¹ Number of respondents who said they had participated in high-risk behavior in the past year. Survey inquires about intravenous drug use, treatment for sexually transmitted or venereal disease, giving or receiving money or drugs in exchange for sex, and anal sex without a condom.

² Weighted risk is the estimated percentage of adult population aged 18-64 who have participated in high-risk behavior based on the survey.

³ Population at risk is the estimated population aged 18-64 who have participated in high-risk behavior based on the survey. Note: The sum of regional estimates in this column will not add up to statewide total.

⁴ Statewide estimates include additional survey coverage by cell phone and different weighting methodology.
