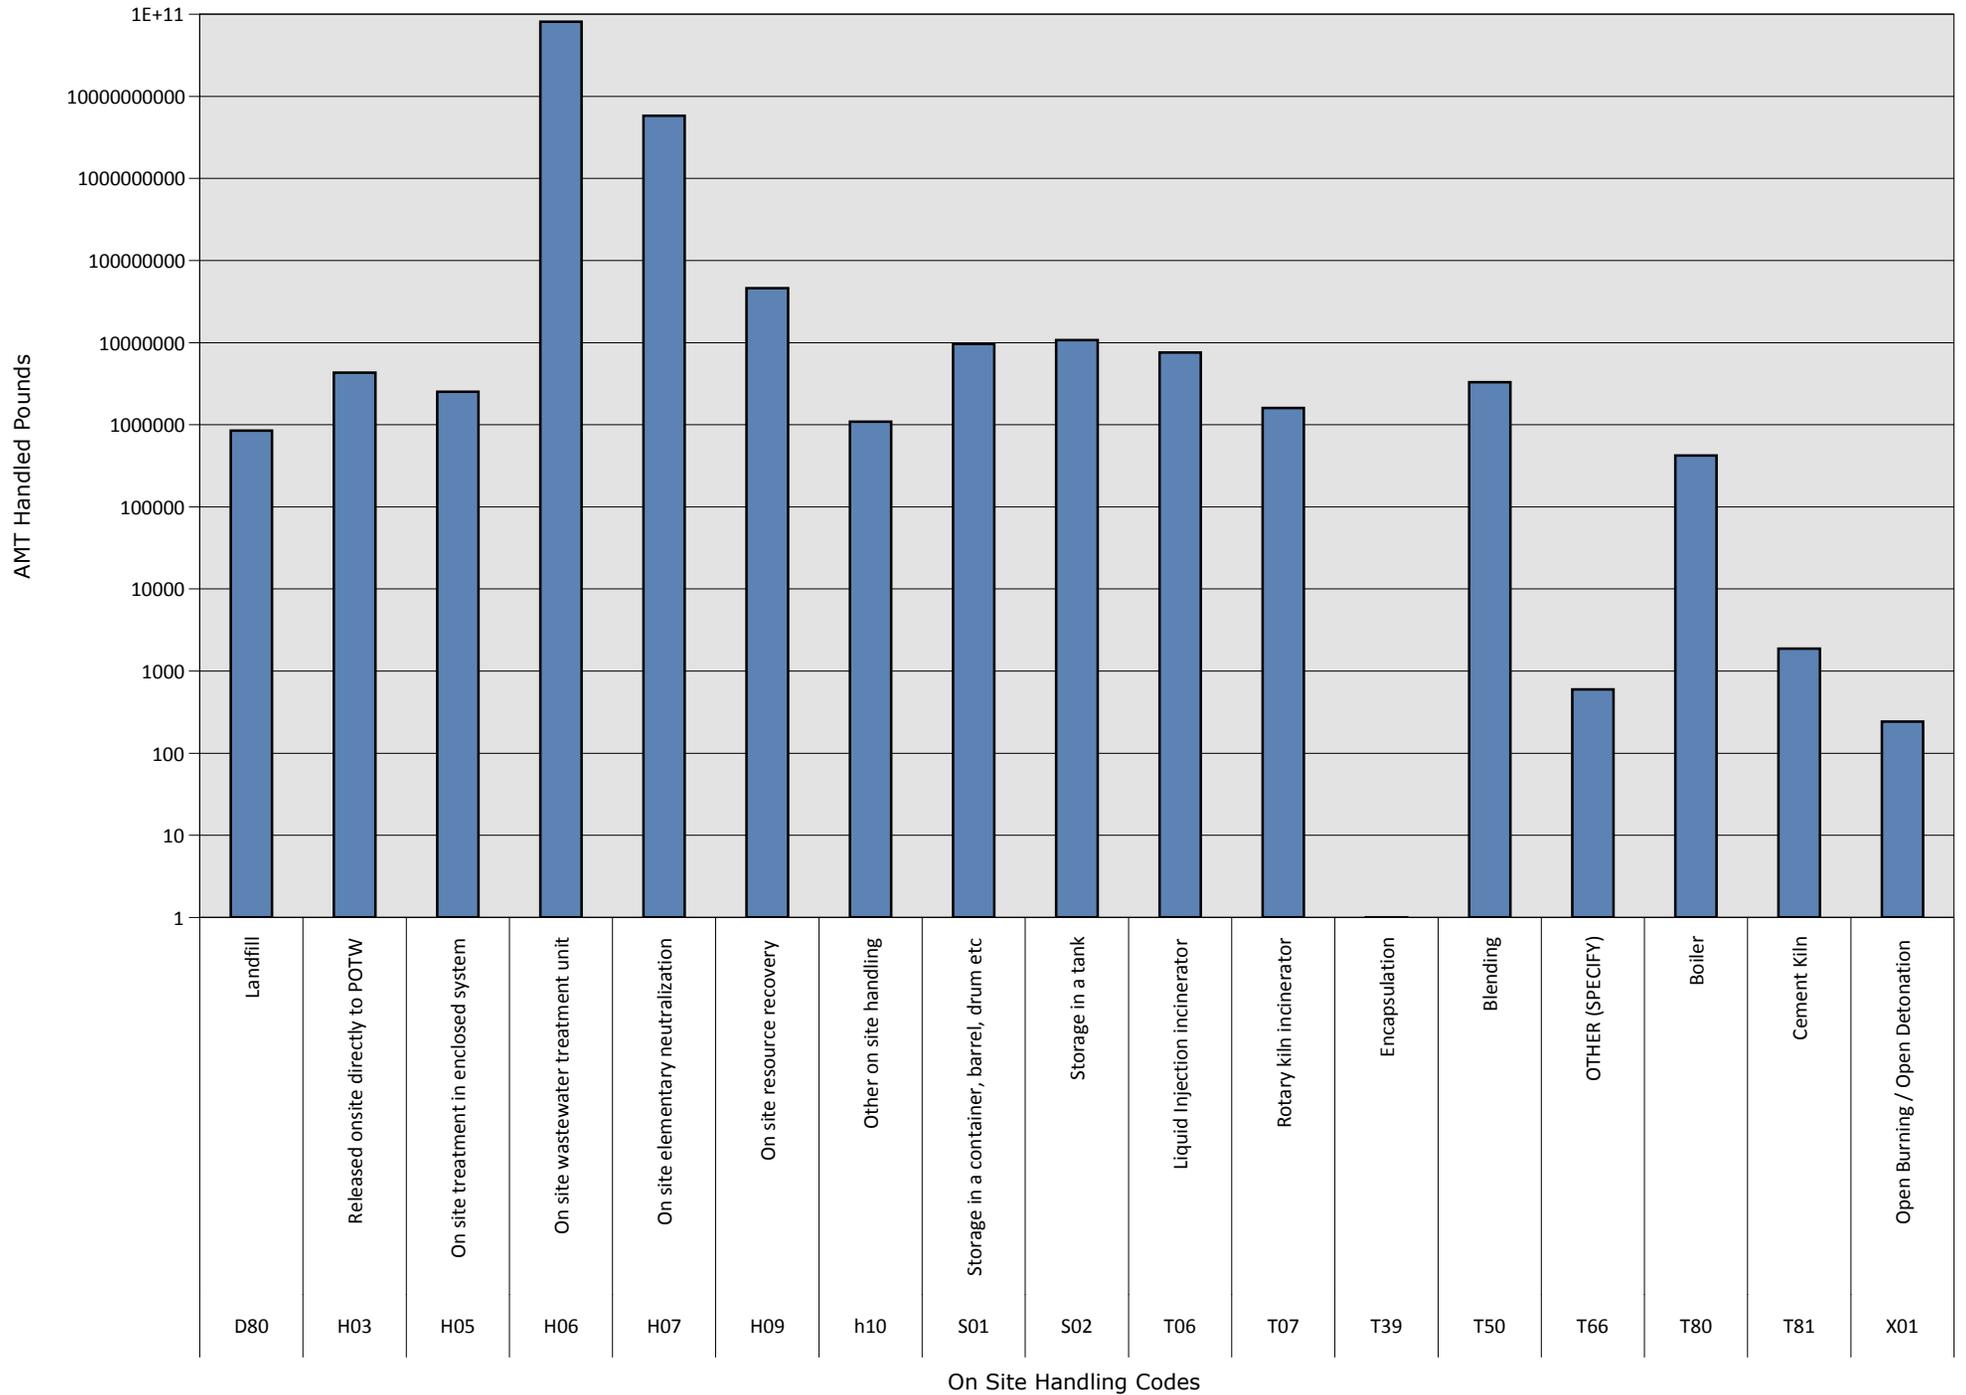

⇒ **Description of Regulated Persons, Fees, Permits (Continued)**

**Hazardous Waste Transporters**

Transporters of hazardous waste are required to obtain a permit if they drop off or pick up hazardous waste in the State of Tennessee. The Department of Environment and Conservation permits and or tracks both categories of transporters: in state and out of state as long as they operate or reside in Tennessee.

Note that one category of transporter resides in Tennessee but operates elsewhere. Other states require an EPA ID for such a transporter (just as Tennessee requires out of state transporters to have an EPA ID from their home state). An effort is made to check transporters against other databases, particularly US DOT sites.

**Figure 7 - - Hazardous Waste Transporter Categories**

\* THE STATE WHERE THE TRANSPORTER PLANS TO OPERATE MAY REQUIRE A PERMIT

The universe of hazardous waste transporters has not changed much throughout the years of this program.

See Graph State of Tennessee Hazardous Waste Transporter Permits Issued on Page 2-2)

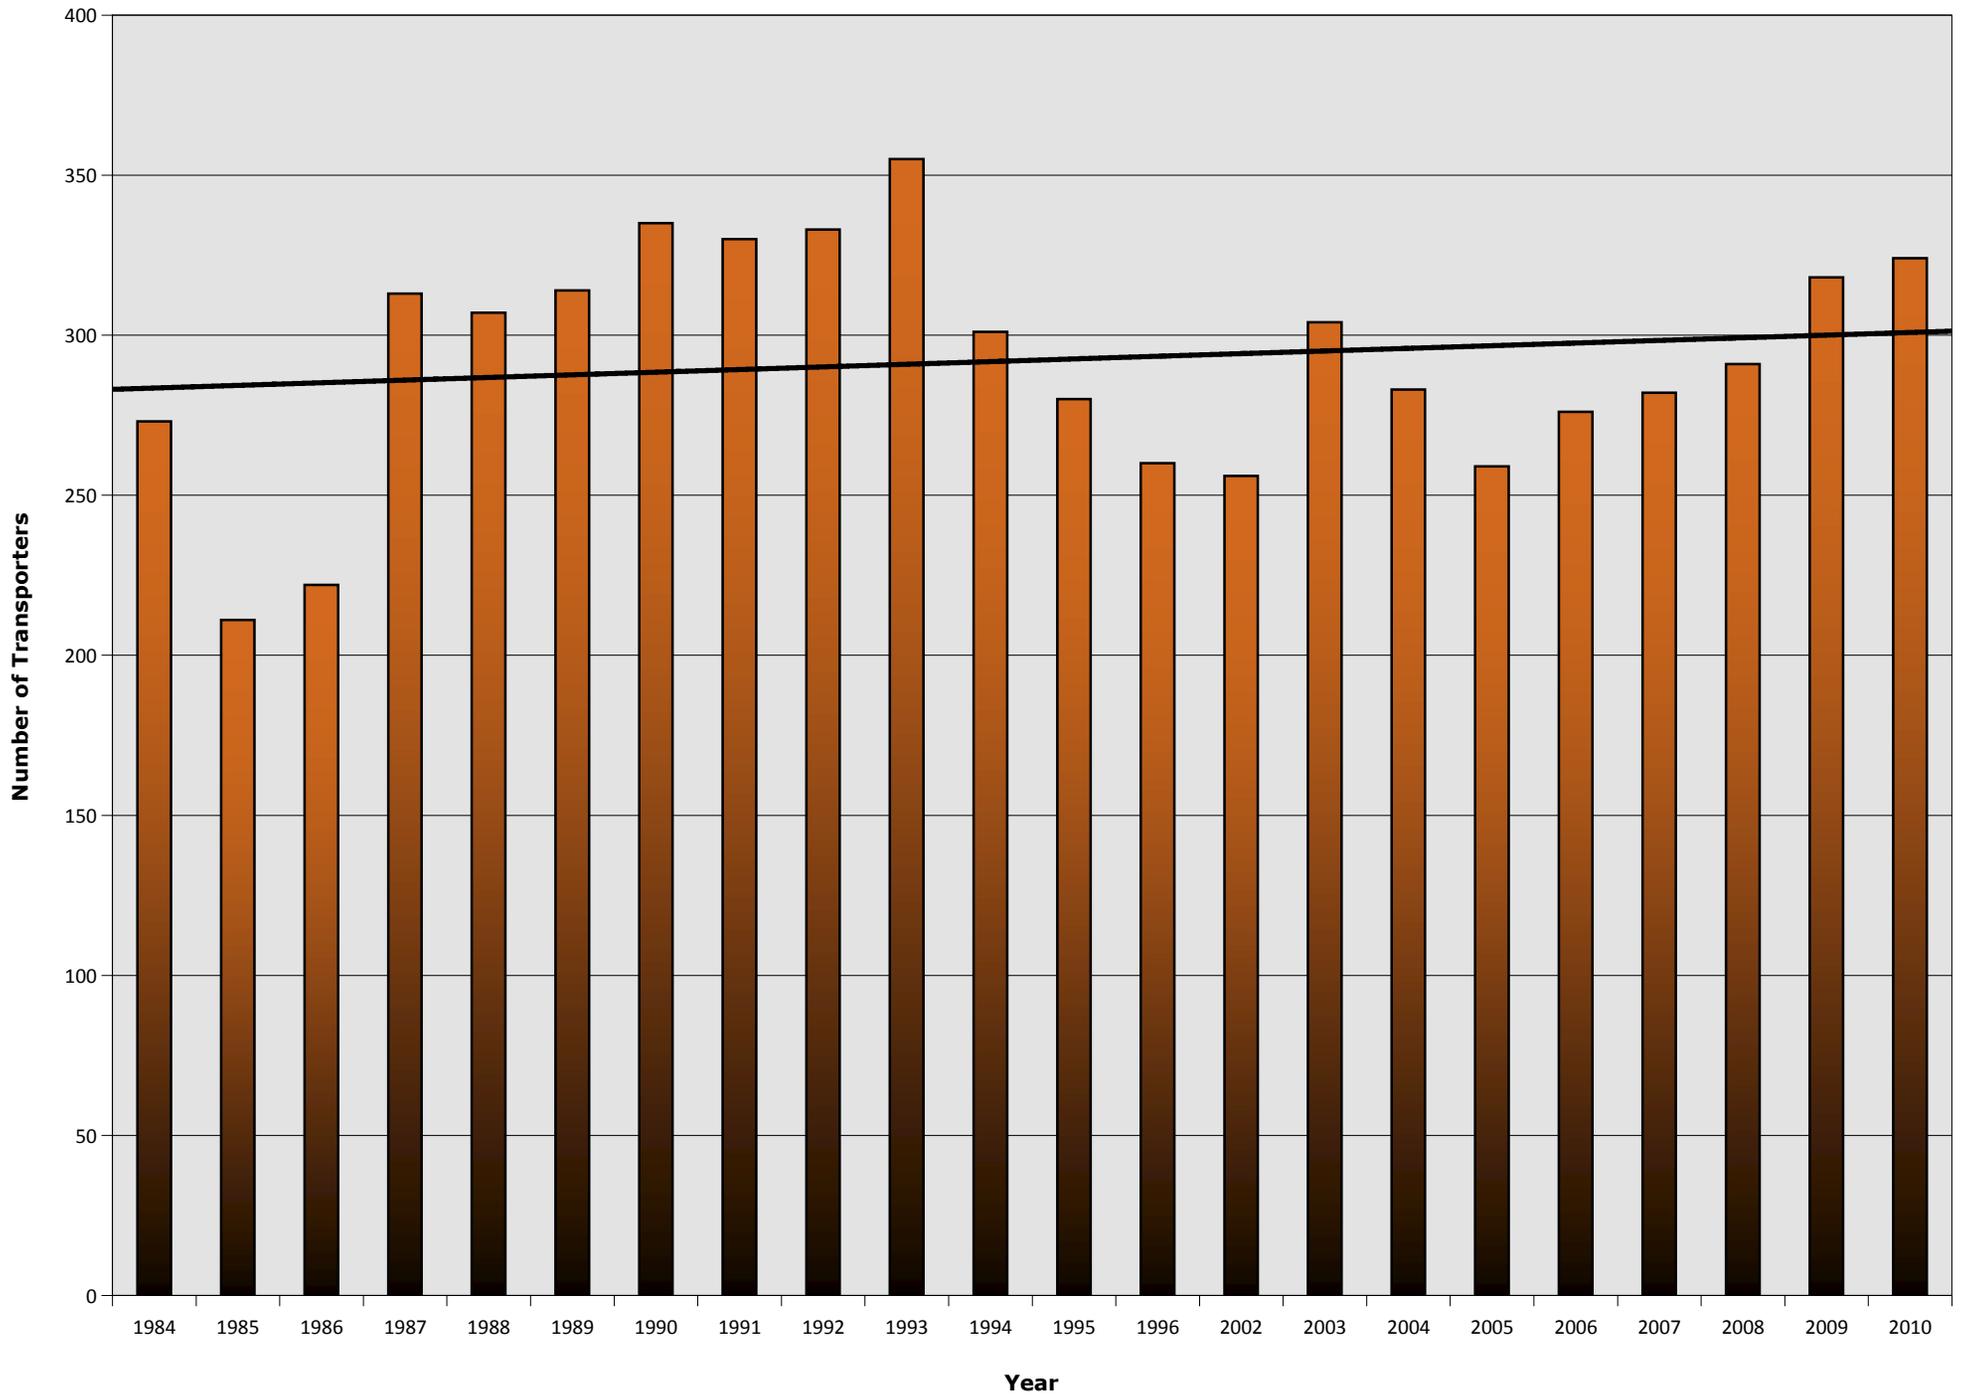

A quick check of this graphical representation indicates Tennessee has consistently permitted about 300 hazardous waste transporters each year since 1984.

Transporter permits expire each year on January 31. Permit Renewal Notifications are sent to transporters at the end of each year around December 1 with a notice that the applications for renewal are due back to TDEC at the end of December. This allows for a month of overlap in permit re-issuance and permit expiration. This has been an effective process. New transporters are advised that their permits expire at the end of January, regardless of date of issuance. A transporter who applies for a new permit in October will have to re-apply in December when the Permit Renewal Notifications are sent out.

Revenue collection for Annual Maintenance (permit) fees and application fees together have totaled in the \$65,000 to \$75,000 range annually since the inception of the program. See Appendix A-9 "Fees by Report Year with Percentage by Category"

**Hazardous Waste Transfer Facilities**

A comprehensive fee study was conducted in 2010 which resulted in the installation of new fees for several regulated entities. Hazardous Waste Transfer Facilities are now required to pay an annual fee of \$850. This fee is due each year on or before December 31. The total number of registered facilities is about 30.

⇒ **Description of Regulated Persons, Fees, Permits (Continued)**

**Hazardous Waste Treatment Storage and Disposal Facilities (TSDF)**

There are two types of TSD facilities: commercial and non-commercial. Some commercial TSD facilities handle large amounts of hazardous waste performing a valuable service to in state and out of state generators.

TSD facilities must operate under strict permit guidelines. TSD facilities require additional monitoring and permitting when treatment, storage or disposal processes change. These changes require additional fees and reporting.

A TSD facility may be required to apply for and obtain long term post closure or corrective action permits upon closing. Multiple permits may be issued for one site. The universe for TSD permitted sites has been around 50 for the duration of the RCRA program. Only a few have operated commercially. The universe of TSD facilities (A-5) that have GENERATED hazardous waste has almost consistently been 25 since the year 2000 - graph on page 3-2.

TSD facilities generate a great deal of revenue. Annual maintenance fees, application fees, and permit modification fees account for about 30% of the annual revenue identified by the Hazardous Waste program.

**Figure 8 - - Typical Percent of Total Fees Received by Category**

FEE CATEGORY	AMOUNT RECEIVED	% OF TOTAL	NOTES
<b>Fees Taken from 1992 Data</b>

⇒ **Compliance, Monitoring and Enforcement (CME)**

The Tennessee Hazardous Waste Management Act of 1977, TCA Section 68-212-107, authorizes the commissioner to inspect and enforce hazardous waste rules and regulations (stated here in part):

(b) For the purpose of developing or enforcing any rule or regulation authorized by this part, or enforcing any requirement of this part or order issued by the commissioner or board pursuant to this part, the commissioner is authorized to at any reasonable time:

- (1) Enter any place where wastes (which the commissioner has reason to believe may be hazardous) are, may be, or may have been generated, stored, transported, treated, disposed of, or otherwise handled;
- (2) Inspect and obtain samples of any waste (which the commissioner has reason to believe may be hazardous), samples of any containers or labeling for such wastes, and samples of ambient air, surface waters, and ground waters at the facility or site; and
- (3) Inspect and copy any records, reports, test results, or other information relating to the purposes of this part.

⇒ **Inspections**

There are about 15 different categories of inspections as indicated here:

CAC	CORRECTIVE ACTION COMPLIANCE EVALUATION
CAV	COMPLIANCE ASSISTANCE VISIT
CDI	CASE DEVELOPMENT INSPECTION
CEI	COMPLIANCE EVALUATION INSPECTION ON-SITE
CSE	COMPLIANCE SCHEDULE EVALUATION
FCI	FOCUSED COMPLIANCE INSPECTION
FRR	FINANCIAL RECORD REVIEW
FSD	FACILITY SELF DISCLOSURE
FUI	FOLLOW-UP INSPECTION
GME	GROUNDWATER MONITORING EVALUATION
NIR	NO 3007 INFORMATION REQUEST RECEIVED
NRR	NON-FINANCIAL RECORD REVIEW
OAM	OPERATION AND MAINTENANCE INSPECTION
SNN	NOT A SIGNIFICANT NON-COMPLIER
SNY	SIGNIFICANT NON-COMPLIER

⇒ **Graphical Representation of Inspection History**

State of Tennessee Hazardous Waste LQG Compliance Evaluation Inspections CEI by Report Year (RCRAInfo EPA Data) Page 3-4

State of Tennessee Hazardous Waste SQG Compliance Evaluation Inspections (CEI) by Report Year (Based on RCRAInfo EPA Data) Page 3-5

⇒ **Enforcement**

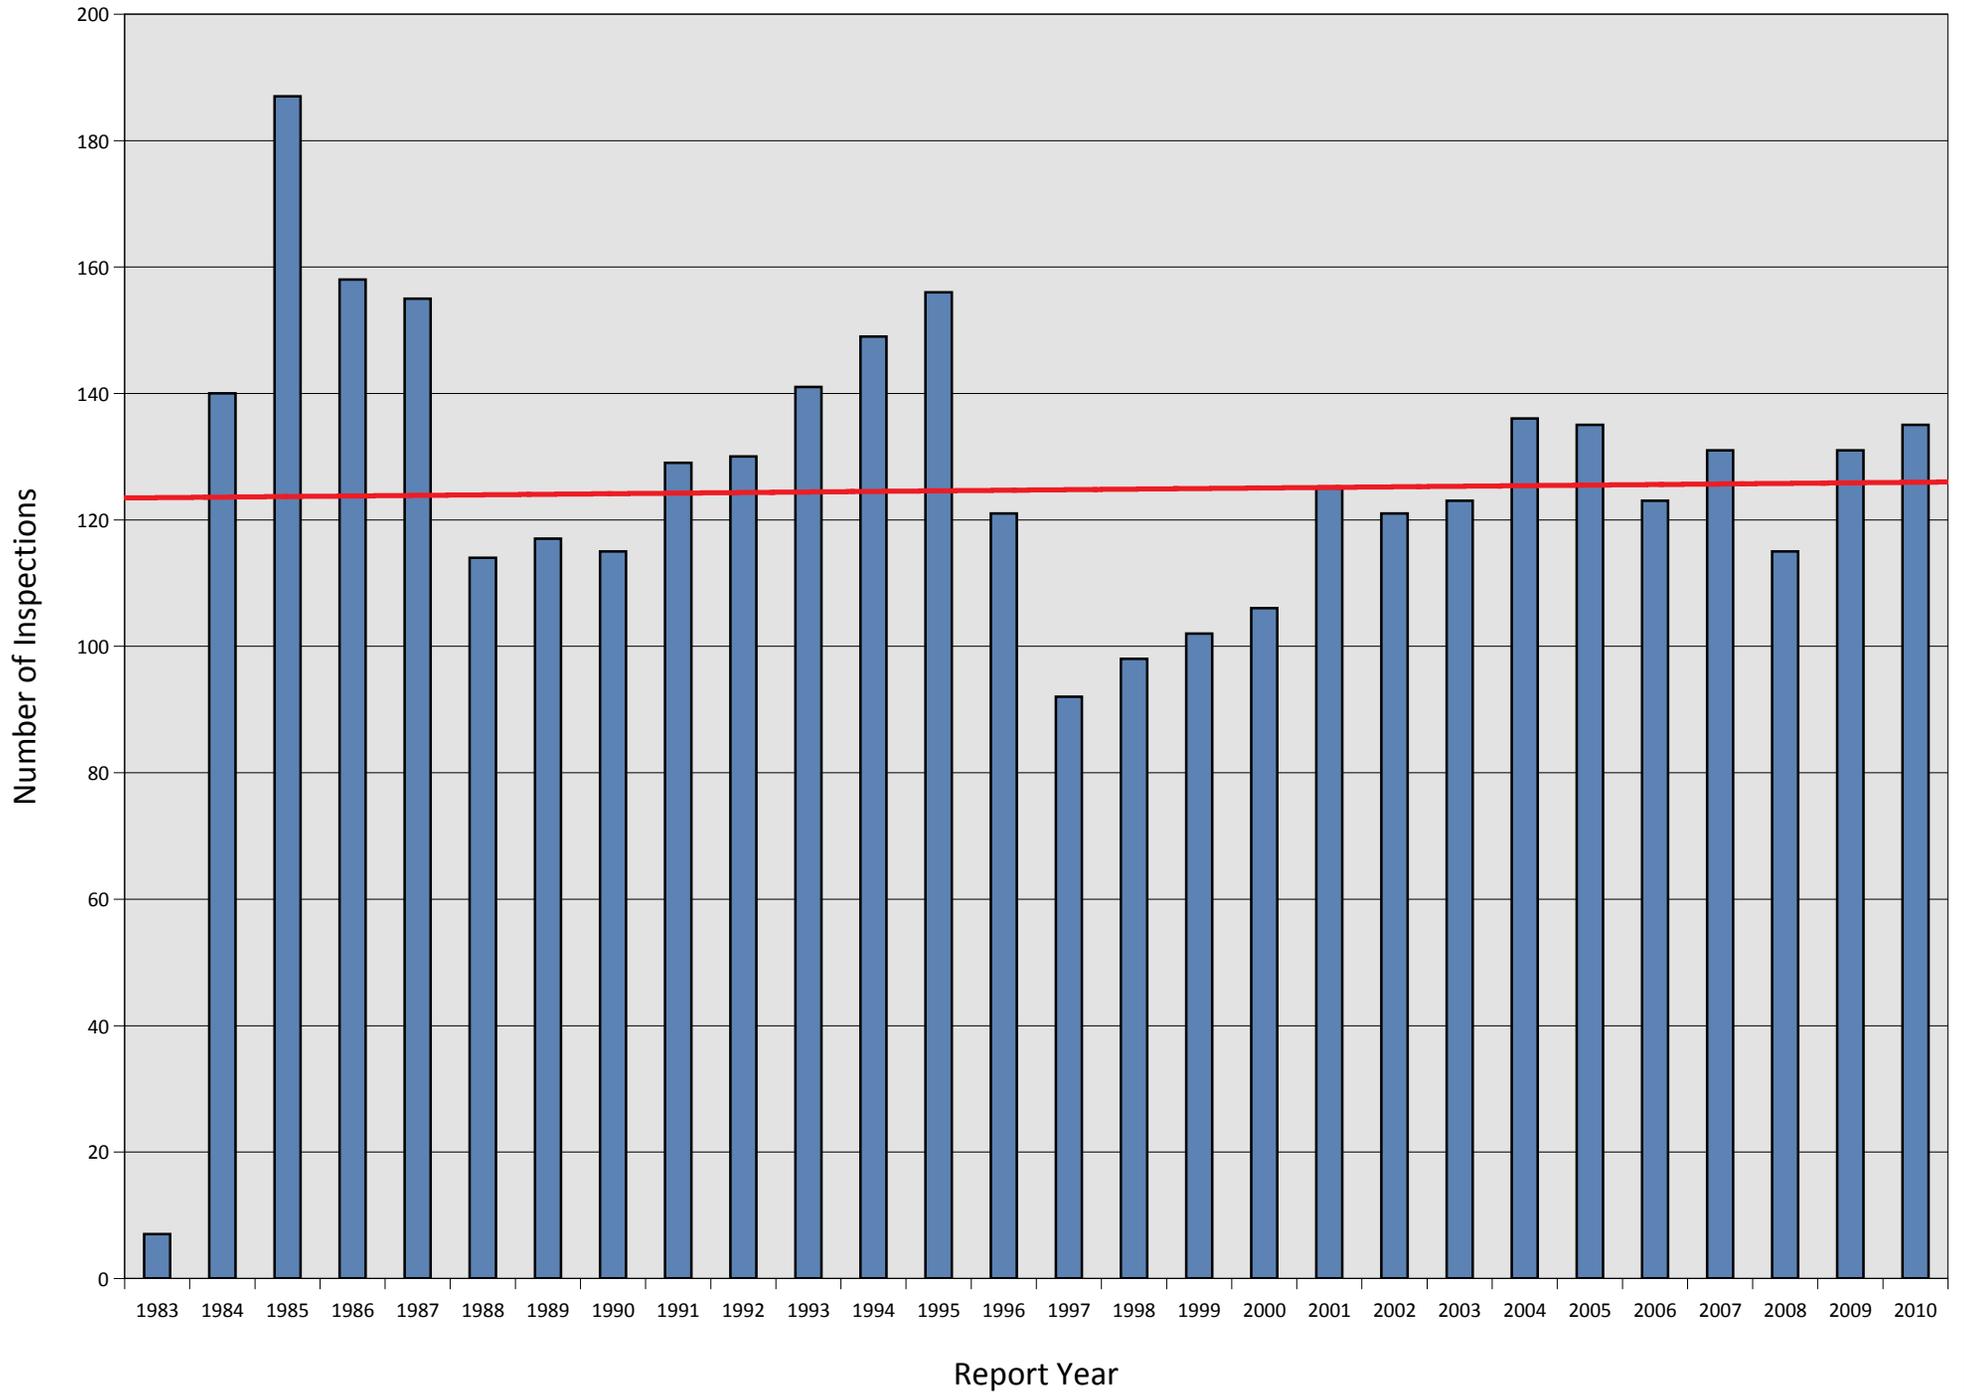

There are approximately 8 different categories of enforcement actions\*:

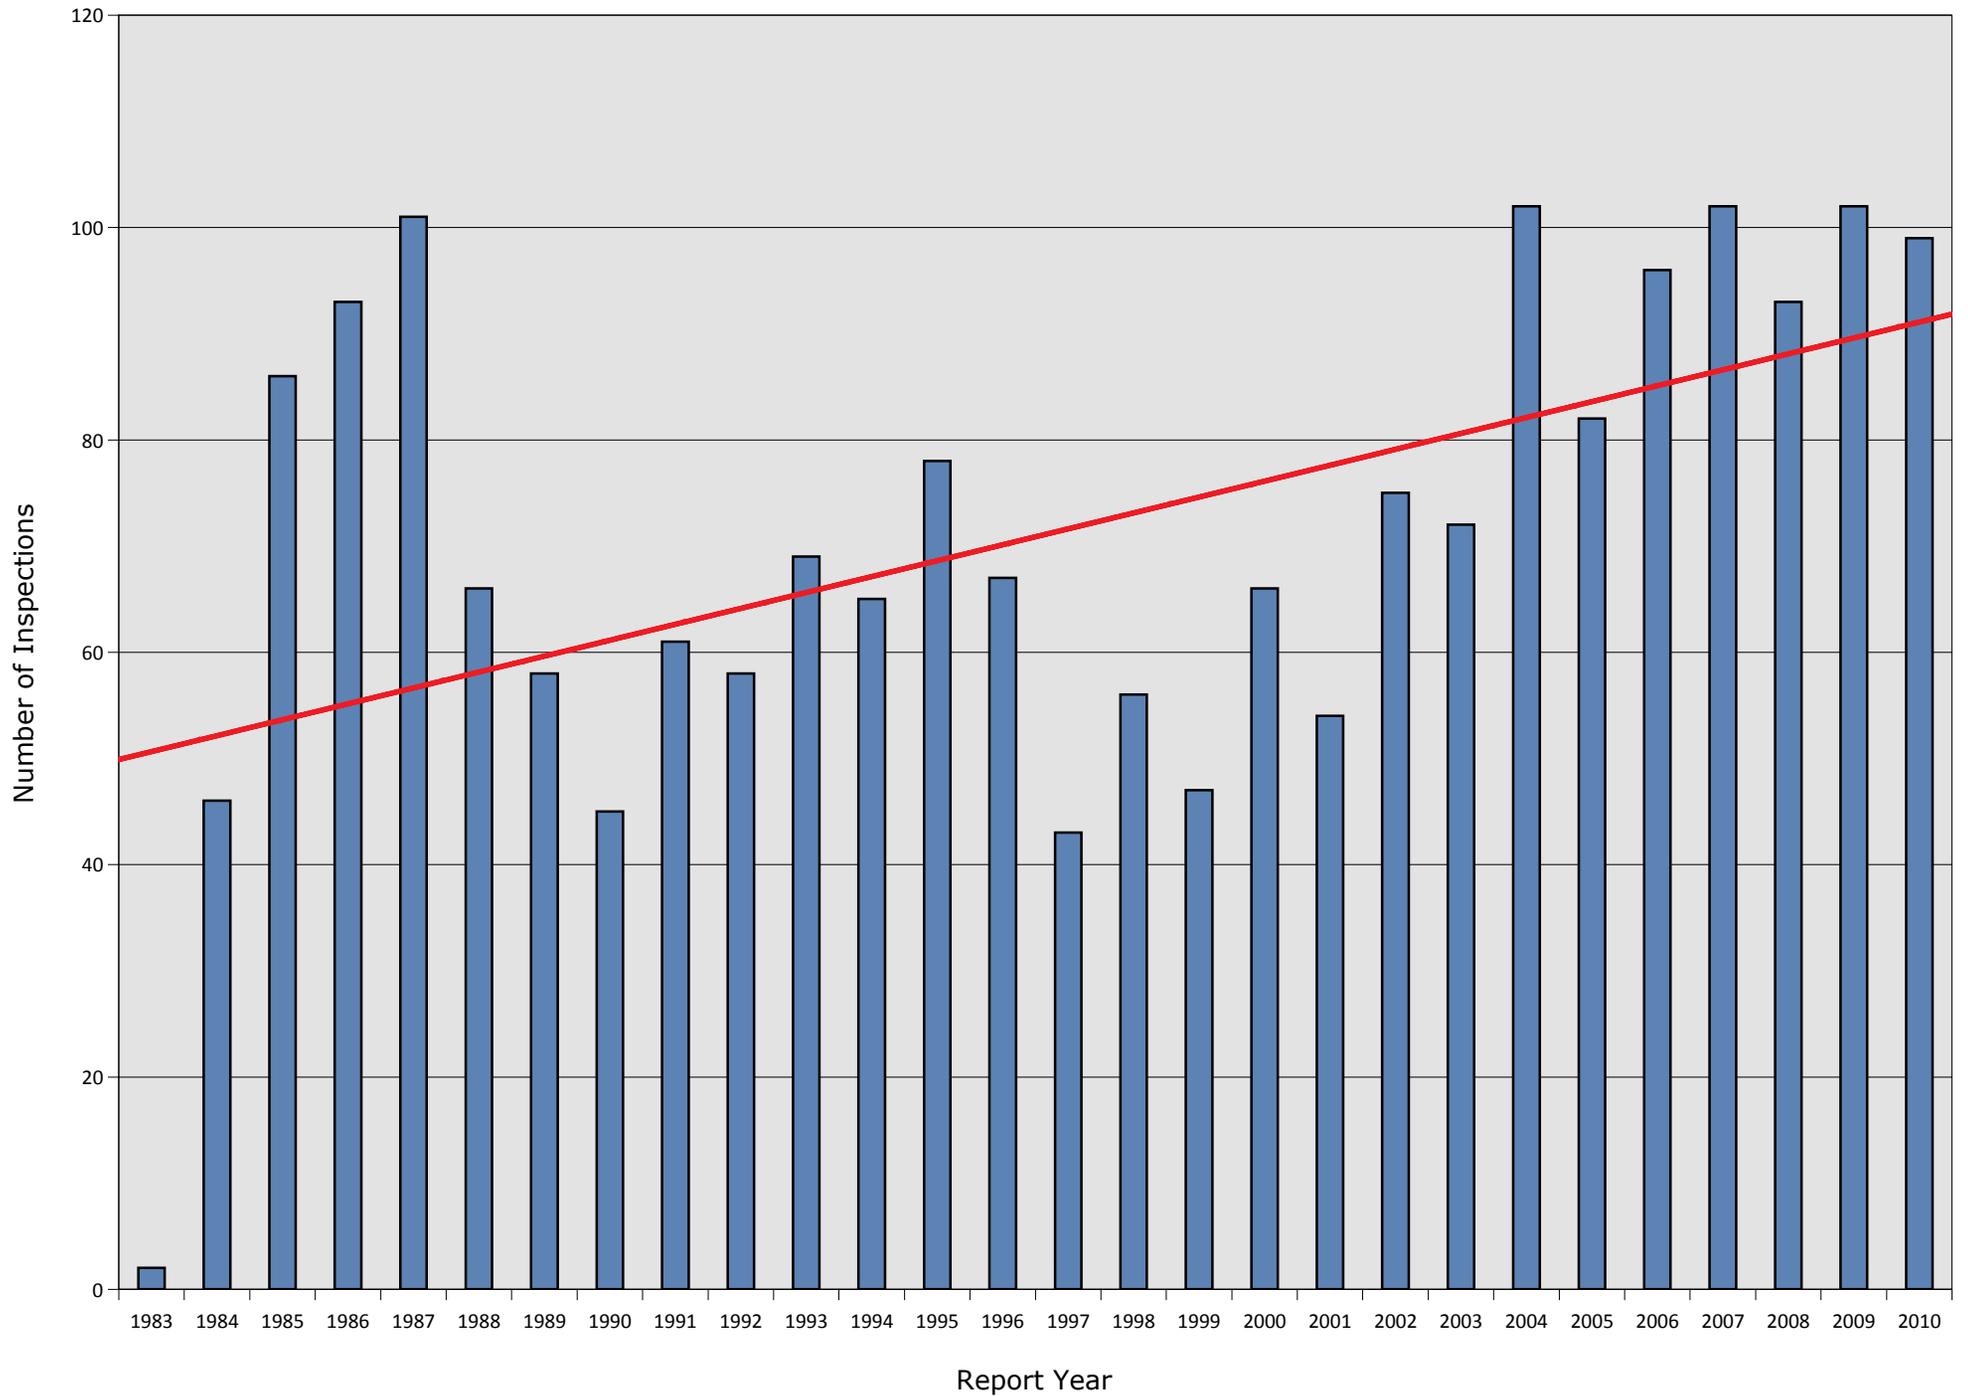

120	Written Informal (Notice of Violation)	126	Warning Letter
122	Appeal	127	Show Cause Meeting
124	Administrative Review	210	Director Order
125	Enforcement Action Request	211	Commissioner's Order

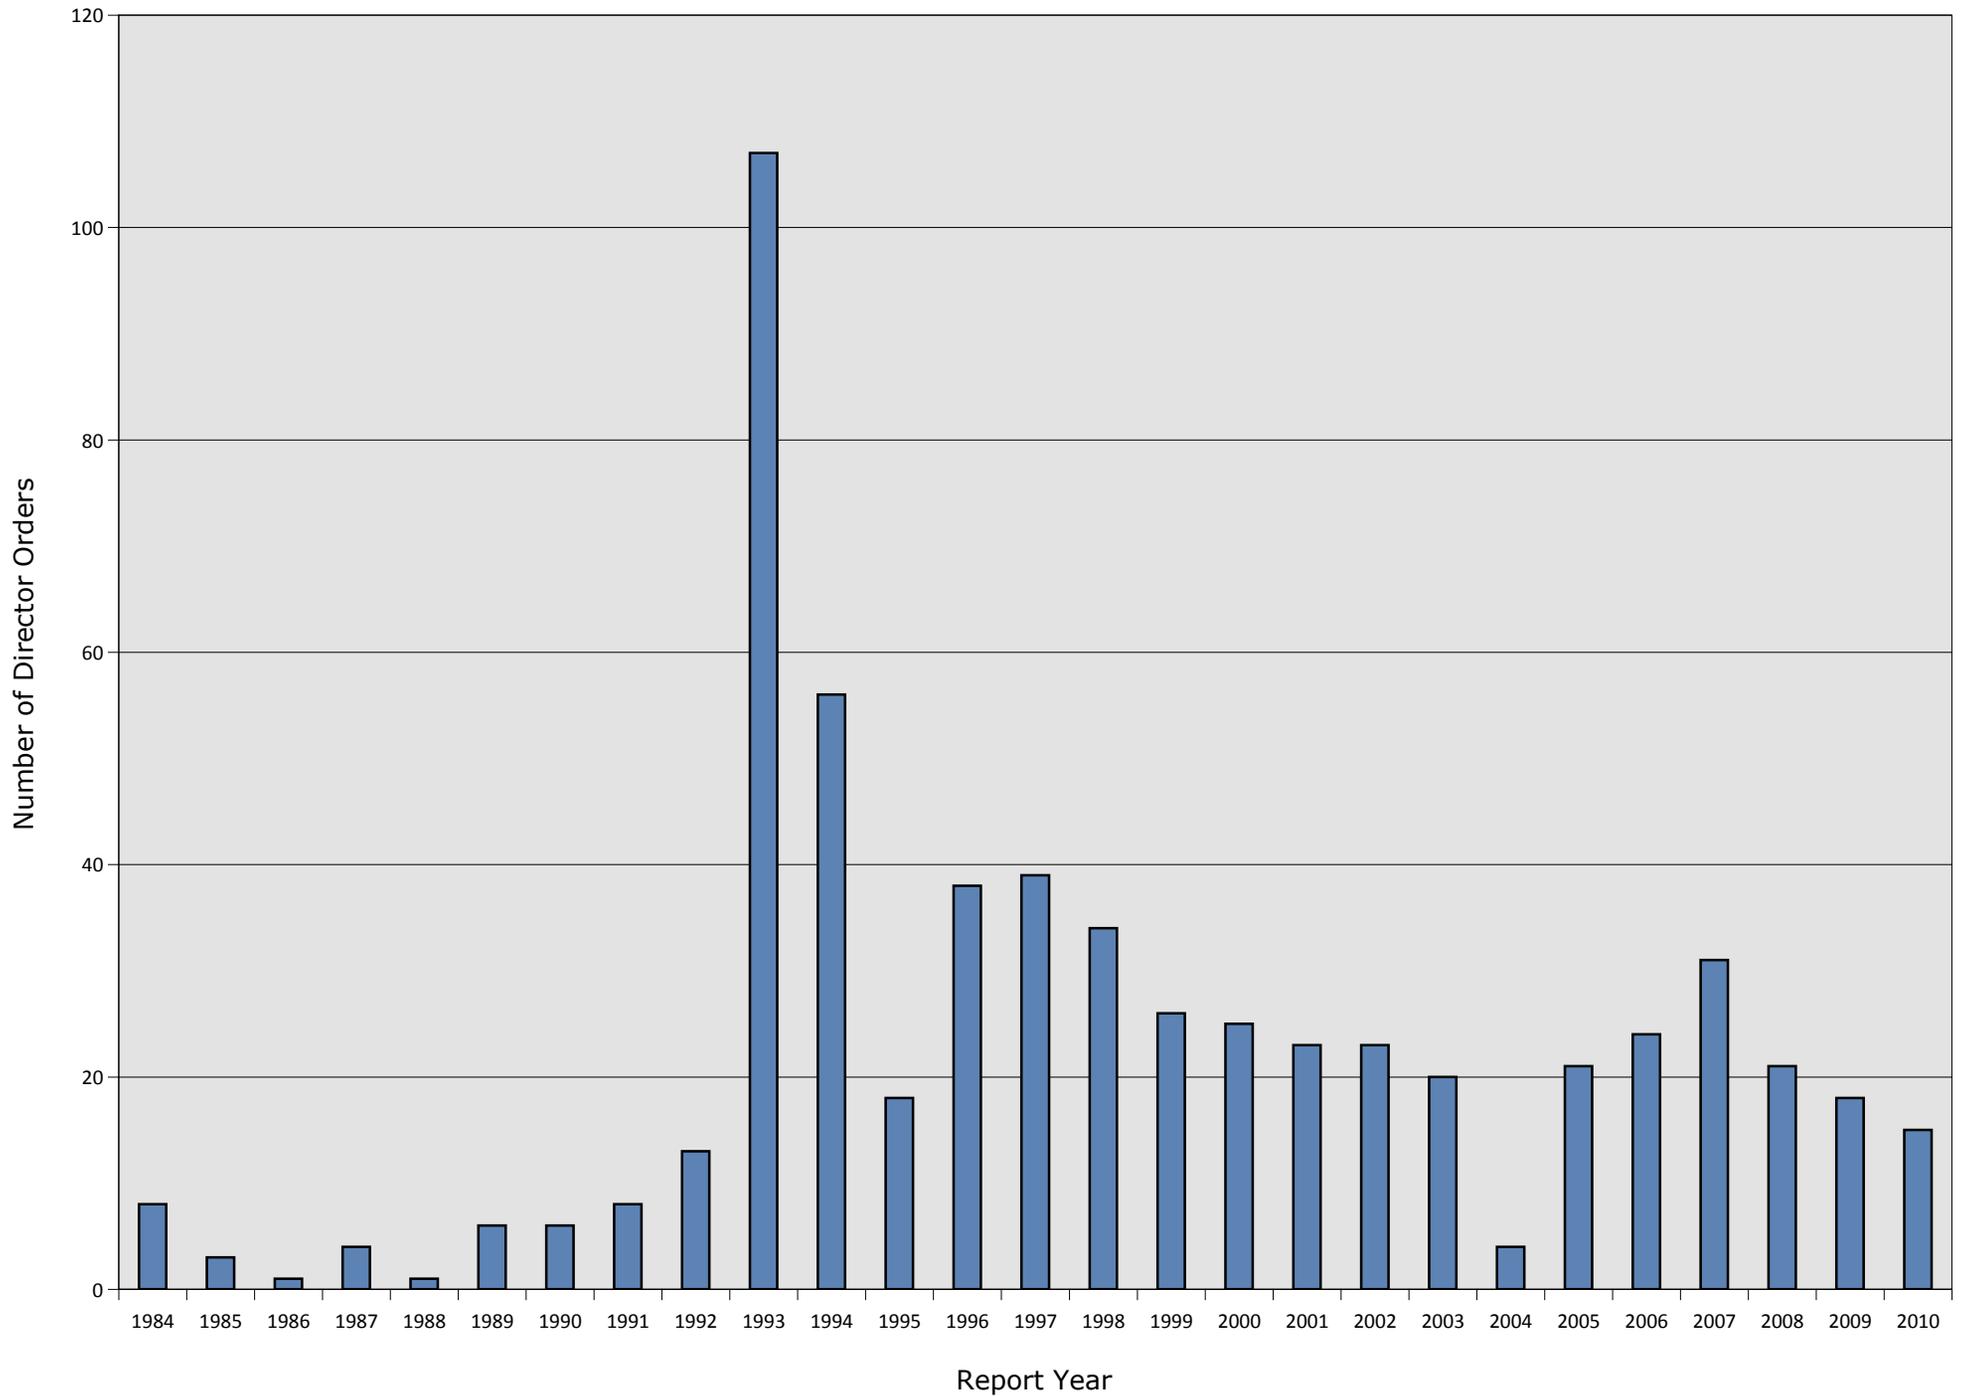

\*new codes were developed by EPA around 1997 - some inactive codes do not appear above

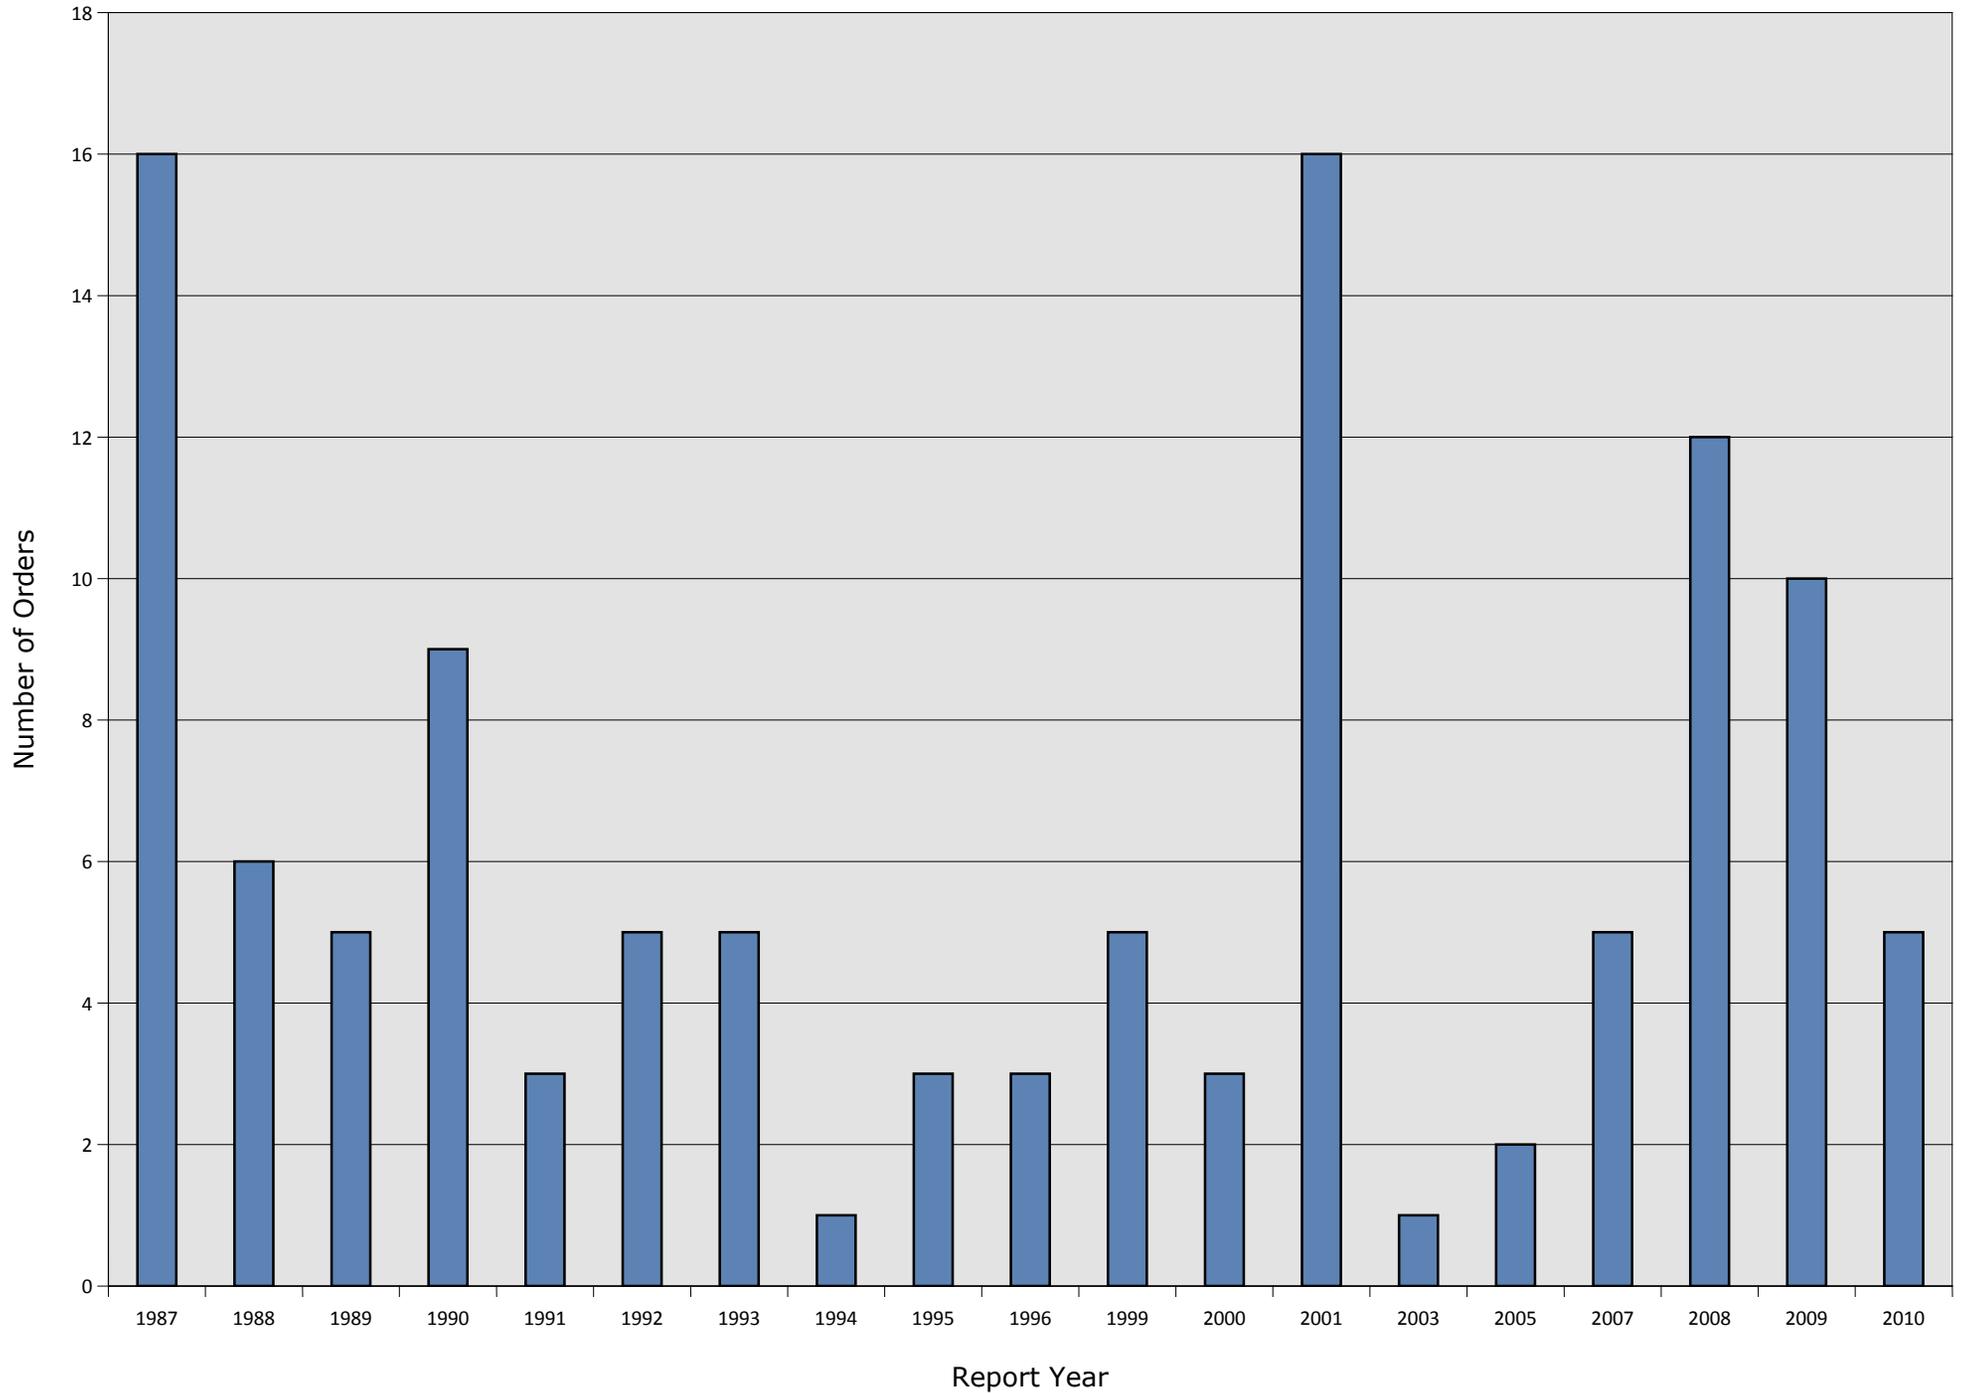

⇒ **Graphical Enforcement History**

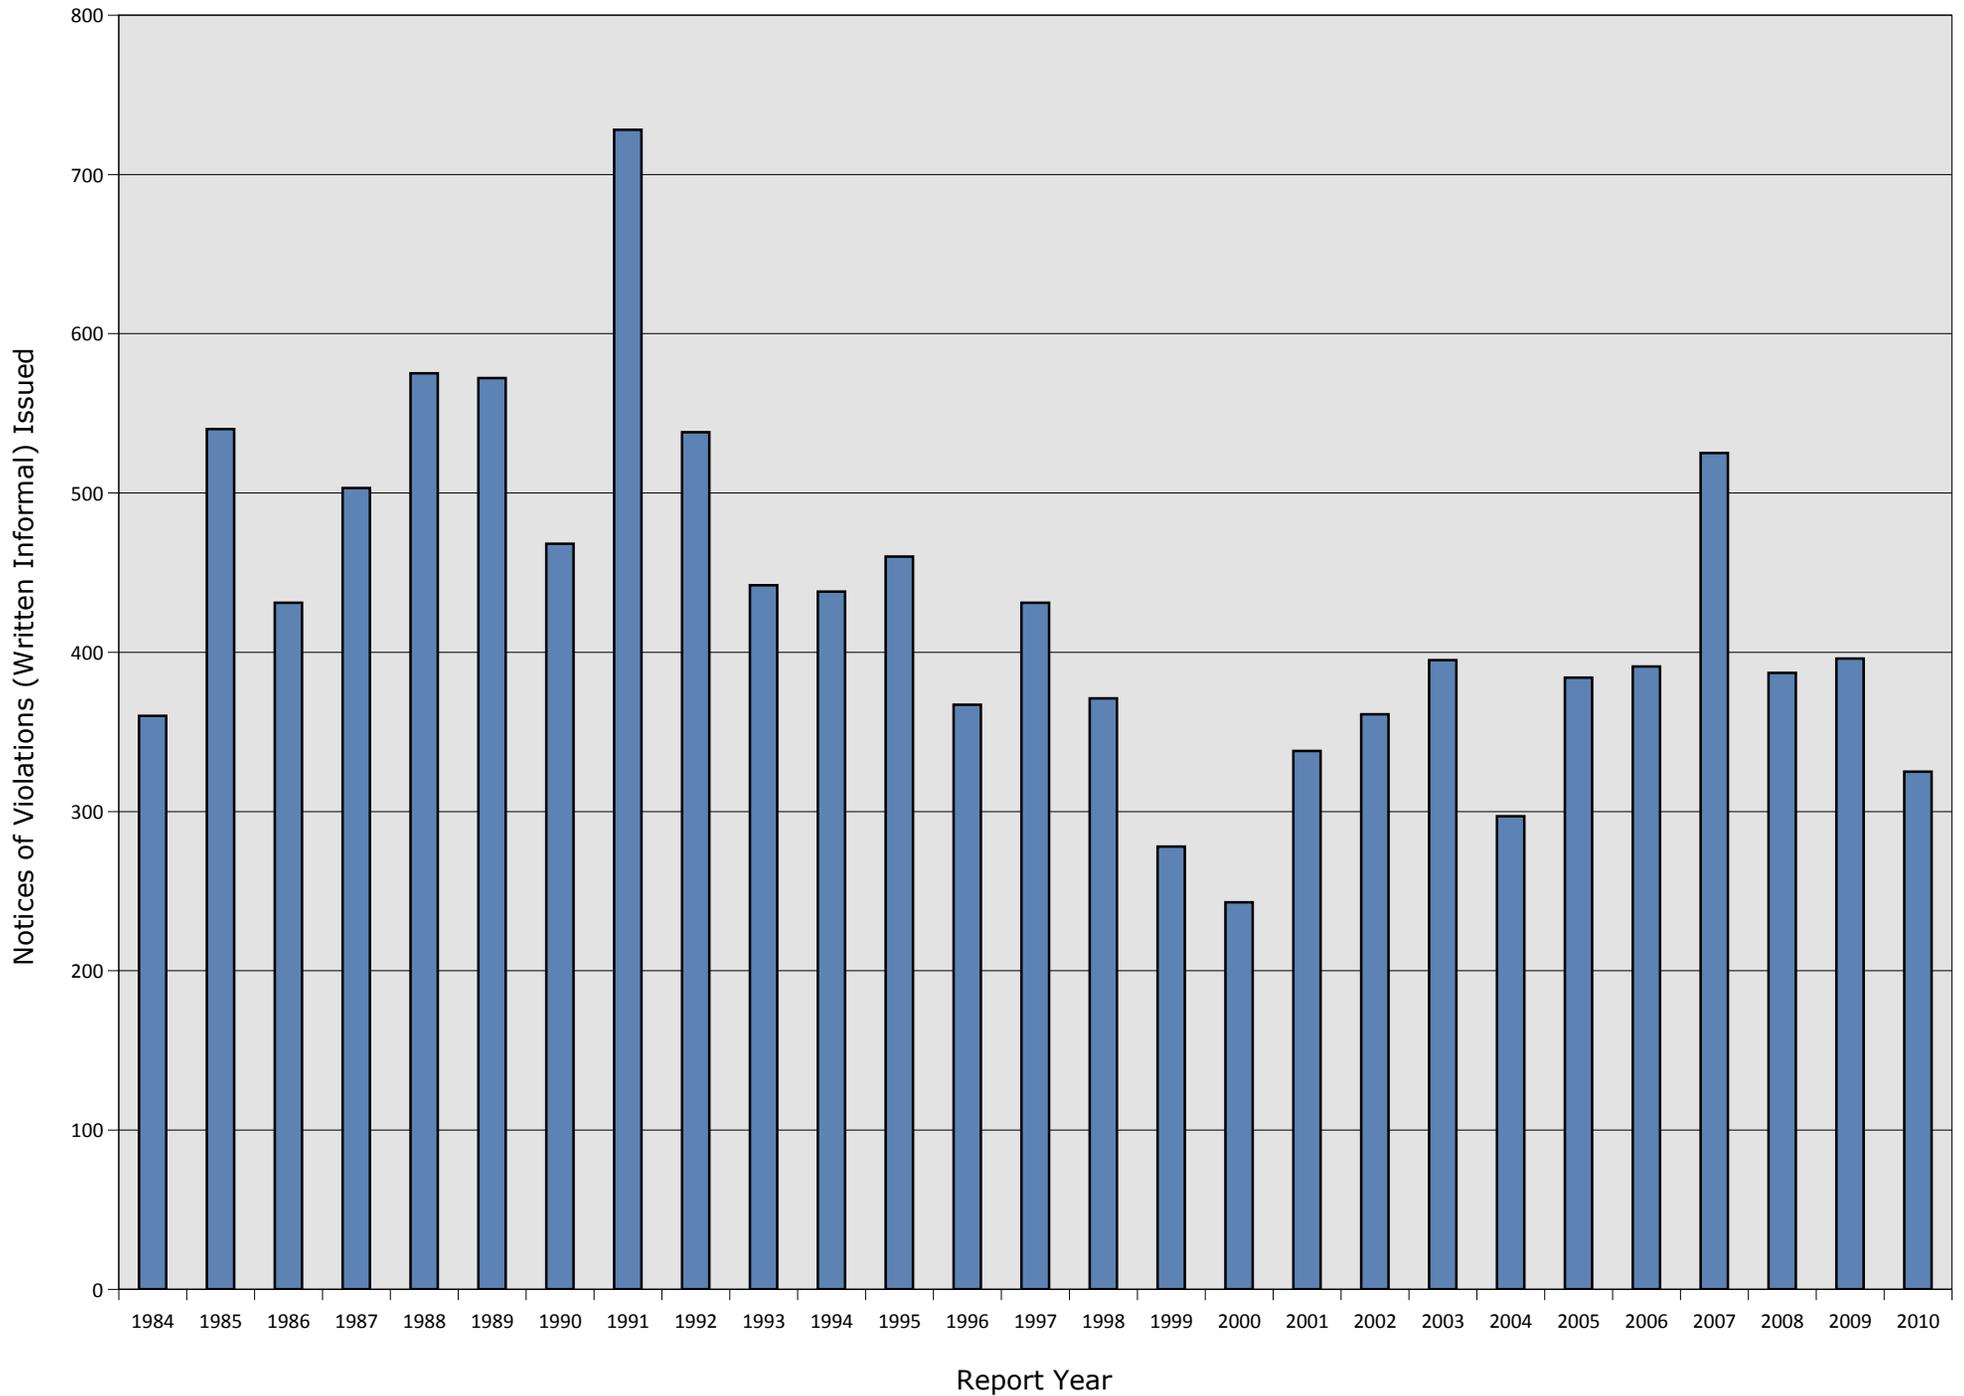

Refer to graphs on pages 3-6, 3-7, 3-8, 3-9 and 3-10 for Enforcement Orders, NOV's and Enforcement Penalties.

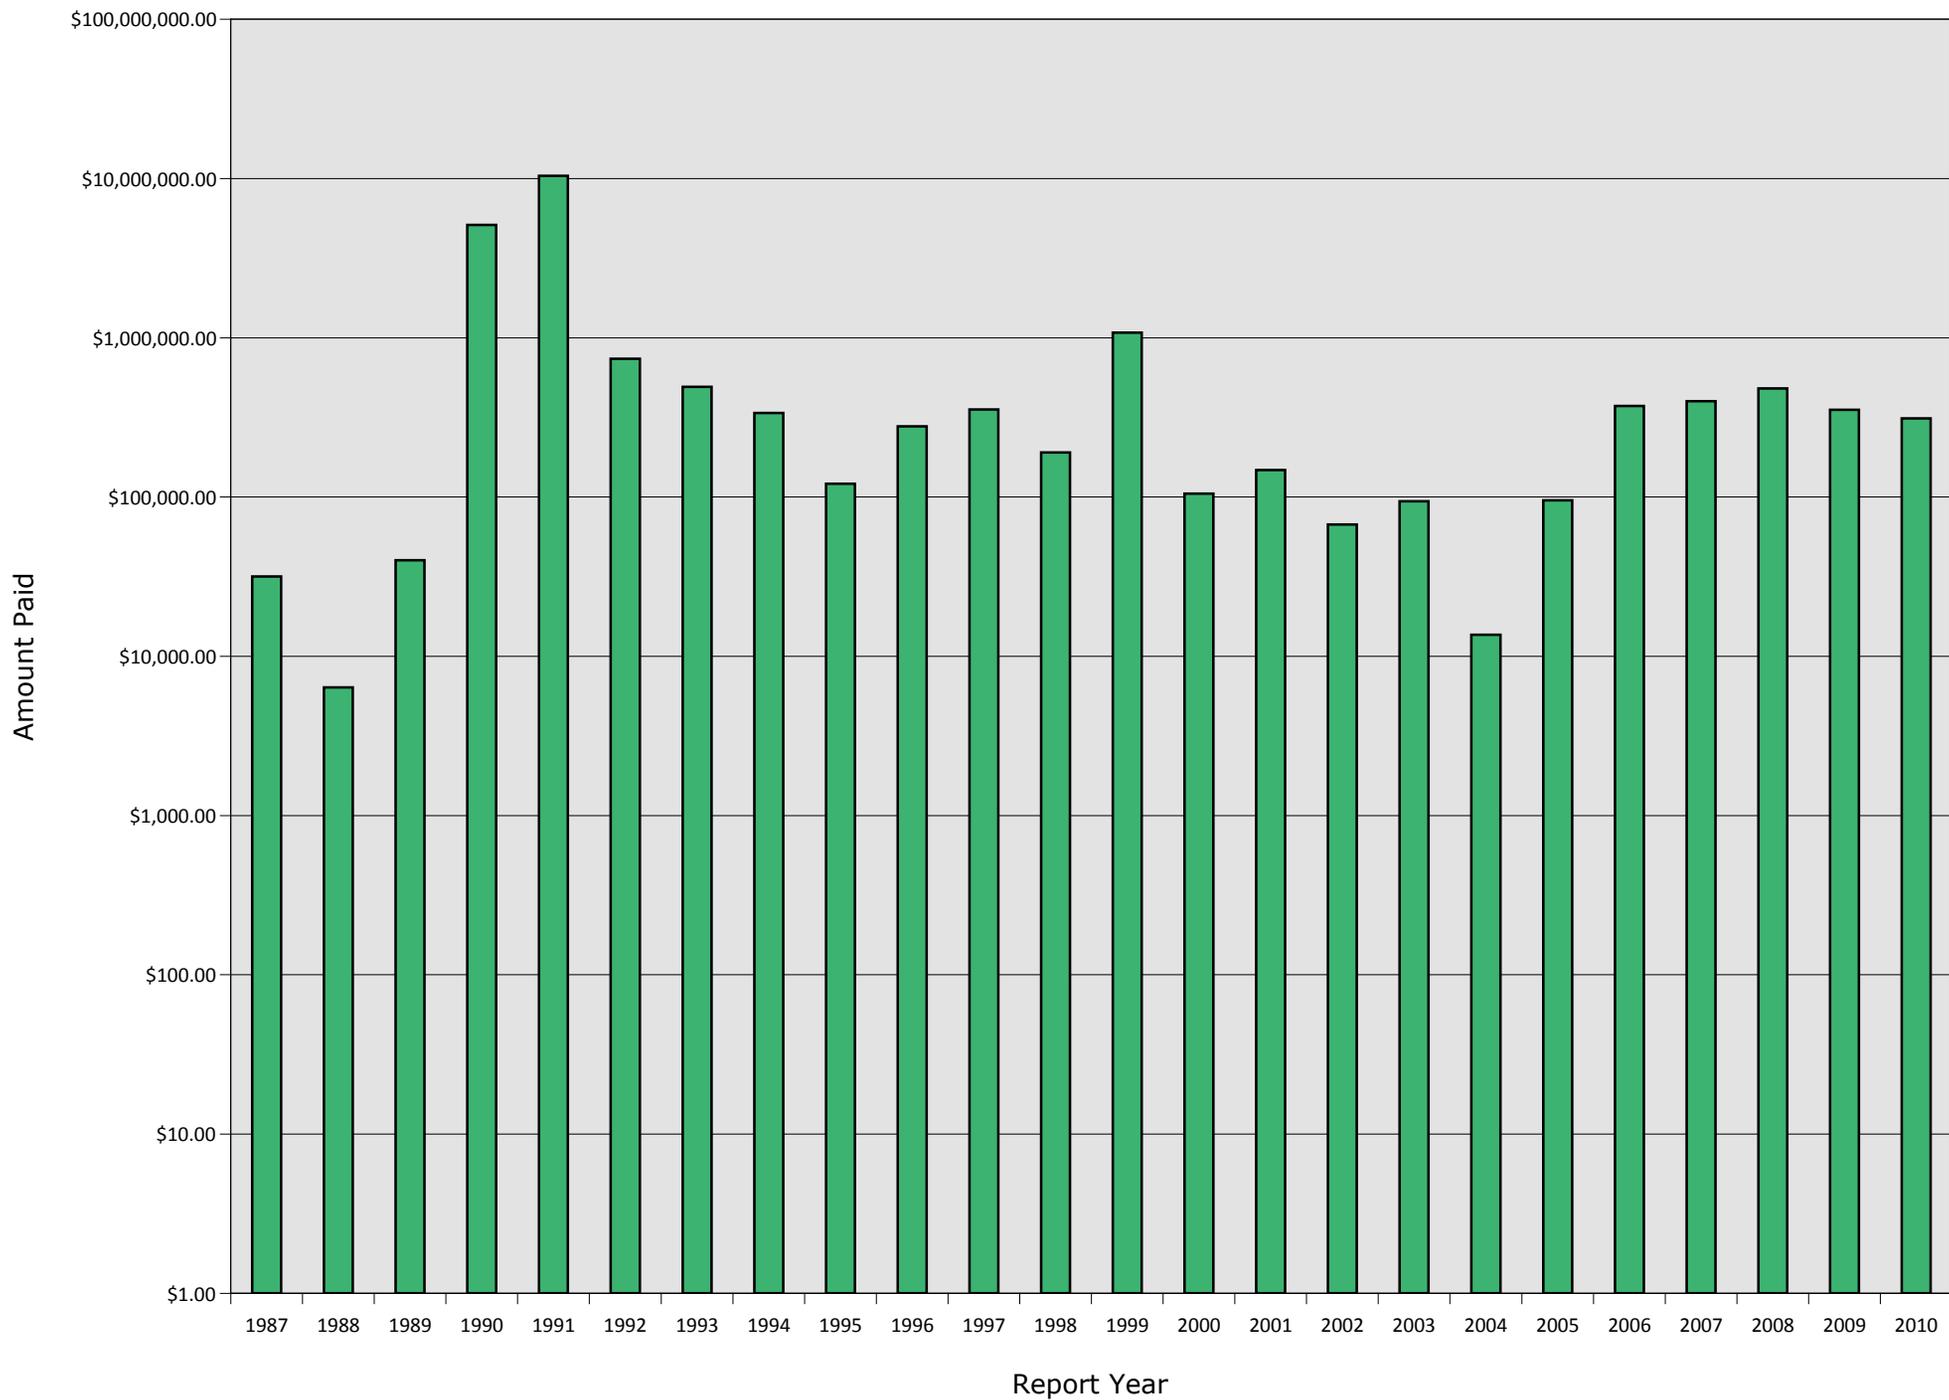

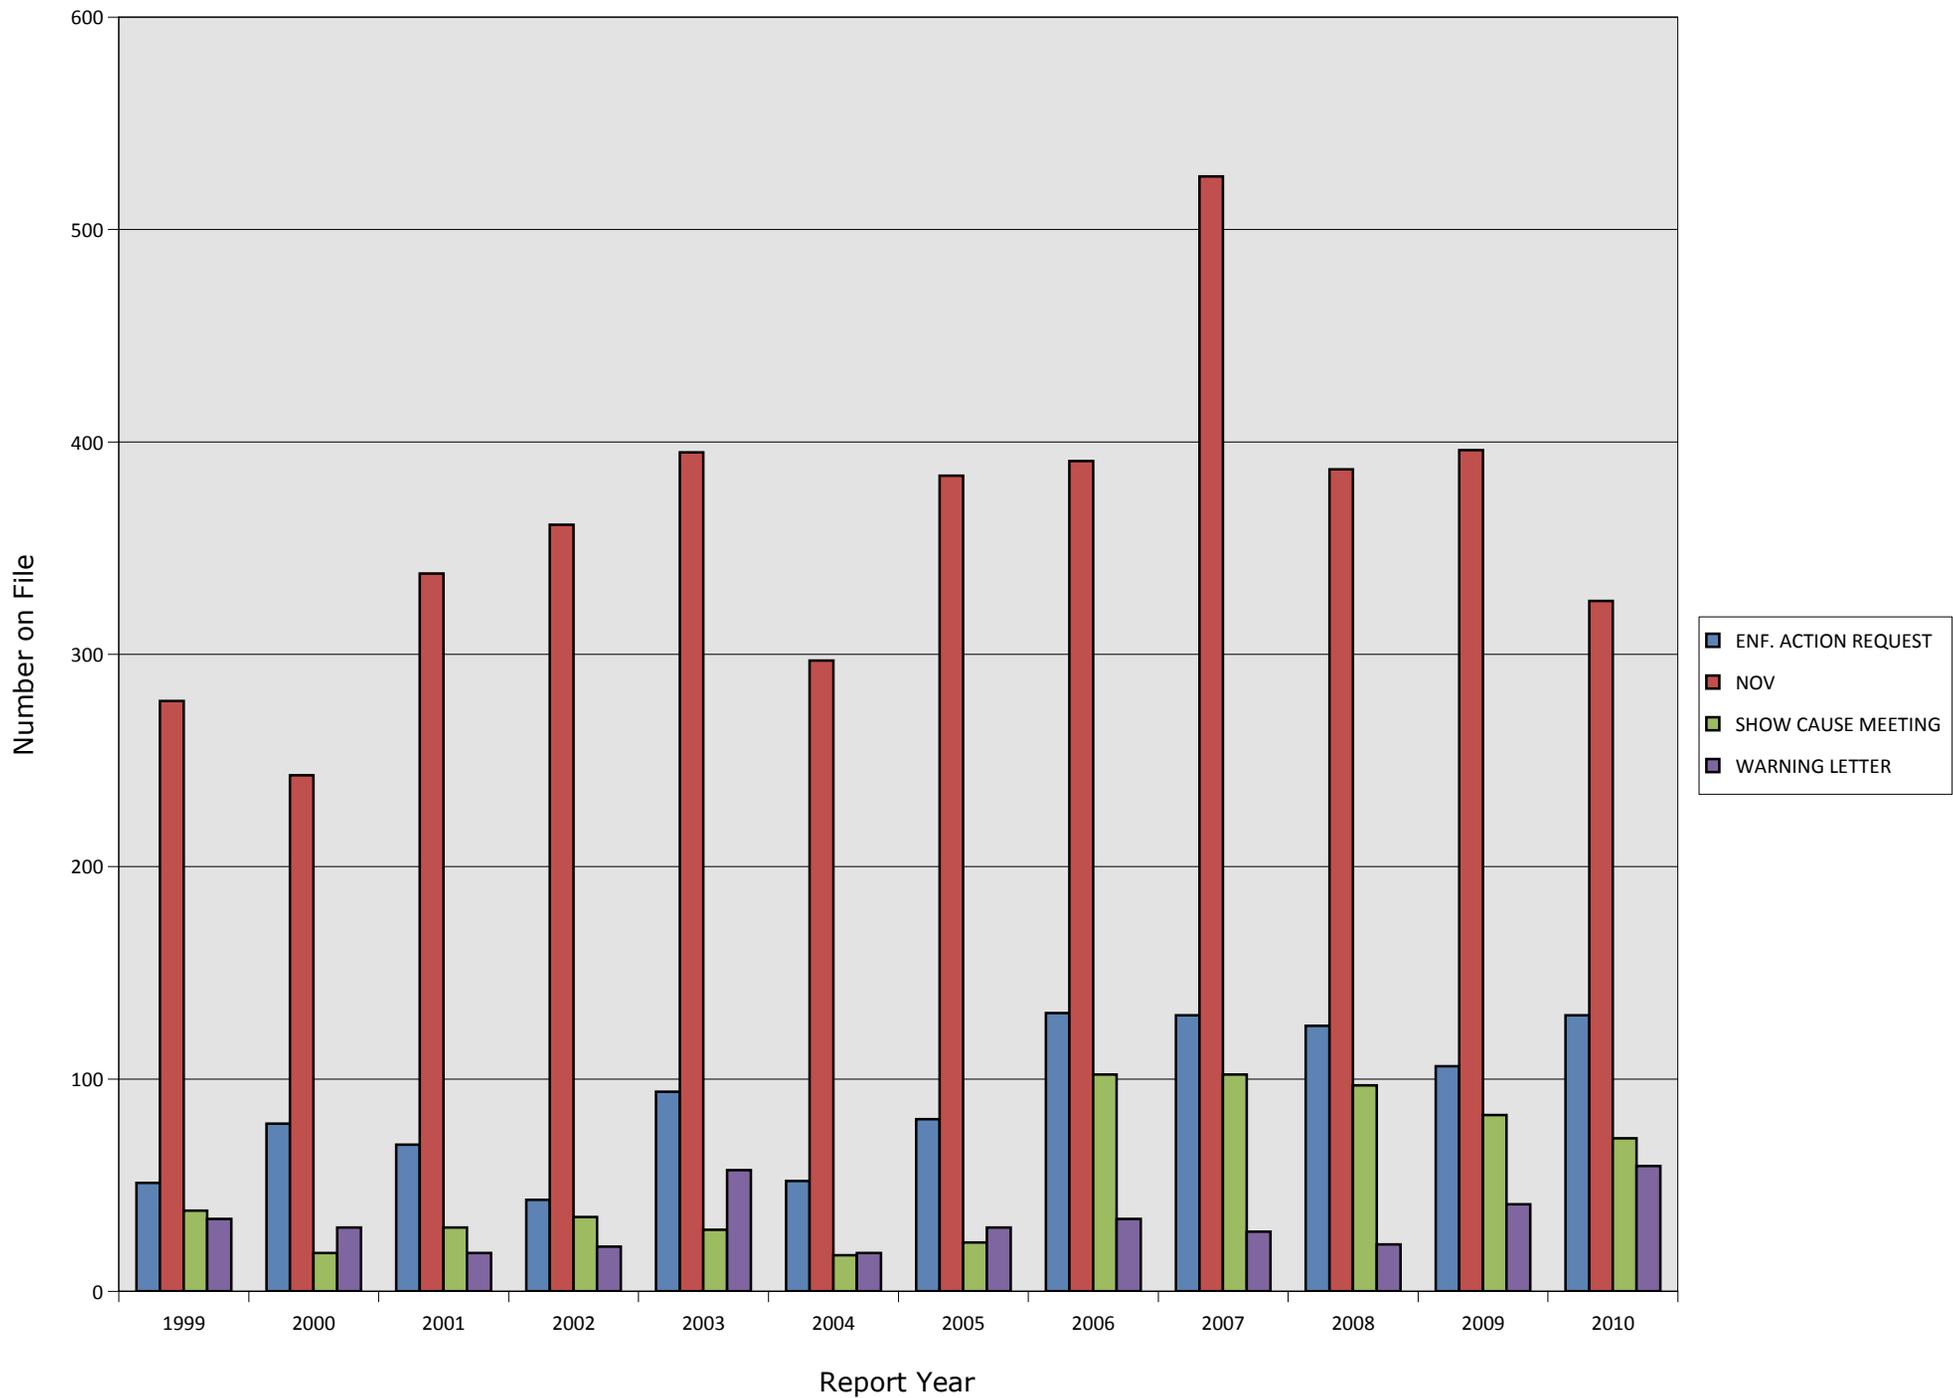

⇒ **Waste Reduction**

The Tennessee General Assembly passed the Hazardous Waste Reduction Act in 1990. The Act required large quantity generators to prepare detailed hazardous waste reduction plans for their facilities by January 1, 1992. By March 1, 1993, these generators were to report on their implementation progress in the Report Year 1992 Hazardous Waste Annual Report submission. The Act also required small quantity generators to write similar plans by January 1, 1994, and to report their implementation efforts by March 1, 1995. A voluntary goal of 25% reduction in the generation of hazardous waste was set by the Act.

Number of years with values not out of the +30 to -30 range. Values outside this range are considered in error. 20

Average Change From Year to Year 0.7 %

1985- At the program's inception, there were challenges to getting the data into a system and format that could be analyzed. Previous Year was zero.  
 1986- There are notes in the file concerning this value. The programmer, H. Bentrup indicates he was uncertain why this was so low.  
 1987- Since we are comparing current to former years, two years are always affected when the data for one is in question.  
 1999 and 2000 - Data and collection affected by death of original programmer for the HW Program, H. Bentrup and the transition to a new system.

⇒ **Waste Reduction (continued)**

It is difficult to understand how the multiyear generation of hazardous waste reflects the impact of the Hazardous Waste Reduction Act of 1990. For instance, a check of the annual economic report: *An Economic Report To The Governor of The State Of Tennessee*, indicates cross quarter growth, on the average, is very similar to the overall annual percentage increase in the generation of hazardous waste in Tennessee. It may be difficult to quantify the reasons for fluctuations in hazardous waste generation across specific manufacturing groups. It is likely that global, national, and or local economic factors weigh heavily on these figures. To get an understanding of how certain factors affect Waste Reduction, specific codes were developed to allow the reporting community to report standardized reasons for identifying Reduction Efforts and Reduction Impediments. These values are depicted graphically on Page 5-2 and 5-3.

This average percentage of Manufacturing Job Growth was chosen as a comparison to verify the change in hazardous waste generation change due to the likelihood of the relation of the two. An average comparison of several quarters of Manufacturing Job Growth is about 1.23%. This compares favorably with the multi-year change in hazardous waste generation of about 1.1%. Perhaps a conclusion can be made that the two values are closely linked.

⇒ **Waste Reduction (continued)**

Methods for achieving waste reduction divide conveniently into two basic types: source reduction and recycling. Source reduction is any action that reduces the amount of waste exiting a process. Source reduction measures include

- Modifications to equipment or technologies.
- Modifications to processes or procedures.
- Reformulation or redesign of products.
- Substitution of raw materials.
- Improvements in housekeeping, maintenance, training or inventory control.

Recycling is the use, reuse or reclamation of a waste, either on or off site, after it is generated.

Recycling methods include:

- Using or reusing a waste as a substitute for a commercial product.
- Reusing a waste in order to delay the purchase of new commercial product.
- Removing contaminants from a waste to allow its reuse.
- Reclaiming useful constituents from within a waste material.

Tennessee has developed the following categories for reporting (by waste stream) on the Hazardous Waste Reduction Plan for each reporting entity. These categories are presented here as responses submitted by the regulated community on Annual Reports for the current Report Year.

<b>Figure 12 - Waste Reduction Efforts for Current Report Year</b>		<b>2010</b>	
a REFORMULATION / REDESIGN OF PRODUCT	162	4.1 %	
b IN-PROCESS RECYCLING OR PROCESS MODIFICATION	422	10.7 %	
c EQUIPMENT / TECHNOLOGY MODIFICATION	287	7.3 %	
d SUBSTITUTING RAW MATERIALS	191	4.9 %	
e IMPROVED OPERATIONS	972	24.8 %	
f REDUCTION RESEARCH / PLANNING	885	22.5 %	
g NO EFFORT	887	22.6 %	
h OTHER	120	3.1 %	

<b>Figure 13 - Waste Reduction Impediments for Current Report Year</b>		<b>2010</b>	
a TRAINING OR TECHNICAL ASSISTANCE	167	4.8 %	
b TECHNICAL FEASIBILITY	1377	39.5 %	
c ECONOMIC PRACTICALITY	277	8.0 %	
d MEASUREMENT / ACCOUNTING	93	2.7 %	
e TENNESSEE HAZARDOUS WASTE REGULATIONS	50	1.4 %	
f IMPLEMENTATION PREVIOUS EFFORTS	109	3.1 %	
g HIGH COSTS OF HW MANAGEMENT	46	1.3 %	
h ACCIDENTAL GENERATION	304	8.7 %	
i OTHER	1061	30.5 %	

**⇒ Waste Reduction (continued)**

Waste Reduction responses are further defined:

**Waste Reduction Efforts:**

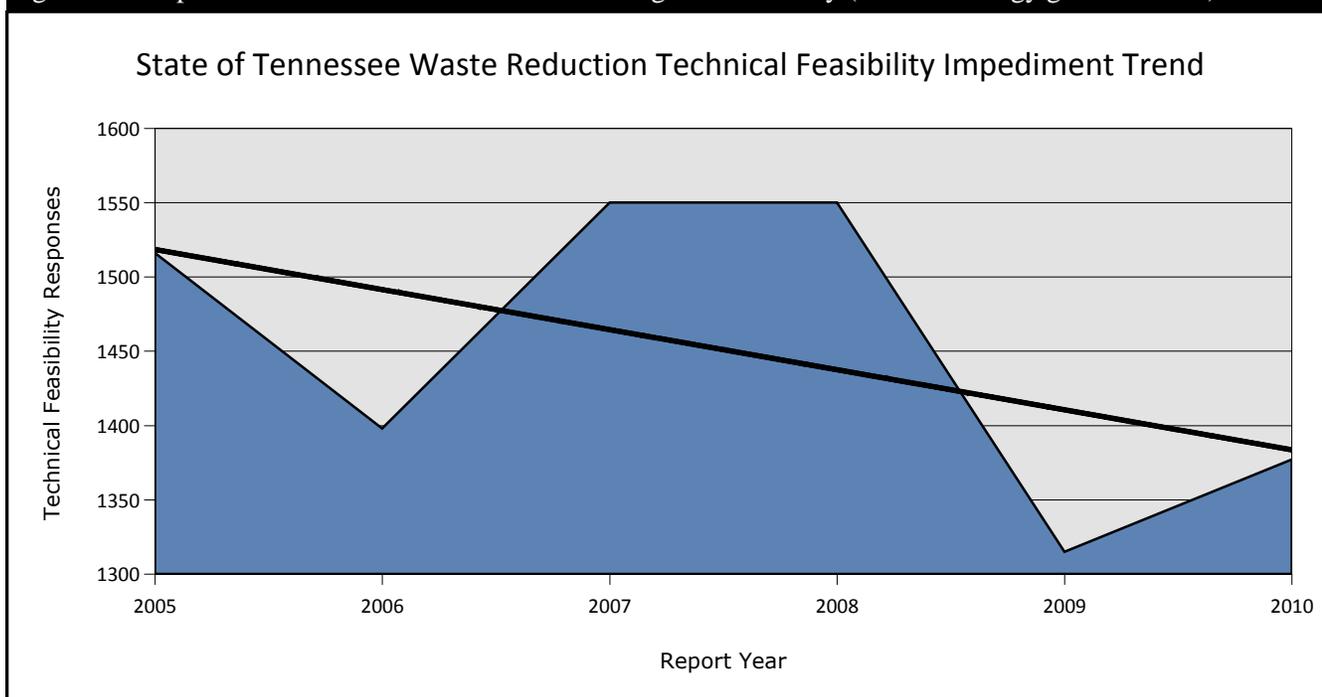

- a. **Reformulation / Redesign of Product:** An effort to reduce hazardous waste generation based on changes in design, composition, or specifications of end products that allow fundamental changes in its production.
- b. **In-Process Recycling or Process Modification:** An effort to reduce hazardous waste generation based on the redesign of the procedures of a generation process to reduce, reuse or recycle waste as an integral part of the process.
- c. **Equipment / Technology Modification:** An effort to reduce hazardous waste generation based on the redesign, retrofitting or change in equipment or incorporation of a technology to reduce the volume or toxicity of the waste.
- d. **Substituting Raw Materials:** An effort to reduce hazardous waste generation based on changes in raw materials to reduce volume and toxicity
- e. **Improved Operations** An effort to reduce hazardous waste generation based on improvement in employee training, equipment maintenance, handling of raw materials, detection and control of emissions, etc.
- f. **Reduction / Research Planning** An effort to reduce hazardous waste generation based on research or planning conducted to develop future specific waste reduction efforts.

**Waste Reduction Impediments:**

- a. **Training or Technical Assistance:** Reason given by respondents as an impediment to reducing hazardous waste generation based on funding and applicability for training and availability of staff time
- b. **Technical Feasibility:** Reason given by respondents as an impediment to reducing hazardous waste generation based on problems with reformulation or redesign of a product; in-process recycling or equipment modification etc.
- c. **Economic Practicality:** Reason given by respondents as an impediment to reducing hazardous waste generation based on recovery of cost of changing a process or availability of capital versus ability to recover the investment
- d. **Measurement / Accounting:** Reason given by respondents as an impediment to reducing hazardous waste generation based on ability to consistently and accurately measure generation amounts to identify direct and indirect costs
- e. **Tennessee Hazardous Waste Regulations:** Reason given by respondents as an impediment to reducing hazardous waste generation based on burdens imposed by regulations that impede flexibility to use reduction efforts
- f. **Implementation Previous Efforts:** Reason given by respondents as an impediment to reducing hazardous waste generation based on feedback from previous reduction efforts
- g. **High Costs of Hazardous Waste Management:** Reason given by respondents as an impediment to reducing hazardous waste generation based on the expense of transportation, on site handling as well as cost of insurance
- h. **Accidental Generation:** Reason given by respondents as an impediment to reducing hazardous waste generation due to an unplanned generation event, spill etc
- i. **Other:** Reason given by respondents as an impediment to reducing hazardous waste generation due to reasons that are not heretofore cataloged; some of the reasons given are:
  - "Waste Generation Was Based on Sales."
  - "This is an Insignificant Waste Stream."
  - "Goal ratio based on higher production forecast. Production has decreased."
  - "Waste Stream is generated by quality control as required by our customers."
  - "Disposal of old chemicals. No future generation anticipated."
  - "Cannot Control the Product Design of Our Customers."
  - "One Time Generation Due to Flood."
  - "Cannot Reduce Waste Generation Any Further."

⇒ **Waste Reduction (continued)**

Figure 14 - Impediment Reduction Trend for Technological Feasibility (Has technology gotten better?)

The general trend may be measurable on a year by year basis and while we have data for that, it stands to reason that some long term trends may be affected simply by innovations in handling, technology and chemistry, etc. The above graph, *Impediment Reduction Trend for Technological Feasibility (Has technology gotten better?)* attempts to explain that possibility by looking at a 5 year trend for the responses (of impediments) termed Technological Feasibility. Could it be that some things that were not Technically Feasible in say, 2005, may certainly be Technically Feasible now? It is not known if the trend line on the graph accurately reflects or explains this possibility as there may be many other factors involved. Also, this data is highly subjective allowing the respondents to further explain their choices in free-form description fields which are not easily cataloged.
