TDH – West Tennessee Pandemic Influenza Response Plan-Draft

I. Lead Agency:

The Tennessee Department of Health (TDH) is the lead state agency for the response to a pandemic. Its plan is part of the Tennessee Emergency Management Plan (TEMP). TDH is responsible for establishing uniform public health policies for pandemic influenza response. Such policies include the establishment of criteria for implementing and rescinding social distancing measures (e.g., school or business closure), prioritizing recipients of vaccines and antiviral medications, and legally altering acceptable standards of health care or medical licensure requirements. When a pandemic is imminent, an emergency will be declared and the TEMP will be activated.

The West Tennessee Regional Health Office (WTRO) is responsible for implementing state public health response policies once the TEMP is activated. Regional health departments that oversee multiple counties will work with their county health departments to implement response policies; the relationship between county and regional health departments in the oversight of implementation will vary depending on the capacity of the county health department. Regional health departments will be the primary points of contact for the communication of state public health response policies from TDH to the county level.

Regional health departments are specifically responsible for the following tasks:

1. Developing continuity of operations plans for essential public health services, as defined by the TDH;
2. Timely collection (and interpretation) of regional surveillance data;
3. Assuring that appropriate laboratory specimens from ill persons are collected and shipped by public health or private medical personnel (in collaboration with the state public health laboratory), in accordance with state and national laboratory testing guidance;
4. Detection, response and control of initial cases of novel or pandemic influenza infection in humans, in collaboration with the state health department;
5. Response to human exposure to animal influenza viruses with pandemic potential during the pre-pandemic period (WHO Phases 3-5), in collaboration with the state health department;
6. Administration of prophylactic antiviral medication (WHO Phases 3-5 only) as indicated by national or state policy;
7. Pandemic vaccine storage, administration, and data collection, as required by state and/or federal health officials;
8. Antiviral medication storage, distribution (per Strategic National Stockpile protocols) and tracking, in conjunction with acute care hospitals where antivirals are administered;

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

9. Communication with regional outpatient and inpatient health care facilities, long-term care facilities, and with the public, using messages coordinated with state public health officials;
10. Implementation of social distancing measures under the direction of the state health department;
11. Assuring the continuity of essential operations at regional and county health departments;
12. Addressing the psychosocial needs of the public health workforce during a pandemic; and,
13. Communicating to the public how to access social support services available in their area during a pandemic.

The regional and county health departments will work together to collect and interpret local surveillance data. Local staff may be asked to assure that laboratory specimens from ill persons are collected properly and shipped in accordance with state guidance. Local health departments may be asked to support influenza containment measures including isolation, quarantine, contact tracing efforts and social distancing measures. If administration of prophylactic antiviral medications is indicated or ordered, local staff may be asked to participate in this process. Local health departments may also be asked to store, track and administer vaccine as it becomes available. Local health departments will be responsible for communication with local leaders and healthcare providers using messages coordinated with state and regional health officials. Local staff will also communicate with the general public regarding how to access local social support services. (See Section 8)

II. Support Agencies

Support agencies that would work with the Regional Public Health Office in the management of pandemic influenza within West Tennessee include:

State Agencies

TEMA – West TN Regional Office
1510 Hwy 70 Bypass
Jackson, TN 38305
1-800-322-7341 or 731-421-5018

The West Tennessee Regional Office of the Tennessee Emergency Management Agency (TEMA) will coordinate with the State Emergency Operations Center to assure access to resources that are not available at the local or regional level as described in the Tennessee Emergency Management Plan (TEMP).

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Regional Agencies

1. Southwest Community Services Agency (SWCSA)
6 Stonebridge Blvd., Suite G
Jackson, TN 38305
731-984-9030
731-664-4623 (fax)

The SWCSA is responsible for food and oversight of essential services for patients referred by the WTRO in the following counties: Chester, Decatur, Hardeman, Hardin, Haywood, Henderson, Fayette, Lauderdale, McNairy and Tipton.

2. Northwest Community Services Agency (NWCSA)
1604 Reelfoot Ave.
Union City, TN 38261
731-884-2640
731-884-2644 (fax)

The NWCSA is responsible for food and essential services for patients referred by the WTRO in the following counties: Benton, Carroll, Crockett, Dyer, Gibson, Henry, Lake, Obion and Weakley.

3. Southwest Human Resource Agency (SWHRA)
1527 White Ave.
Henderson, TN 38340
731-989-5111

The SWHRA will assist with the provision of transportation and food delivery to homebound patients in the following counties: Chester, Decatur, Hardeman, Hardin, Haywood, Henderson, Fayette and McNairy.

4. Northwest Human Resource Agency (NWHRA)

Northwest HRA
124 Weldon Dr.
Martin, TN 38337
731-587-4213

The SWHRA will assist with the provision of transportation and food delivery to homebound patients in the following counties: Benton, Carroll, Crockett, Dyer, Gibson, Henry, Lake, Obion and Weakley.

5. Delta Human Resource Agency

Delta HRA
919 Hwy 51 S

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Covington, TN 38019
901-476-5226

Delta HRA
198 S. Washington St.
Ripley, TN 38063
731-635-1931

The Delta HRA will assist with the provision of transportation and food delivery to homebound patients in the following counties: Lauderdale and Tipton.

Local Agencies

1. General Sessions Judges

Following a hearing, local judges may be asked to issue a court-ordered public health measure or temporary hold if the actions of a person are considered a public health threat. Such an order should be undertaken with the consultation of local and regional public health officials.

2. Law Enforcement Agencies

Upon issuance of a court order, local law enforcement may be asked to enforce the provisions of a public health measure or temporary hold. Law Enforcement will also be asked to provide additional security for public health clinics and vaccination centers.

3. Mayors/County Commissions

Local mayors and/or commissions will be asked to assist with public education activities related to social distancing measures.

5. Local Education Agencies (LEA's)

Local Education Agencies will be responsible for the closure of facilities or suspension of school activities in order to support social distancing measures.

6. Local Emergency Management Agencies (EMA's)

Local Emergency Management Agencies will be asked to provide resources related to logistics and/or security required to support local response efforts.

7. Local Chambers of Commerce

Local Chambers of Commerce will be asked to communicate with local businesses and industry via messages coordinated with regional health officials.

8. Local Colleges and Universities

Local colleges and universities will be asked to communicate with students and faculty via messages coordinated with regional health officials.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

9. Local Religious Institutions

Local religious institutions will be asked to communicate with their congregations using messages coordinated with regional health officials.

10. Local Coroners and Medical Examiners

Local coroners and medical examiners will be asked to coordinate with area hospitals regarding mass fatality planning and response.

11. Local Health Departments

- Lead local preparedness efforts.
- Collaborate with the regional office to ensure consistent communication with the public and healthcare providers.
- Provide surveillance and community education in collaboration with the WTRO.
- Coordinate any local dispensing of pharmaceuticals and vaccines.
- Work with other government agencies to implement control measures.
- Collaborate with health care providers to provide information about access to health care and social support services.

III. Purpose

The purpose of this plan is to provide an evidence-based framework for the public health response to pandemic influenza or an influenza strain with pandemic potential. During a pandemic or outbreak of a novel influenza virus with pandemic potential, this document will serve as the Regional Pandemic Influenza Response Plan (RPIRP). The RPIRP serves as an operational annex to the WTRO Emergency Operations Plan.

IV. Situation

Novel influenza viruses periodically emerge to cause global epidemics, known as pandemics, either directly from a mutated animal influenza virus or out of combination of an animal virus with a circulating human influenza virus. Such viruses circumvent normal immune defenses and cause morbidity and mortality at higher rates than seasonal influenza strains; compared to seasonal influenza, a larger proportion of deaths occur in persons aged <65 years.

Novel influenza viruses that cause pandemics are transmitted from person to person in the same manner as seasonal influenza: typically, by mucosal inoculation with large respiratory droplets caused by coughing or sneezing or by touching contaminated environmental surfaces and subsequently touching one's mouth, nose or eyes. Ten pandemics have occurred in the past 300 years; there is historical evidence of the success or failure of various strategies to contain or control the spread of influenza. With the exception of a vaccine, antiviral medication, and advanced medical care, many of the strategies used to respond to a modern pandemic are the same as the effective measures of previous generations. For example, though the compulsory restriction of movement in or out of certain regions, known as "cordon sanitaire," was not effective in any but the world's most remote island communities, broad community strategies used to reduce dense social contact were effective and the failure to use such strategies was devastating.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

The key activities to minimize the impact of a pandemic influenza virus are:

1. Surveillance for disease activity for situational awareness and timely activation of response strategies;
2. Accurate communication within and among volunteer and professional responding organizations and with the general public;
3. Use of social distancing measures to reduce unnecessary close contacts during a pandemic wave; and,
4. Distribution and use of all available medical resources and personnel.

Pandemic Threat Categories Defined by World Health Organization (WHO):

The duration of each period or phase is unknown, but the emergence of pandemic viruses is considered inevitable.

PERIOD	PHASE	DESCRIPTION
Interpandemic No human cases of novel influenza virus	1	No animal influenza viruses circulating with the potential to infect humans
	2	Animal influenza virus is circulating with the potential to infect humans
Pandemic Alert Human cases with increasingly efficient human-to-human spread	3 (May 2006)	Human cases with rare or no human-to-human spread
	4	Small clusters caused by human-to-human spread
	5	Large regional clusters caused by human-to-human spread
Pandemic Worldwide epidemic	6	Geographically widespread and efficiently spread from human-to-human

V. Planning Assumptions:

A. Basis of plan:

1. The plan is based upon a pandemic of the severity of the 1918-1919 influenza pandemic; public health interventions described herein represent maximal interventions under these conditions. If the characteristics of the actual event do not reflect planning assumptions, responses will be modified accordingly.
2. While focusing primarily on the response to a pandemic (WHO Phase 6), the plan also addresses the response to imported or acquired human infections with a novel influenza virus with pandemic potential during the Pandemic Alert Period (WHO Phases 3-5).

B. Objectives of pandemic planning:

1. The primary objective is to minimize morbidity and mortality from disease.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

2. Secondary objectives are to preserve social function and minimize economic disruption.

C. Assumptions for state and local planning:

1. The plan reflects *current* federal, state and local response capacity and will be revised annually in light of changes in capacity or scientific understanding.
2. Tennessee state and local pandemic plans should be consistent with each other and with federal guidelines unless these guidelines fail to reflect the best available scientific evidence.
3. Public education and empowerment of individuals, businesses, and communities to act to protect themselves are a primary focus of state and local planning efforts; the government's capacity to meet the needs of individuals will be limited by the magnitude of disease and scarcity of specific therapeutic and prophylactic interventions and the limited utility of legal measures to control disease spread.

D. Disease transmission assumptions:

1. Incubation period averages 2 days (range 1-10; WHO recommends that, if quarantine is used, it be used up to 7 days following exposure).
2. Sick patients may shed virus up to 1 day before symptom onset, though transmission of disease before symptoms begin is unusual. The peak infectious period is first 2 days of illness (children and immuno-compromised persons shed more virus and for a longer time).
3. Each ill person could cause an average of 2-3 secondary cases if no interventions are implemented.
4. There will be at least 2 "waves" (local epidemics) of pandemic disease in most communities; they will be more severe if they occur in fall/winter.
5. Each wave of pandemic disease in a community will last 6-8 weeks.
6. The entire pandemic period (all waves) will last about 2 years before the virus becomes a routine seasonal influenza strain.
7. Disease outbreaks may occur in multiple locations simultaneously, or in isolated pockets.

E. Clinical assumptions during the entire pandemic period (from federal planning guidance issued in November 2005):

1. All persons are susceptible to the virus.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

2. Clinical disease attack rate of $\geq 30\%$ (range: 40% of school-aged children to 20% of working adults).
3. 50% of clinically ill (15% of population) will seek outpatient medical care.
4. 2%-20% of these will be hospitalized, depending on virulence of strain.
5. Overall mortality estimates range from 0.2% to 2% of all clinically ill patients.
6. During an 8-week wave, ~40% of employees may be absent from work because of fear, illness or to care for a family member (not including absenteeism if schools are closed).
7. Hospitals will have $\geq 25\%$ more patients than normal needing hospitalization during the local pandemic wave.

F. Estimate of burden of illness in rural West Tennessee (derived from national estimates from 2005 HHS planning guidance):

Characteristic	Moderate	Severe
Illness (30%)	153,148 [30% of pop]	153,148 [30% of pop]
Outpatient Care	76,574 [50% of ill]	76,574 [50% of ill]
Hospitalization	1,531 [1% of the ill]	16,846 [11% of the ill]
ICU Care	230 [15% of hosp]	2,527 [15% of hosp]
Mechanical Ventilation	115 [50% of ICU]	1,264 [50% of ICU]
Deaths (Case fatality rate)	306 (0.2%) [of ill]	3,063 (2%) [of ill]

G. Assumptions about the Pandemic Alert Period (WHO Phases 3-5):

1. During the pandemic alert period, a novel influenza virus causes infection among humans who have direct contact with infected animals and, in some cases, through inefficient transmission from person to person. By definition, during the Pandemic Alert Period, cases are sporadic or limited in number with human-to-human spread not yet highly efficient. Limited clusters of disease during this period can be quenched with aggressive steps to stop spread and treat infected individuals.
2. Individual case management will be conducted during the Pandemic Alert Phase. Isolation or quarantine, including the use of court orders when necessary, would be employed to prevent further spread of the virus.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Antivirals would be used during this time for post-exposure prophylaxis or aggressive early treatment of cases (supplies permitting).

3. Efforts to identify and prevent spread of disease from imported human cases and from human cases resulting from contact with infected animals will continue until community transmission has been established in the United States. Community transmission is defined as transmission from person to person in the United States with a loss of clear epidemiologic links among cases. This may occur some time after the WHO declares that a pandemic has begun (WHO Phase 6).

VI. Concept of Operations:

A. WHO Phases 3-5 (Pandemic Alert Period):

The lead agency for addressing influenza disease among animals at the level of the state is the Department of Agriculture (described in TEMP Emergency Support Function [ESF] 11). TDH will provide support to the Department of Agriculture in the prevention of human infections and in surveillance and management of human disease as it pertains to contact with infected animals.

The TDH is the lead state agency for responding to human influenza disease caused by a novel influenza virus with pandemic potential, whether imported from an area with ongoing disease transmission or acquired directly from an animal in Tennessee. The State Health Operations Center (SHOC) would be set up, depending upon the scope of and duration of the situation. *See the 2006 Tennessee Department of Health Pandemic Response Plan Section 7, Supplement 2, for isolation and quarantine guidelines during the Pandemic Alert Period.* Guidance for hospital management and investigation of cases during the pandemic alert period is located in Section 4. The CDC will provide additional support and guidance regarding human infection management during this period.

The primary activities during this period are surveillance for imported cases or cases contracted from contact with infected animals. Regional health departments will aggressively investigate any detected cases with the assistance of TDH and contacts are to be identified, quarantined, and treated, as appropriate. The objective is to stop the spread of the virus into the general community.

B. WHO Phase 6 (Pandemic):

The lead state agency for the public health response to a pandemic is the Department of Health, working in collaboration with regional health departments. The state and regional health department response will be conducted in collaboration with federal response agencies; primarily, the

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Department of Health and Human Services (HHS) and Department of Homeland Security (DHS).

The primary activities are surveillance for disease, communication, implementation of general social distancing measures, support of medical care services, appropriate use of available antiviral medications and vaccines, and response workforce support. The state TDH is primarily responsible for communication with federal health authorities and creating statewide pandemic response policies; the implementation of response measures is the responsibility of local communities and regional public health authorities. Operational details are outlined in the operational sections of the regional health department pandemic plan.

Section Summaries:

Regional public health pandemic response policies are outlined in the attached sections. Each section may include attachments, or supplements, as necessary. Each section is briefly described below.

Section 1 Continuity of Operations

This section describes how the regional health department will maintain essential services during a 12-18 month pandemic period, as well as, during a 6-8 week local wave. The section specifically addresses plans to maintain operations with reduced staffing levels.

Section 2 Disease Surveillance

This section describes how regional influenza surveillance strategies will be used to monitor for early infections caused by a novel influenza virus with pandemic potential and to track and respond to the spread of influenza during a pandemic.

Section 3 Laboratory Diagnostics

This section describes regional procedures for laboratory testing and results reporting for novel influenza viruses. This section also describes the important role of the CEDS physician in the testing process.

Section 4 Healthcare Planning

This section outlines the details of healthcare provision during an influenza pandemic. The section focuses on infection control and the role of the WTRO in supporting the resource needs of regional hospitals.

Section 5 Vaccine Distribution and Use

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

This section describes the principles of regional vaccine use. Vaccine will be administered to people according to priority groupings designated by the federal government. All vaccinations will be provided at designated public health facilities and will be recorded and reported as required.

Section 6 Antiviral Drug Distribution and Use

This section describes policies for the use of antiviral drugs to prevent spread of novel influenza virus outbreaks with pandemic potential and to treat patients during a pandemic. In response to isolated cases of novel influenza virus, caused by contact with a sick animal, antiviral medications will be provided in accordance with national policies at the time.

Section 7 Community Interventions

This section outlines social distancing and other community interventions that may be implemented to respond to isolated cases of illness caused by a novel influenza virus with pandemic potential and during a pandemic. The criteria for the implementation of social distancing strategies will be uniform across the state. Standard measures will be implemented in a county and in neighboring counties when laboratory and epidemiological evidence demonstrates the presence of the virus circulating in a county.

Section 8 Public Health Communications

This section outlines the communications goals and strategies of public health to meet the information needs of the general public, ill persons who are isolated or exposed persons quarantined at home, media, medical community and other response partners.

Training:

Plans will be drilled in partnership with other stakeholders and updated to correct weaknesses identified through these exercises.

WTRO	West Tennessee Regional Public Health Office

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Section 1. Continuity of Operations

I. Purpose

To describe how the WTRO will minimize illness among employees and patients while maintaining mission-critical operations and services.

II. Assumptions

Certain critical public health functions must be maintained during a pandemic. If critical staff shortages occur, the delivery of other non-essential services may be temporarily suspended. Regional administrative staff may also be assigned to augment local health department staff to support essential service delivery. All employee job plans include language requiring them to work other duties as assigned during a disaster. All personnel will have a role in continuing essential services of the department, even if their routine activities are temporarily suspended.

III. Concept of Operations

Family Planning Services

Family planning services shall be limited in the event of pandemic flu. The following services will **not** be provided:

- Initial family planning appointments (that is, there will be no new family planning clients enrolled during the pandemic)
- Annual family planning examinations
- Walk-in (i.e., without a screening telephone interview, see below) reproductive health, medical complaint exams (i.e., vaginal itching)
- Pregnancy testing (explanation below)
- Walk-in (i.e., without a scheduled appointment or without a telephone interview – see below) family planning appointments for any reason including re-supply of method.
- There will be no method changes during pandemic flu other than changes in brand of oral contraceptives.
- There will be no IUD insertions during pandemic flu.

Title X family planning clients will **not** be given prescriptions for their method. Only those clients with third party payors (i.e., TennCare) can receive prescriptions for their method.

Clients who believe they may be pregnant can call the clinic for basic information about early pregnancy. They could be directed to the health department website if they have internet access. During pandemic flu, all persons will be limiting exposure to large groups of people. Pregnant women are at particular risk and should be especially careful about being in public areas. As soon as public health officials announce that risks are decreasing, pregnant women should report to their health care provider or health department clinic.

The following limited family planning services for combined hormonal contraceptives and progestin-only pills will be provided:

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

- Following a telephone conversation with a registered nurse, nurse practitioner, or physician to screen history for contraindications, side effects, or new adverse events, client will be approved to receive up to a one year supply of combined oral contraceptives, contraceptive rings, contraceptive patches or progestin-only pills. Amount of supply to be dispensed is to be determined by the RN, FNP, or physician.
- Old dispensing orders (i.e., 3 packs and 10; or 3, 4, and 6 etc.) are superseded to assure that the individual has an adequate supply of the method throughout the pandemic.
- Telephone conversation will include instructions regarding proper storage of the method.
- The client or a person designated by the client will pick up their supply at the front desk after showing identification and signing a receipt.
- Blood pressure check will not be required.
- Written client instructions including storage instructions will be included with the supply.
- Condoms will be included with the method.
- Treatment with ECPs for 2 events of unprotected intercourse and a client instruction sheet will be included with the method.
- In the unlikely event of a serious adverse event related to the method, the client will be instructed to report to the nearest emergency room.
- All of the above and the transaction itself will be noted in the client record.

The following limited family planning services for progestin-only injections will be provided:

- Following a telephone conversation with a registered nurse, nurse practitioner, or physician to screen history for contraindications, side effects, or new adverse events, client will be approved to report to the clinic for a progestin-only injection. Medical staff should minimize the visit and limit the time the client needs to be in the clinic for the injection. Client may be approved to receive a supply of up to one year of injections with injection supplies if the client can give her own injection or has access to someone who can give her the injection. The clinic will **not** teach the client or her designee how to give the injection during this crisis. But, if in the opinion of the nurse, nurse practitioner or physician, the client has access to a safe mode of administration outside the health department, then she can be given the necessary doses and injection materials.
- Old dispensing orders are superseded to assure that the individual has adequate family planning supplies throughout the pandemic.
- Telephone conversation will include instructions regarding proper storage of the method if the client will be receiving injections at home.
- The client or a person designated by the client will pick up the supply (assuming self-administration at home has been approved) at the front desk after showing identification and signing a receipt.
- Blood pressure check will not be required.
- Written client instructions including storage instructions will be included with the supply.
- Condoms will be included with the method.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

- Treatment with ECPs for 2 events of unprotected intercourse and a client instruction sheet will be included with the method.
- In the unlikely event of a serious adverse event related to the method, the client will be instructed to report to the nearest emergency room.
- All of the above and the transaction itself will be noted in the client record.

Few clients continue to use the diaphragm as their contraceptive method at this time. Diaphragm users will continue to use their current diaphragm throughout the pandemic. Supplies of contraceptive gel for use with the diaphragm can be dispensed at the front window after a telephone conversation with the nurse, nurse-practitioner or physician.

- The client or a person designated by the client will pick up the contraceptive gel supply at the front desk after showing identification and signing a receipt.
- Written client instructions including storage instructions will be included with the supply.
- Condoms will be included with the method.
- Treatment with ECPs for 2 events of unprotected intercourse and a client instruction sheet will be included with the method.
- In the unlikely event of a serious adverse event related to the method, the client will be instructed to report to the nearest emergency room.
- All of the above and the transaction itself will be noted in the client record.

The following limited family planning services for reproductive health medical complaints in an established family planning client will be provided:

- Clients with a reproductive health complaint such as vaginal itching, profuse discharge, severe pain with intercourse, fever, low abdominal pain etc. will be interviewed by a nurse, nurse-practitioner, or physician. If the staff person assesses that the client needs to be seen and if the clinic can accommodate the client and her complaint, then she can be given a time to come to the clinic for assessment and treatment. If no qualified staff persons are available to see the client, the client will be referred to the nearest emergency room. Emergency room referrals during pandemic flu should be recommended carefully given that hospital staff will be managing the seriously ill flu population.

HIV/AIDS

HIV Centers of Excellence clinics services available through the WTRO will be limited during the pandemic. Due to increased risk because of compromised immune systems in persons with HIV, the following services will be postponed until the risk has decreased:

- routine HIV counseling and testing
- annual and semi-annual Ryan White certifications
- office visits for routine follow up
- routine lab work
- non-emergency dental care

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

The following services will be provided in AIDS Centers of Excellence:

- After phone consultation with a nurse practitioner or physician, prescription refills will be sent to the Ryan White mail order pharmacy
- After phone interview with nurse practitioner or physician, patients who have been assessed and determined to need to be seen in the clinic will be given a specific appointment time in the clinic to limit the amount of time spent in clinic.
- If staff is not available to see the patient and the complaint is serious enough to warrant, the patient will be referred to the nearest emergency room. Since these patients have compromised immune systems and emergency rooms may be filled with seriously ill flu patients, a referral to an emergency room should be carefully considered.

STD

STD services will be limited in the event of pandemic flu. The following services will not be provided:

- Group education sessions
- Disease surveillance including both HIV and STDs
- Disease investigation, contact tracing, and partner notification

The following services will be provided for persons who are symptomatic:

- Following a telephone interview with a registered nurse, nurse practitioner or physician to screen history for previous STDs and symptoms, persons assessed by the staff as needing to be seen will be given a specific appointment time to limit exposure in the clinic. Treatment will be provided on site. If appropriate, partner delivered therapy will be provided.
- If no qualified staff are available to see the patient and symptoms warrant, the patient may be referred to the nearest emergency room. Emergency room referrals during pandemic flu should be carefully evaluated since emergency room staffs will be dealing with seriously ill flu population.

WIC and Nutrition Services in Health Departments

According to federal regulations WIC vouchers can be issued for 3 months at a time. We will mail vouchers as allowed by the USDA in cases of emergency. In a severe pandemic we would ask for an exception from USDA and, if granted, would issue WIC vouchers less frequently than every 3 months by mail if needed.

Tennessee TB Elimination Program (TTBEP)

1. Evaluation, diagnosis, and appropriate treatment of active TB cases and TB suspects.
 - Maintain scaled-back TB clinic operations to evaluate TB cases and suspects only (not LTBI)

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

- Provide history, physical examination, diagnosis and treatment by the TB physician
 - Provide appropriate diagnostic tests, including X-ray, sputum collection for processing in the State Lab (AFB smears, cultures), and blood tests as indicated
 - Provide pharmacy services for DOT of active TB cases/suspects
 - Provide DOT for all patients with diagnosed or suspected active pulmonary, laryngeal or pleural TB disease
 - Provide DOT for all pediatric cases
 - If staffing is severely limited, consider permitting self-administered therapy for extra-pulmonary cases *only*.
 - Report all active TB cases/suspects per routine
2. Identification, evaluation and appropriate treatment of TB contacts at highest risk for progression to active TB disease.
- Initiate contact investigation for close contacts of all AFB+ TB cases/suspects
 - Ensure that all pediatric close contacts are fully evaluated with PPD, symptom screen, physical examination, and X-ray
 - Provide self-administered LTBI treatment for all PPD+ contacts at high risk for progression to active TB disease (not medium- or low-risk pts.)
 - Provide window therapy by DOT for all PPD- close contacts under the age of 5 years

Immunization Program Services Critical Operations

During a pandemic or other protracted public health crisis, certain immunization services must be provided regularly to prevent other serious vaccine-preventable diseases. Children whose immunizations are delayed are at high risk of failing to catch up and complete their immunizations on time. Under-immunized infants are at risk for Hib meningitis, pneumococcal disease and pertussis.

During a local pandemic wave, childhood immunization clinics should be operated at least one-half to one day each week for routine immunizations; priority should be given to vaccinating children <18 months of age. Routine adult immunization services may be suspended during the local wave, though emergency immunization for adults should not be suspended (e.g., tetanus prophylaxis following a wound). Immunization clinics and waiting areas should be separate from those where ill patients may be present. Only patients and accompanying adults who are not ill should be permitted in the immunization clinic.

Primary Care Services

Primary Care Services delivered at the health department will be limited in the event of pandemic flu as follows:

- Routine follow-up of chronic illness will be postponed.
- Acute illness will be managed by phone triage and/or office visit.
- Prescriptions will be filled and/or refilled by phone, use of Express Scripts (for those who qualify), or use of patient assistance programs whenever possible. Chronic medication refills should be for 12 months if possible during pandemic flu in order to minimize visits to the health department by well persons.

Vital Records

Critical activities that must be completed within current timeframes and accuracy standards:

- Death registration.
- Issuance of certified copies of death certificates to funeral directors.
- Reconciliation of facility reports of deaths within the county against death certificates received.
- Track and obtain delinquent death certificates.
- Issue Cremation Permits.
- Issue permits for burial transit out of state (rare).

Birth Certificates

During a pandemic wave, counties should suspend local issuance of birth certificates from the State Vital Records Automated Index Retrieval System (AIRS) and refer those requesting a birth certificate to the state registry office (contact information below).

Of chief importance during a pandemic, issuance in the county involves the customer presenting in person to the health department. When customers order from the State Office via mail, telephone, or the Internet, there is no human-to-human contact.

For additional information, go to www.tennessee.gov and click on Vital Records.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Section 2: Disease Surveillance

I. Purpose

To detect and track pandemic influenza activity among humans using multiple surveillance systems.

II. Assumptions

Regional surveillance sources will be used to detect and track pandemic influenza activity in the region. Surveillance data will be used to make resource allocation and intervention decisions. Details of all surveillance systems are not provided here, because these systems are already in use. Enhanced surveillance will be conducted as requested by the State health department. Surveillance for influenza among animals, primarily domestic poultry, is the responsibility of the Tennessee Department of Agriculture.

III. Concept of Operations

A. Sentinel Provider Network (SPN)

Outpatient surveillance for influenza in the region will be supported by the SPN. The SPN consists of six public health primary care facilities that will provide data on the prevalence of influenza-like illnesses in the region. The SPN provides geographically representative coverage equal to 1 provider per 100,000 persons. The Regional Epidemiologist is responsible for recruiting private clinics to report on patient populations other than those who come to public health clinics.

Year-round weekly reporting of ILI is required of all participating sentinel providers. CEDS staff will monitor data from the sentinel provider network regularly. In the event of a pandemic or other substantive change, participating providers may be asked to change the frequency of reporting or specimen submission. Sentinel physicians will collect specimens at least monthly with weekly submissions during high activity periods.

B. Private Physician Reporting

Local physicians report to the WTRO weekly regarding the number of patients seen with ILI or a diagnosis of influenza by testing. The data is reviewed and reported in NEDSS.

C. Syndromic Surveillance

The Regional Epidemiologist receives daily reports of ED visits to the West TN Healthcare hospitals in the West Region. Hospitals include: Jackson-Madison County, Bolivar, Camden, Milan, Humboldt and Gibson. The data recorded include chief complaint, date and time of visit, patient record number, age, sex, zip code and discharge disposition. Chief complaint is a free-text entry. Using EARS software package from CDC, patients are grouped into various syndrome categories based on the chief complaint data. At present, the default grouping of symptoms into the syndrome categories is being used. The categories relevant to pandemic flu include upper and lower respiratory, fever and fever with respiratory.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Hospital data are automatically sent to a secure server in Nashville. The data are downloaded from Nashville on a daily basis and the EARS analysis is performed. Data are presented in HTML files for easy viewing.

“Flag” Investigation.

Higher than normal case counts generate “flags” in the EARS reports. Flags are classified according to three levels of sensitivity. C1 flags are the least sensitive while C3 flags are the most sensitive. A C1 flag is generated when the case count for a day is greater than the mean calculated over the previous 7 days, plus three standard deviations. A C2 flag is calculated in the same way, but uses a 2-day lag period in calculating the average. A C3 flag evaluates the previous three days against the 7 day mean. If at least two of the past three days are above the seven day mean, a flag is generated. WTRO uses C1 flags for identifying potential problems according to the following protocol:

Step 1 - Flags

Using C1 flags, evaluate temporal trend for past 3 days. Does C1 flag occur three consecutive days? Evaluate if current count is greater than any daily count in the output and verify if similar syndrome is flagged among other data providers. If yes to any of the above, proceed to step 2.

Step 2 – Secondary Analysis

Conduct secondary analysis focusing on spatial and demographic clustering. Evaluate based on zip code, school zone or other geographic level. Demographics include age group and gender. If clustering exists on either level, proceed to step 3.

Step 3 – Enhance Data Review

Contact data source and request follow-up information. Confirm current count of the event, determine an up-to-date count of the event under review and check for common exposures among case if case history information is available. If data review suggests a correlation of cases, contact Public Health Officer (PHO), who will decide whether to proceed to step 4.

Step 4 – Enhance Surveillance

PHO will alert nursing shift supervisors at local hospitals and request enhanced surveillance of the event. If other hospitals note influx of cases with similar signs/symptoms, members of PHIT will be notified to start epidemiologic investigation.

To date, there have been no occurrences of C1 flags for three consecutive days.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

D. School Absenteeism

The WTRO will review daily student absenteeism rates provided by the Department of Education to enhance surveillance for influenza activity evidenced by increasing absenteeism levels. This function is the responsibility of the Regional Epidemiologist. A mild pandemic may not result in mandatory school closure; however, if a severe pandemic virus is detected in the community using other surveillance methods, it is anticipated that schools will be closed using standard criteria established statewide by the Commissioner of Health.

E. Hospital Surveillance

Once the pandemic response plan is activated, daily electronic reports will be submitted from local hospitals to the WTRO that may include: emergency room data, confirmed disease, admissions and deaths. The hospital surveillance process will be supported by the Regional Hospital Coordinator and is described in detail in Section 4 of this plan.

F. Laboratory Surveillance

As directed by CEDS in Nashville, the WTRO will contact local laboratories to collect information related to ILI or a specific virus. The Regional CEDS Director is responsible for this function.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Section 3: Laboratory Diagnostics

I. Purpose

To confirm the diagnosis of human influenza caused by novel influenza viruses or a pandemic influenza virus.

II. Assumptions

Laboratory diagnostics is primarily a state function. The State Laboratory is responsible for communicating safety, testing protocols, and other laboratory information to clinical laboratories licensed in Tennessee. The role of the WTRO will be primarily related to the collection of samples.

III. Concept of Operations

A. Authorization for Testing

During a pre-pandemic phase, requests for novel influenza infection testing will be discussed with and approved by a State CEDS physician. During a pandemic, testing will be approved at the regional level with standard criteria for testing to be provided by CEDS.

B. Specimen Collection and Shipment

The Public Health Investigation Team (PHIT) may be called upon to assist with specimen collection. The Regional CEDS Director may also authorize specimen collection and shipment. The local nursing supervisor will supervise the collection and shipment of specimens by health departments. Unless otherwise directed by a CEDS physician, all influenza specimens will be sent to the State Laboratory in Nashville for testing. Informed consent is not required. The address is:

Laboratory Services: Attn: Virology
630 Hart Lane
Nashville, TN 37216
(615) 262-6300
(615) 262-6393 (fax)

C. Data Reporting and Tracking

CDC will conduct confirmatory testing of all specimens positive for novel influenza. Only confirmatory results will be considered valid and reported to the public in coordination with CEDS in Nashville. Regional CEDS staff will be responsible for entering patient data and other information requested into the OMS system or other database used to log and track laboratory information from the State lab. Regional CEDS staff will also be responsible for communicating laboratory results to patient care providers in the event that notification is needed more swiftly than letters sent through the postal service. Results will be communicated by fax. A list of providers is included in each county annex to this plan.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Section 4: Healthcare Planning

I. Purpose

To provide a framework for applying federal, state, regional and local resources to deliver hospital based care during an influenza pandemic.

II. Situation and Assumptions

A severe influenza pandemic is expected to significantly increase the demand for healthcare services at a time when the availability of healthcare workers will be reduced due to illness. In a severe pandemic, the imbalance between supply and demand is likely to overwhelm current health care system capacity and necessitate implementation of alternate strategies to manage the demand on healthcare resources.

- A. During a pandemic, infected persons will begin to present to healthcare provider offices, clinics, and emergency departments increasing the potential for infecting other patients and health care providers.
- B. There may be critical shortages of healthcare resources such as staffed hospital beds, mechanical ventilators, medications, morgue capacity, and other resources.

III. Concept of Operations

- A. Regional Hospital Coordinators (RHCs) have been delegated the authority to participate in the command, control, and coordination of the regional hospital response during mass causality incidents. The RHC is the liaison between hospitals and the WTRO. The Regional Hospital Coordinator will support the Regional Epidemiologist in the hospital surveillance process by collecting applicable hospital data via the Hospital Resource Tracking System (HRTS).
- B. HRTS is an Internet based, triple redundant, and secure system that provides data such as bed capacity, medical equipment levels, pharmaceutical levels, medical supply levels, and personal protective equipment levels of hospitals statewide. Hospitals update their status at predetermined intervals, which increase in frequency during emergency situations. RHCs are primary users of the HRTS system and have access to this information for planning and response purposes.
- C. The RHC maintains updated contact information for the key staff at each hospital in the west region. The contact database includes administration offices, emergency departments, hospital pharmacies, hospital laboratories, and medical materials management departments. This information is maintained in the Regional Hospital Coordination Plan which is an annex to the Regional Emergency Operations Plan.
- D. The RHC is responsible for locating and arranging for the sharing of medical resources between hospitals in the west region, and other regions of the state. The RHC will analyze the existing regional situation and make recommendations to the State Health Operations Center for the deployment of state medical assets such as the

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Strategic National Stockpile (SNS). With the assistance of the Tennessee Emergency Management Agency, the RHC will arrange for the transportation of medical supplies, equipment, and personnel from regional, state, and federal agencies as requested.

- E. The WTRO will refer requests for home healthcare services to local home healthcare providers. A list of providers with contact information is included in the Non-transportable Patient SOP which is an appendix to the Mass Clinic Annex to the EOP..
- F. There will be immediate and continuous demand from the public, community leaders, and the media for information on the potential and actual impact, magnitude, transmission, treatment, and recovery resulting from the pandemic. All information dissemination, whether to health care professionals, the public, the media, government leaders, should be coordinated through the Tennessee Department of Health during pandemic operations so all elements of the healthcare response operate as a single entity. As the liaison between hospitals and the TDH, the RHC will be the primary channel of all communication, messages, and alerts between the TDH and hospitals.
- G. The primary mode of communication during a pandemic will be e-mail, telephone, fax machines, and the Tennessee Health Alert Network (T-HAN). T-HAN is a crisis preparedness and response solution for mass communications during an emergency. Communications with hospitals can also be accomplished through redundant communication systems according to established procedures in the event landlines, fax machines, cellular phones, and paging systems are inoperable. The RHC is authorized and trained to use 800 MHz radio, satellite telephone, and satellite intranet.
- H. There are six federally qualified community health centers (CHCs) in the west region. Each of these facilities will serve as a source of primary care for patients who are ill but do not require hospitalization. The centers will provide care to patients regardless of ability to pay and will also offer telephone triage. The contact information for each CHC is included in the appropriate county annex to this plan.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Section 5 - Vaccine Distribution and Use

I. Purpose

To administer vaccine against pandemic influenza in order to make the best use of scarce resources in light of medical, societal and ethical considerations in order to minimize disease morbidity and mortality. Vaccine must be administered efficiently and monitored appropriately, in accordance with federal guidance.

II. Situation and Assumptions

- A. According to the Federal Pandemic Response Implementation Plan issued on May 3, 2006, final prioritization rankings of occupational and medical risk groups for vaccination will not be issued by the federal government until the virus has begun to cause a pandemic and the need to vaccinate is imminent. The decision will be based upon the epidemiology and severity of the pandemic, as well as the availability of vaccine.
- B. Vaccine will arrive in relatively small, frequent shipments over many months. The regional vaccination sites for rural West Tennessee will be the regional offices located at 295 Summar Drive in Jackson and 1010 Mt. Zion Road in Union City. All vaccinations will be provided by appointment and tracked through PTBMIS and any other federal database as required by CDC. Vaccination teams consisting of two registered nurses and a nursing assistant from the county health departments will be assigned to staff the vaccination clinics on a rotating basis. No additional training will be required and any additional supplies that are needed will be ordered through the Regional Pharmacist. The Tennessee Highway Patrol will provide security for vaccine transportation. Security for vaccination clinics will be provided by local law enforcement.
- C. The vaccine will be stored at the regional pharmacy at the WTRO and the Obion County Health Department.. All normal vaccine storage standards and cold chain requirements (refrigerated vaccine 35°F-46°F) will be met. Vaccine will be stored in a monitored refrigerator equipped with a saphone. In addition, vaccine will be secured against theft. Building security may be augmented if necessary. The Regional Pharmacist is responsible for vaccine storage and distribution.

III. Concept of Operations

- A. Data entry into the Patient Tracking Billing Management Information System (PTBMIS) and a federally approved vaccine administration database will be required to track vaccine administration. CDC's Vaccine Adverse Event Reporting System [VAERS]) will be used to track adverse effects. The Regional CEDS Director is responsible for this activity. The WTRO will have access to information systems to support tracking and allocation of vaccine distribution, use and monitoring through the state and will use them as required.
- B. For tier one recipients, vaccine administration points of contact at each hospital or outpatient facility are responsible for communicating to qualified personnel within

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

their institution details of where and when to obtain vaccine. These individuals are also responsible for providing lists of persons meeting the criteria for vaccination in each sub-group of tier one at their facility. Contact information for pandemic flu coordinators at each hospital is included as Appendix D. The WTRO also maintains current contact information for all other health care providers in the region including physicians, emergency medical service providers, nursing homes, home health agencies, and pharmacies. These subgroups will be contacted by WTRO Emergency Volunteer Coordinators to schedule administration of vaccine based on federal and state guidance. The following represents an estimate of the number of persons in each subgroup of Tier 1:

<u>Tier Sub-Groups</u>	<u>Estimated #</u>
Direct care providers in hospitals and 10% of non-patient critical staff	1,425
Direct patient care staff in outpatient settings	950
EMS personnel and patient care providers in residential facilities	760
Certified first responders and EMTs	95
Other critical non-patient care workers in hospitals	475
Other critical non-patient care workers in outpatient facilities	475
Pandemic influenza vaccinators	190
Patient care providers in inpatient facilities	150
Providers of essential services to non-pandemic patients	<u>285</u>
Total	4,805

- C. Second tier patients (the medically-high risk, as listed in the state plan) may be identified by documentation of qualifying high risk conditions (e.g., possession of prescriptions, medical records). Vaccination appointments will be made only for vaccine as it becomes available. Vaccinations will be provided on a first call, first served basis using the existing appointment system. Patients who are medically high risk as defined by state and federal criteria will be given priority for vaccination. Specific recommendations will be made during the pandemic, as those medically at highest risk are designated.
- D. Third tier and higher-level patients (medically at risk to lowest medical risk) may be identified by documentation of qualifying risk conditions (e.g., medical records, verification of identity as government leader or public health emergency response worker).
- E. Vaccine recipients will require identification each time they present for a dose. Recipients requiring vaccination because of their occupation will require a form of identification from their employer and will need to be identified by name to the health department by their employer. For example, hospitals will provide lists of names of personnel, in priority order, for immunization to the health department. Children with appointments may be confirmed with a parents' identification.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

- F. After the first dose, the recipient will receive an immunization card from the health department noting the date of their first dose and the due date for the second dose. Recipients also should present their immunization card at the time of the second dose.
- G. Recipients are responsible for communicating their immunization status to their employer (e.g., by providing a copy of their pandemic influenza immunization card).
- H. Appointments will be used to control crowding. Security will be provided by local law enforcement.
- I. Persons due for a second dose of vaccine take priority over persons not yet vaccinated. Vaccine is only protective 2 weeks after the second dose.
- J. If a regular supply of vaccine, delivered at least once monthly, is assured, vaccine will not be held in reserve for second doses. Second doses should be taken from subsequent shipments.
- L. Opening vaccination up to lower priority groups will be decided at the state level and implemented at the same time statewide. If a region's needs are saturated earlier than others, vaccine will be directed to other regions of the state to assure the quickest possible vaccination of the entire priority group statewide. The WTRO will use television, radio and print media to communicate with the public regarding vaccine availability and direct patients to the appropriate vaccination site. This activity is the responsibility of the Regional PIO.
- M. If the vaccine is given as part of an Investigational New Drug protocol, where additional documentation and informed consent forms may be required, some regional office services may be temporarily suspended in order to provide staff support for vaccination clinics.
- N. The Regional PIO will communicate with vulnerable populations such as those with disabilities or language barriers using local media including television, radio and newspapers. All vaccination sites are wheel chair accessible and have access to translations services.

Section 6 - Antiviral Drug Distribution and Use

I. Purpose

To optimize the use of the antiviral medications under regional control to minimize morbidity and mortality from pandemic influenza. To prevent hoarding, theft and misuse of antiviral medications.

II. Situation and Assumptions

Antiviral drugs will be distributed to acute care hospitals for administration to patients ill enough to require hospitalization. The regional Strategic National Stockpile (SNS) plan will be activated for storage and distribution of antivirals. The Regional Hospital Coordinator will be responsible for working with hospitals to assure they receive adequate supplies and to monitor the appropriate use of supplies. With currently available antiviral resources, it is not expected that any antivirals will be prescribed to outpatients in private outpatient facilities or health departments.

III. Concept of Operations

- A. Antiviral medications will be stored as described in the State Pandemic Influenza Response Plan.
- B. Security for the antivirals is a hospital responsibility once the drugs are positioned there, otherwise, security is an SNS function.
- C. Tracking of antiviral medications will be done through the hospital surveillance systems (either the hospital resource tracking system (HRTS) or an alternative database).
- D. Adverse event monitoring will be conducted by the Regional CEDS Director using the FDA's MedWatch or other reporting system as required by the federal government at the time.
- E. There may be additional requirements if an antiviral is given as an investigational drug (written consent, additional data collection from patients, etc.). The WTRO will follow all state and federal procedures for investigational drugs.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Section 7 - Community Interventions

I. Purpose

To lower the peak numbers of cases during a pandemic wave by preventing opportunities for widespread viral transmission in crowded group settings.

II. Situation and Assumptions

In the absence of an effective vaccine, the most effective means of slowing the spread of a pandemic influenza virus are strategies known collectively as “social distancing”. Social distancing involves a range of policies designed to prevent opportunities for the virus to spread in crowded settings.

III. Concept of Operations

A. Legal Authority and Regional Procedures

1. The TDH’s authority to quarantine is described in T.C.A. Title 68, Chapter 1, Part 2. The County Health Officer’s authority is described in T.C.A. 68-2-609. Isolation and quarantine, as well as the procedural mechanisms for enforcement, are defined in Tennessee Comprehensive Rules and Regulations, 1200-14-4-04. The legal authority of the TDH is also described in detail in Section 7 of the State Pandemic Influenza Response Plan.
2. The WTRO will use the least restrictive alternative that will adequately protect the public health and prevent the spread of disease. Regional procedures for implementing or enforcing isolation and/or quarantine are included as Appendix A.
3. During a pandemic, case management will cease and aggregate case reporting using clinical diagnosis is likely to become the reporting method of choice, while the region focuses on social distancing measures.

B. Support Services for Isolation and Quarantine

1. The Southwest and Northwest Community Services Agencies are responsible for oversight of food and essential service delivery to the home isolated or quarantined population, including housing, communications, food and other essential services for patients who have been placed in isolation and/or quarantine.
2. Individual county emergency operations centers (EOCs) in the WTR will be activated as necessary to assist with support services to the home isolated or quarantined population, including housing, communications, food and other essential services.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

C. Plan for Investigation and Response to a Novel Influenza Strain

1. Data Management and Communications

- a. **Data-** The WTRO will use the Outbreak Management System (or similar database) to manage data related to an influenza outbreak. This function is the responsibility of the Regional CEDS Director.
- b. **Internal Communications -** Key staff including members of the Public Health Investigation Team (PHIT) have been assigned communications devices and provided instructions in their use. Maintenance of communications devices and systems is the responsibility of the Regional Systems Administrator.
- c. **External Communications –** All external communications with the public, health care providers and the media will be coordinated with the State Health Department as described in the regional Emergency Response Communications Plan.

2. Response to Local Cases

- a. Suspected local cases will be investigated using normal operational procedures for outbreak investigations. In a pre-pandemic situation, this activity would likely involve state and federal public health authorities. Appendix B lists the steps in this process.
- b. Local cases that are suspected of being the result of exposure to an infected animal will be investigated in coordination with the Tennessee Department of Agriculture. The State Veterinarian for the Department of Agriculture can be reached at 615-837-5120. The Disaster Animal Response Coordinator can be reached at 865-207-4152.

D. Regional Containment (Social Distancing) Measures

1. The WTRO will utilize graded implementation of social distancing measures in coordination with State and local partners. Appendix C provides a template for possible implementation.
2. There are two key strategies for preventing transmission, each with varying degrees of efficacy. The first involves decreasing the probability that contact will result in infection, and may include activities such as providing education to the public about practicing cough etiquette and proper hand and respiratory hygiene. The second involves decreasing contact between infected and uninfected individuals, and may include activities such as isolating suspected cases and quarantining case contacts, issuing travel advisories and canceling schools and large gatherings.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

- a. Pandemic Alert Period
 1. Based on federal and state guidance, the WTRO will recommend isolation and laboratory testing of persons who are recent travelers to affected regions if they have ILI. If influenza is suspected or confirmed, the WTRO may recommend isolation at home or in a hospital until isolate sub-typing is accomplished. Isolation will take place until the person is afebrile for 24 hours. Viral shedding will not be monitored.
 2. Based on federal and state guidance, the WTRO may recommend isolation at home for contacts of cases. Patients without appropriate home environments will be referred to area hospitals.
 3. The WTRO will increase education about the importance of hand hygiene; cough etiquette and annual influenza vaccination. This activity is the responsibility to the regional PIO and will be accomplished through the release of information to media outlets including television, radio and local newspapers.

Possible containment measures if cases are first detected in the U.S. outside West Tennessee

1. During a severe pandemic, the WTRO will recommend that persons who are positive for influenza A be placed in isolation at home or in a hospital until isolate sub-typing can be accomplished. Isolation should continue until the patient is afebrile for at least 24 hours or until the isolate is laboratory confirmed not to be the novel virus.
2. The WTRO will recommend quarantine for contacts of cases
3. The WTRO will increase public education regarding the importance of hand hygiene and cough etiquette. This activity is the responsibility to the regional PIO and will be accomplished through the release of information to media outlets including television, radio and local newspapers.

Possible containment measures when cases are first detected in West Tennessee

1. The WTRO will recommend that persons who have ILI be placed in isolation at home or in a hospital until subtyping of their isolate can be accomplished. Isolation should continue until the patient

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

has been afebrile for at least 24 hours or until the isolate is laboratory confirmed not to be the novel virus.

2. The WTRO will recommend quarantine for contacts of cases.
3. If an animal source is identified and there is ongoing transmission within the animal population, WTRO will recommend that persons who may be in contact with potentially infected animals wear appropriate personal protective equipment as defined by CDC.
4. The WTRO will recommend cancellation of large gatherings depending on the level of person-to-person transmission. Based on the epidemiology of the known infected cases, WTRO may consider closure of schools, including colleges and universities, and closure of office buildings. Any suspension of large public gatherings will be based on State criteria and will follow these procedures:
 - a. The county mayors will be contacted directly by the local Public Health Directors to advise them of the closure recommendations;
 - b. The local school directors will be contacted directly by the local Public Health Directors to advise them of the closure recommendations;
 - c. Major employers in each county will be contacted directly by local Health Educators to advise them of the closure recommendations; and,
 - d. The Regional PIO will contact all media outlets to provide information to the public regarding closure recommendations.
5. The WTRO will increase public education regarding the importance of hand hygiene and cough etiquette. . This activity is the responsibility of the regional PIO and will be accomplished through the release of information to media outlets including television, radio and local newspapers.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

b. Local Pandemic Waves

1. The WTRO will recommend that all persons who are ill and their contacts remain in isolation at home.
2. The Commissioner, or his/her designee, upon consultation with the Governor, will declare the suspension of discretionary public gatherings (>100 persons) to be implemented on a county-by-county basis, when advised by the State Epidemiologist that triggering criteria have been met.. It is expected that all very large gatherings (>10,000 persons) will be suspended.
3. School closure issues will be addressed at the state level. Contact information for each LEA in the region is included in each county annex to this plan. The appropriate county Public Health Director is responsible for contacting the LEA in their counties to communicate the closure orders issued by the Commissioner. Enforcement of closure orders is the responsibility of local law enforcement. The Regional PIO will communicate with the public using media outlets to provide information regarding closure orders..

c. Post-Pandemic Period

The WTRO will assess the compliance with community level control measures and evaluate the efficacy of community level control measures. The decision to lift social distancing measures will be based on epidemiological evidence and will be made in coordination with State officials. Information regarding the lifting of distancing measures will be communicated in the same manner as the recommendation to implement such measures. See Section 4.

d. Roles of Local Partners

1. The roles of regional partners are described in Core Plan, page 3.
2. Contact information for local partners is included in each county annex.

E. Regional Mortuary Services:

Contact information for local funeral directors is included in each county annex. If the pandemic results in fatalities that are beyond the capacity of local hospitals and mortuary services, TEMA will be asked to provide refrigerated trucks to serve as temporary morgues.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Section 8 - Public Health Communications

I. Purpose

To describe plans, methods and persons responsible for communications with the state health department, emergency management officials, hospitals, outpatient care facilities, businesses, schools and the general public.

II. Situation and Assumptions

Communicating information to the public about pandemic influenza will be carried out according to policies and procedures described in the WTRO *Emergency Response Communications Plan*. This document details the means, organization and process by which the WTRO will provide information and instructions to the public before, during and after a public health threat or emergency such as pandemic influenza. All messages will be coordinated with State officials to ensure consistency.

III. Concept of Operations

A. Message Development

The WTRO will develop messages to ensure that the public receives timely and accurate information about the following during a pandemic event:

- Basic information about influenza, high-risk populations and recommended preventive practices;
- The epidemiology of the pandemic;
- The symptoms that should prompt seeking medical assistance;
- The availability of vaccines and antivirals and the rationale for providing medication to priority groups during vaccine and antiviral shortages;
- Instructions for receiving vaccine and antivirals at vaccination sites;
- Directives for community level containment activities; and,
- Explanations of concepts such as isolation and quarantine

B. Responsibility and Methods of Communication

1. The chief medical spokesperson, or Medical Public Information Officer for the region, is the Regional Health Officer. The backup Medical PIO is a physician designated by the Regional Health Officer. All medical messages will be delivered or approved by the Medical PIO. The Medical PIO is responsible for communicating with the State Health Officer and State Epidemiologist during a pandemic and coordinating the delivery of information to the public and health care providers.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

2. The Medical PIO may be asked to participate in a press conference or Joint Information Center (JIC), if activated. Depending on the nature of the event, the State Epidemiologist or State Health Officer may participate in local media sessions.
3. The Emergency Preparedness PIO is the Regional Emergency Response Coordinator (ERC). The Emergency Preparedness PIO is responsible for coordinating the delivery of messages and information related to Public Health response plans and activities. The Emergency Response Coordinator is also responsible for communications with emergency management officials, businesses and schools.
4. The Regional Hospital Coordinator (RHC) is responsible for communications with area hospitals as described in Section 4 of this plan.
5. Methods of communication will include cell phones, satellite phones, Internet, fax and hand-delivered messages. The Regional Systems Administrator is responsible for maintaining and testing communications devices.
6. Public Health Office Assistants in each county health department will use the resource information attached in the appropriate county annex to refer patients who request information related to social support services.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Section 9 - Workforce and Social Support

I. Purpose

To provide information and contact numbers for local volunteer groups or agencies willing to assist in meeting the physical, financial, emotional and spiritual needs of individuals affected by a pandemic as responders or victims.

II. Situation and Assumptions

- A. The response to an influenza pandemic will pose substantial physical, personal, social and emotional challenges to health care workers and the general public. Demands for support services will increase.
- B. Enhanced workforce support will be necessary to ensure that public health staff have basic mental health needs met, including systems to assure adequate time to take care of personal needs and sleep to help prevent burnout.

III. Concept of Operations - Workforce Support

- A. Rest and recuperation areas will be identified at each facility. The local Public Health Director is responsible for ensuring that these areas are stocked with healthy snacks, telephones and pamphlets/information regarding available resources. Staff will be instructed by supervisors to take regular rest breaks.
- B. The Employee Assistance Program will be enlisted to provide employees and their families with psycho-support services. Supervisors will be instructed to closely monitor all employees in order to identify emotional and psychosocial support needs. Supervisors will provide employees with detailed information regarding the types of services available through the EAP program.
- C. Throughout the response, policies on staff health and safety will be reviewed and revised as necessary by the Public Health Director.

IV. Regional Resources

Major Multi-Disciplinary Organizations:

A. Volunteer/ Non-government:

- 1. United Way:
 - a. Provides referrals to local social service agencies..
 - b. United Way of West TN
1341 N. Highland Ave.
Jackson, TN 38301
731-422-1816
www.Unitedway.tn.org

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

B. Government / quasi-state:

1. TN Emergency Management Agency (TEMA):
 - a. Provides assistance to individuals and households through coordinated relief programs from federal (U.S. Departments of Homeland Security, Small Business Administration, Farm Service Agency, and the Internal Revenue Service) and State (Tennessee Departments of Human Services, Labor & Workforce Development, Mental Health and Developmental Disabilities) agencies. TEMA helps mobilize major volunteer groups, such as ARC and VOAD. TEMA also helps support government operations and staff.
 - b. TEMA
1510 Hwy 70 Bypass
Jackson, TN 38301
731-421-5018
www.tnema.org/index.htm
2. TN Department of Human Services:
 - a. Administers the majority of basic support services, including child care and food programs.
 - b. The DHS has 130 office locations, and is one of the few state agencies with offices in all 95 counties. DHS Family Assistance Service Center 1-866-311-4287 www.state.tn.us/humanserv/st_map.htm
3. Delta Human Resources Agency
 - a. Serves the economically disadvantaged, elderly and handicapped. Services include rural public transportation, assistance with rent, utilities (heating and cooling), child care and commodities. Serves Lauderdale and Tipton Counties.
 - b.

Delta Human Resource Agency	Delta Human Resources Agency

Covington, TN 38019	Ripley, TN 38063
(901) 476-5226	731-635-1931
4. Southwest Human Resource Agency
 - a. Serves the economically disadvantaged, elderly and handicapped. Services include rural public transportation, assistance with rent, utilities (heating and cooling), child care and commodities. Serves Chester, Decatur, Fayette, Hardeman, Hardin, Haywood, Henderson, and McNairy Counties.
 - b. Southwest Human Resource Agency
1527 White Ave
Henderson, TN 38340
(731) 989-5111

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

5. Northwest Human Resource Agency
 - a. Serves the economically disadvantaged, elderly and handicapped. Services include rural public transportation, assistance with rent, utilities (heating and cooling), child care and commodities. Serves Benton, Carroll, Crockett, Dyer, Gibson, Henry, Lake, Obion, and Weakley Counties.
 - b. Northwest Human Resource Agency
124 Weldon Drive
Martin, TN 38237
800-750-6866
6. Southwest Community Services Agency
 - a. Responsible for the provision of services to isolated or quarantined patients including shelter, food, medicines and communications. Provides services to the following counties: Chester, Decatur, Hardin, Hardeman, Haywood, Henderson, Fayette, Lauderdale, McNairy and Tipton.
 - b. SWCSA
6 Stonebridge Blvd., Suite G
Jackson, TN 38305
731-984-9030
731-664-4623 (fax)
7. Northwest Community Services Agency
 - a. Responsible for the provision of services to isolated or quarantined patients including shelter, food, medicines and communications. Provides services to the following counties: Benton, Carroll, Crockett, Dyer, Gibson, Henry, Lake, Obion and Weakley.
 - b. NWCSA
1604 Reelfoot Ave.
Union City, TN 38261
731-884-2640
731-884-2644 (fax)

V. Social Support (Mental Health):

1. Pathways of Tennessee
 - a. Community mental health outpatient counseling, intensive outpatient and inpatient mental health and substance abuse treatment. Serves Crockett, Dyer, Gibson, Hardeman, Haywood, Henderson, Lake, Madison, Obion and Weakley counties.
 - b. Pathways of Tennessee
238 Summar Drive

731-935-8200
800-372-0693
www.wth.org/body.cfm?id=457

2. Behavioral Health Initiatives
 - a. Provides mental health support services including family service counseling, crisis dispatch services, housing for adults with mental illness. Serves Benton, Carroll, Chester, Crockett, Dyer, Fayette, Gibson, Hardeman, Hardin, Haywood, Henderson, Henry, Lake, Lauderdale, Madison, McNairy and Tipton Counties.
 - b. Behavioral Health Initiatives
36C Sandstone Circle
Jackson, TN 38305
731-668-6886
800-353-9918
3. Carey Counseling Center
 - a. Five outpatient mental health facilities serving Henry, Gibson, Carroll, Obion, Lake, Weakley and Benton Counties.
 - b. 800-611-7757
731-642-0521
4. Western Mental Health Institute
 - a. Inpatient mental health treatment.
 - b. Western Mental Health Institute
11100 Old Hwy 64
Bolivar, TN 38008
731-228-2000
5. Quinco Mental Health Centers
 - a. Provides mental health and counseling services including individual, family and group counseling, testing, evaluation, referral services, day treatment services, alcohol and drug services and victims support services. Also, operate group homes.
 - b. Quinco Mental Health Center
10710 Old Bolivar Hwy 64 West
Bolivar, TN 38008
731-658-6113
800-532-6339
6. Professional Counseling Services, Inc.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

- a. Clinic serving patients in Tipton, Fayette and Lauderdale counties is located adjacent to Baptist Memorial Hospital-Tipton. Satellite clinics are located in Fayette, Lauderdale, Dyer, Haywood and Shelby counties. The facility is staffed with psychiatrists, psychologist, social workers, pharmacist, guidance counselors, registered nurse and a full-time director. Day hospitalization and twenty-four hour emergency service is provided. Specialized programs such as alcohol and drug education and children and youth services are also provided.
- b. Professional Counseling Services, Inc.
1997 Hwy 51 South
Covington, TN 38019
(901) 476-8967

VI. Religious Organizations

1. Regional Inter-Faith Association
 - a. Services include food pantry, food bank, soup kitchen, emergency financial assistance and support services for the elderly and disabled. Serves 17 counties in West Tennessee.
 - b. RIFA
225 N. Highland Ave.
Jackson, TN 38301
731-427-7963

VII. Financial and Economic Issues:

In the absence of a declared state of emergency, the ability of the state or Federal government to provide financial compensation to affected individuals or to relax late payment penalties for utilities or other essential services is not known at this time. For that reason, persons in need of economic assistance will have to turn to local volunteer relief organizations. Additional county-level resources are identified in each county annex to this plan.

VIII. Child and Elder Care:

In some cases, housing and care will be required for several days or weeks for the children or elderly dependents of ill individuals where family or friends are not available to care for them. Placement can be difficult if the dependents are exposed and must be monitored for signs of disease.

1. TN Department of Human Services:

There are approximately 5,600 child care providers in TN with a total capacity of 340,000. Most are child care centers; home care and drop-in care are also available. This list can be found at: www.state.tn.us/humanserv/childcare/providers-map.htm

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

2. Child Care Resource & Referral Centers:
 - a. Provides parents and the community with referrals and resources for child care at the local level.
 - b. Northwest TN Council on Children and Youth
POB 505
Dresden, TN 38225
731-364-5000
 - c. Southwest TN Council on Children and Youth
225 Martin Luther King Drive
Jackson, TN 38301
731-423-6545
3. Exchange Club-Carl Perkins Center
 - a. Provides support to families related to the prevention of child abuse. Helps both children and their parent's meet practical needs.
 - b. Exchange Club-Carl Perkins Center
POB 447
Jackson, TN 38302
731-424-7900
731-424-4847 - fax

IX. Employment and School:

The risk of losing a job or falling behind or out of school is an important barrier to compliance with social distancing orders, such as staying home if sick. The Regional PIO will communicate with local businesses and schools using television, radio and print media to encourage compliance with recommended social distancing measures.

A. Health Directive

1. The purpose of a Public Health Directive is to direct a carrier, owner or operator of the premises to cooperate with health authorities' efforts to prevent or control transmission of a disease that poses a health threat to others.
2. A Health Directive can be issued if the Health Officer has a reasonable belief that is based on clinical or epidemiological evidence of the kind relied upon by medical experts.
3. The Directive may be a written or oral statement (if compelling circumstances exist followed by a written statement within 3 days) and must be "individual and specific", not issued to a class of persons.
4. The Directive should be written in non-technical language and must include reasons for the Directive (including actions taken prior to issuance of the Directive). It must also provide specific dates, expected treatment, anticipated duration and rights or appeal.
5. The Health Officer may order education, counseling, medical tests, exams, treatment, isolation and/or quarantine. The Directive may also restrict or deny access to premises upon which a source of disease may be found.
6. The Directive must include information to enable the subject of the order to avail him or herself of review and must include a copy of the Disease Control Threat Procedures Rules 1200-14-4. The subject may request review by the Chief Medical Officer.
7. If a subject refuses to comply, the Health Officer has grounds to proceed with petition in General Sessions Court for s Temporary Hold and/or Public Health Measure.

B. Temporary Hold and Public Health Measure

1. A Temporary Hold or Public Health Measure involves an order by the court placing a person in TDH custody and/or restrict access to premises.
2. There must be clear and convincing evidence of need.
3. The General Session Court in the county where a subject lives, or where the premises are found, is petitioned. Such a hearing may be held any time and any place in the county. All persons present at the hearing may need to wear protective masks.
4. The subject may appeal to the Circuit Court or file for writ of habeas corpus but the subject's status shall not change while an appeal is pending.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

5. A Temporary Hold should be used when there is imminent need to place a person in TDH custody because the subject is infectious and non-adherent to physician's orders, is a flight risk, or needs medical testing or treatment.
6. The Temporary Hold can result in the civil arrest and/or transport of a patient. A patient can be held for an initial period up to 5 working days which can be extended a maximum to two times for a maximum of 15 days.

C. Property Measures

1. The state or local health department can close a facility or impound contaminated property by issuing administrative public health orders.
2. In addition to public health powers, state and local law enforcement can require temporary closure of a facility as unsafe.

D. Essential Services

1. The Northwest and Southwest Community Services Agencies are responsible for oversight of the delivery of essential services to patients restricted by isolation or quarantine.

Standard Procedures for Outbreak Investigation

Appendix B

1. Director of CEDS notified
2. Regional Health Officer and Regional Director notified.
3. Gather patient specific information, e.g. history, travel, symptoms, contacts.
4. Notify CEDS in Nashville if novel virus suspected..
5. Mobilize staff, including the PHIT as necessary, to support investigation.
6. Outline preliminary recommendations for infection control and PPE.
7. Coordinate delivery of sample to regional or State Lab.
8. Monitor patient and contacts for symptoms.
9. Upon laboratory confirmation, recommend containment procedures.
10. Notify local hospitals, physicians and pharmacies as necessary.

Graded Implementation of Social Distancing Measures

Appendix C

Stage	Level of Influenza Activity In West Tennessee	Possible WTRO Response Activities (response measures will be implemented in coordination with State officials)
1	Domestic transmission of pandemic virus with a loss of epidemiological links among cases in confirmed in the U.S> by CDC	<ul style="list-style-type: none"> ○ Activate response plan ○ CEDS begins active daily monitoring of all available surveillance systems ○ Commissioner may suspend large public gatherings ○ Communicate control measures to local officials
2	Domestic transmission of pandemic virus with a loss of epidemiological links among cases is laboratory confirmed by CDC or State Lab	<ul style="list-style-type: none"> ○ Commissioner or designee will declare suspension of discretionary public gatherings on a county by county basis when triggering criteria are met ○ Implement social distancing measures under conditions defined by Commissioner
3	Pandemic wave ends in affected counties	<ul style="list-style-type: none"> ○ Commissioner or designee will declare when public gatherings may be resumed on a county-by-county basis when triggering criteria are met ○ Implement social distancing measures under conditions defined by Commissioner
4	Period between pandemic waves	Normal activities resume
5	Pandemic wave returns	<ul style="list-style-type: none"> ○ Resumption of restrictions based on the same criteria and procedures described above ○ Review and adjust recommendations for social distancing based on the virulence of the strain and evidence of best practices for protecting health

County Annexes

Benton County

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Benton County Annex TDH Influenza Pandemic Response Plan

Core Plan

The county-level response to an influenza pandemic will be coordinated with regional and state-level response activities. The roles and responsibilities of response partners are described in the regional plan.

Operational Sections:

Section 1: Continuity of Operations

See regional plan, Section 1.

Section 2: Disease Surveillance

Disease surveillance activities are conducted at the regional level. See Regional Plan, Section 2.

Section 3: Laboratory

See regional plan, Section 3. The Nursing Supervisor at the county health department will work with regional CEDS and Laboratory staff to facilitate viral testing of any person presenting with ILI that has epidemiological risk factors for novel influenza.

Section 4: Healthcare Planning

See Regional Plan, Section 4. Contact information for hospitals, physicians, pharmacies and mental health providers is attached to this annex. Contact and capacity information for nursing homes and home health agencies is included in the Non-Transportable Patient SOP which is part of the Mass Clinic Response Annex to the EOP. Additional information regarding hospital resources and capacity is available through the Hospital Resource Tracking System (HRTS). Hospital data in HRTS includes: staffed beds, available beds, available PPE, ventilators, respirators, negative pressure beds and any stockpiled drugs. The Regional Hospital Coordinator is responsible for accessing hospital data through HRTS.

Section 5: Vaccine Administration and Use

See regional plan, Section 5. Local staff may be asked to administer vaccine as it becomes available. All doses will be administered and tracked according to federal and State requirements. Vaccine will be administered at the regional office in Union City.

Section 6: Antivirals

See regional plan, Section 6. Local staff may be asked to administer antiviral medications in response to an outbreak. All doses will be administered and tracked according to federal and State requirements.

Section 7: Community Interventions

See regional plan, Section 7. Implementation of community interventions will be coordinated with local, regional and State officials. The Local Public Health Director will communicate recommended social distancing measures to the county mayor, sheriff and Director of Schools. Enforcement of social distancing measures will be the responsibility of local officials. Local staff may be asked to provide information to the public and local officials regarding recommended community interventions.

Section 8: Communication

See regional plan, Section 8. Public Health messages will be coordinated with State and regional officials. Local staff may be asked to contact local officials in order to coordinate community interventions or other containment measures. The local emergency operations center may be activated to facilitate communication with State/regional officials or coordinate communications activities.

Section 9: Workforce and Psychosocial Support

See regional plan, Section 9. Local resources for workforce and community psychosocial support services are listed in an appendix to this county annex. Local staff may be asked to share resource information with affected persons who need financial, spiritual, physical or medical assistance during a pandemic.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Carroll County Annex TDH Influenza Pandemic Response Plan

Core Plan

The county-level response to an influenza pandemic will be coordinated with regional and state-level response activities. The roles and responsibilities of response partners are described in the regional plan.

Operational Sections:

Section 1: Continuity of Operations

See regional plan, Section 1.

Section 2: Disease Surveillance

Disease surveillance activities are conducted at the regional level. See Regional Plan, Section 2.

Section 3: Laboratory

See regional plan, Section 3. The Nursing Supervisor at the county health department will work with regional CEDS and Laboratory staff to facilitate viral testing of any person presenting with ILI that has epidemiological risk factors for novel influenza.

Section 4: Healthcare Planning

See Regional Plan, Section 4. Contact information for hospitals, physicians, pharmacies and mental health providers is attached to this annex. Contact and capacity information for nursing homes and home health agencies is included in the Non-Transportable Patient SOP which is part of the Mass Clinic Response Annex to the EOP. Additional information regarding hospital resources and capacity is available through the Hospital Resource Tracking System (HRTS). Hospital data in HRTS includes: staffed beds, available beds, available PPE, ventilators, respirators, negative pressure beds and any stockpiled drugs. The Regional Hospital Coordinator is responsible for accessing hospital data through HRTS.

Section 5: Vaccine Administration and Use

See regional plan, Section 5. Local staff may be asked to administer vaccine as it becomes available. All doses will be administered and tracked according to federal and State requirements. Vaccine will be administered at the regional office in Union City.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Section 6: Antivirals

See regional plan, Section 6. Local staff may be asked to administer antiviral medications in response to an outbreak. All doses will be administered and tracked according to federal and State requirements.

Section 7: Community Interventions

See regional plan, Section 7. Implementation of community interventions will be coordinated with local, regional and State officials. The Local Public Health Director will communicate recommended social distancing measures to the county mayor, sheriff and Director of Schools. Enforcement of social distancing measures will be the responsibility of local officials. Local staff may be asked to provide information to the public and local officials regarding recommended community interventions.

Section 8: Communication

See regional plan, Section 8. Public Health messages will be coordinated with State and regional officials. Local staff may be asked to contact local officials in order to coordinate community interventions or other containment measures. The local emergency operations center may be activated to facilitate communication with State/regional officials or coordinate communications activities.

Section 9: Workforce and Psychosocial Support

See regional plan, Section 9. Local resources for workforce and community psychosocial support services are listed in an appendix to this county annex. Local staff may be asked to share resource information with affected persons who need financial, spiritual, physical or medical assistance during a pandemic.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Chester County Annex TDH Influenza Pandemic Response Plan

Core Plan

The county-level response to an influenza pandemic will be coordinated with regional and state-level response activities. The roles and responsibilities of response partners are described in the regional plan.

Operational Sections:

Section 1: Continuity of Operations

See regional plan, Section 1.

Section 2: Disease Surveillance

Disease surveillance activities are conducted at the regional level. See Regional Plan, Section 2.

Section 3: Laboratory

See regional plan, Section 3. The Nursing Supervisor at the county health department will work with regional CEDS and Laboratory staff to facilitate viral testing of any person presenting with ILI that has epidemiological risk factors for novel influenza.

Section 4: Healthcare Planning

See Regional Plan, Section 4. Contact information for hospitals, physicians, pharmacies and mental health providers is attached to this annex. Contact and capacity information for nursing homes and home health agencies is included in the Non-Transportable Patient SOP which is part of the Mass Clinic Response Annex to the EOP. Additional information regarding hospital resources and capacity is available through the Hospital Resource Tracking System (HRTS). Hospital data in HRTS includes: staffed beds, available beds, available PPE, ventilators, respirators, negative pressure beds and any stockpiled drugs. The Regional Hospital Coordinator is responsible for accessing hospital data through HRTS.

Section 5: Vaccine Administration and Use

See regional plan, Section 5. Local staff may be asked to administer vaccine as it becomes available. All doses will be administered and tracked according to federal and State requirements. Vaccine will be administered at the regional office in Jackson.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Section 6: Antivirals

See regional plan, Section 6. Local staff may be asked to administer antiviral medications in response to an outbreak. All doses will be administered and tracked according to federal and State requirements.

Section 7: Community Interventions

See regional plan, Section 7. Implementation of community interventions will be coordinated with local, regional and State officials. The Local Public Health Director will communicate recommended social distancing measures to the county mayor, sheriff and Director of Schools. Enforcement of social distancing measures will be the responsibility of local officials. Local staff may be asked to provide information to the public and local officials regarding recommended community interventions.

Section 8: Communication

See regional plan, Section 8. Public Health messages will be coordinated with State and regional officials. Local staff may be asked to contact local officials in order to coordinate community interventions or other containment measures. The local emergency operations center may be activated to facilitate communication with State/regional officials or coordinate communications activities.

Section 9: Workforce and Psychosocial Support

See regional plan, Section 9. Local resources for workforce and community psychosocial support services are listed in an appendix to this county annex. Local staff may be asked to share resource information with affected persons who need financial, spiritual, physical or medical assistance during a pandemic.

Decatur County

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Decatur County Annex TDH Influenza Pandemic Response Plan

Core Plan

The county-level response to an influenza pandemic will be coordinated with regional and state-level response activities. The roles and responsibilities of response partners are described in the regional plan.

Operational Sections:

Section 1: Continuity of Operations

See regional plan, Section 1.

Section 2: Disease Surveillance

Disease surveillance activities are conducted at the regional level. See Regional Plan, Section 2.

Section 3: Laboratory

See regional plan, Section 3. The Nursing Supervisor at the county health department will work with regional CEDS and Laboratory staff to facilitate viral testing of any person presenting with ILI that has epidemiological risk factors for novel influenza.

Section 4: Healthcare Planning

See Regional Plan, Section 4. Contact information for hospitals, physicians, pharmacies and mental health providers is attached to this annex. Contact and capacity information for nursing homes and home health agencies is included in the Non-Transportable Patient SOP which is part of the Mass Clinic Response Annex to the EOP. Additional information regarding hospital resources and capacity is available through the Hospital Resource Tracking System (HRTS). Hospital data in HRTS includes: staffed beds, available beds, available PPE, ventilators, respirators, negative pressure beds and any stockpiled drugs. The Regional Hospital Coordinator is responsible for accessing hospital data through HRTS.

Section 5: Vaccine Administration and Use

See regional plan, Section 5. Local staff may be asked to administer vaccine as it becomes available. All doses will be administered and tracked according to federal and State requirements. Vaccine will be administered at the regional office in Jackson.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Section 6: Antivirals

See regional plan, Section 6. Local staff may be asked to administer antiviral medications in response to an outbreak. All doses will be administered and tracked according to federal and State requirements.

Section 7: Community Interventions

See regional plan, Section 7. Implementation of community interventions will be coordinated with local, regional and State officials. The Local Public Health Director will communicate recommended social distancing measures to the county mayor, sheriff and Director of Schools. Enforcement of social distancing measures will be the responsibility of local officials. Local staff may be asked to provide information to the public and local officials regarding recommended community interventions.

Section 8: Communication

See regional plan, Section 8. Public Health messages will be coordinated with State and regional officials. Local staff may be asked to contact local officials in order to coordinate community interventions or other containment measures. The local emergency operations center may be activated to facilitate communication with State/regional officials or coordinate communications activities.

Section 9: Workforce and Psychosocial Support

See regional plan, Section 9. Local resources for workforce and community psychosocial support services are listed in an appendix to this county annex. Local staff may be asked to share resource information with affected persons who need financial, spiritual, physical or medical assistance during a pandemic.

Fayette County

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Fayette County Annex TDH Influenza Pandemic Response Plan

Core Plan

The county-level response to an influenza pandemic will be coordinated with regional and state-level response activities. The roles and responsibilities of response partners are described in the regional plan.

Operational Sections:

Section 1: Continuity of Operations

See regional plan, Section 1.

Section 2: Disease Surveillance

Disease surveillance activities are conducted at the regional level. See Regional Plan, Section 2.

Section 3: Laboratory

See regional plan, Section 3. The Nursing Supervisor at the county health department will work with regional CEDS and Laboratory staff to facilitate viral testing of any person presenting with ILI that has epidemiological risk factors for novel influenza.

Section 4: Healthcare Planning

See Regional Plan, Section 4. Contact information for hospitals, physicians, pharmacies and mental health providers is attached to this annex. Contact and capacity information for nursing homes and home health agencies is included in the Non-Transportable Patient SOP which is part of the Mass Clinic Response Annex to the EOP. Additional information regarding hospital resources and capacity is available through the Hospital Resource Tracking System (HRTS). Hospital data in HRTS includes: staffed beds, available beds, available PPE, ventilators, respirators, negative pressure beds and any stockpiled drugs. The Regional Hospital Coordinator is responsible for accessing hospital data through HRTS.

Section 5: Vaccine Administration and Use

See regional plan, Section 5. Local staff may be asked to administer vaccine as it becomes available. All doses will be administered and tracked according to federal and State requirements. Vaccine will be administered at the regional office in Jackson.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Section 6: Antivirals

See regional plan, Section 6. Local staff may be asked to administer antiviral medications in response to an outbreak. All doses will be administered and tracked according to federal and State requirements.

Section 7: Community Interventions

See regional plan, Section 7. Implementation of community interventions will be coordinated with local, regional and State officials. The Local Public Health Director will communicate recommended social distancing measures to the county mayor, sheriff and Director of Schools. Enforcement of social distancing measures will be the responsibility of local officials. Local staff may be asked to provide information to the public and local officials regarding recommended community interventions.

Section 8: Communication

See regional plan, Section 8. Public Health messages will be coordinated with State and regional officials. Local staff may be asked to contact local officials in order to coordinate community interventions or other containment measures. The local emergency operations center may be activated to facilitate communication with State/regional officials or coordinate communications activities.

Section 9: Workforce and Psychosocial Support

See regional plan, Section 9. Local resources for workforce and community psychosocial support services are listed in an appendix to this county annex. Local staff may be asked to share resource information with affected persons who need financial, spiritual, physical or medical assistance during a pandemic.

Gibson County

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Gibson County Annex TDH Influenza Pandemic Response Plan

Core Plan

The county-level response to an influenza pandemic will be coordinated with regional and state-level response activities. The roles and responsibilities of response partners are described in the regional plan.

Operational Sections:

Section 1: Continuity of Operations

See regional plan, Section 1.

Section 2: Disease Surveillance

Disease surveillance activities are conducted at the regional level. See Regional Plan, Section 2.

Section 3: Laboratory

See regional plan, Section 3. The Nursing Supervisor at the county health department will work with regional CEDS and Laboratory staff to facilitate viral testing of any person presenting with ILI that has epidemiological risk factors for novel influenza.

Section 4: Healthcare Planning

See Regional Plan, Section 4. Contact information for hospitals, physicians, pharmacies and mental health providers is attached to this annex. Contact and capacity information for nursing homes and home health agencies is included in the Non-Transportable Patient SOP which is part of the Mass Clinic Response Annex to the EOP. Additional information regarding hospital resources and capacity is available through the Hospital Resource Tracking System (HRTS). Hospital data in HRTS includes: staffed beds, available beds, available PPE, ventilators, respirators, negative pressure beds and any stockpiled drugs. The Regional Hospital Coordinator is responsible for accessing hospital data through HRTS.

Section 5: Vaccine Administration and Use

See regional plan, Section 5. Local staff may be asked to administer vaccine as it becomes available. All doses will be administered and tracked according to federal and State requirements. Vaccine will be administered at regional office in Jackson.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Section 6: Antivirals

See regional plan, Section 6. Local staff may be asked to administer antiviral medications in response to an outbreak. All doses will be administered and tracked according to federal and State requirements.

Section 7: Community Interventions

See regional plan, Section 7. Implementation of community interventions will be coordinated with local, regional and State officials. The Local Public Health Director will communicate recommended social distancing measures to the county mayor, sheriff and Director of Schools. Enforcement of social distancing measures will be the responsibility of local officials. Local staff may be asked to provide information to the public and local officials regarding recommended community interventions.

Section 8: Communication

See regional plan, Section 8. Public Health messages will be coordinated with State and regional officials. Local staff may be asked to contact local officials in order to coordinate community interventions or other containment measures. The local emergency operations center may be activated to facilitate communication with State/regional officials or coordinate communications activities.

Section 9: Workforce and Psychosocial Support

See regional plan, Section 9. Local resources for workforce and community psychosocial support services are listed in an appendix to this county annex. Local staff may be asked to share resource information with affected persons who need financial, spiritual, physical or medical assistance during a pandemic.

Haywood County

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Haywood County Annex TDH Influenza Pandemic Response Plan

Core Plan

The county-level response to an influenza pandemic will be coordinated with regional and state-level response activities. The roles and responsibilities of response partners are described in the regional plan.

Operational Sections:

Section 1: Continuity of Operations

See regional plan, Section 1.

Section 2: Disease Surveillance

Disease surveillance activities are conducted at the regional level. See Regional Plan, Section 2.

Section 3: Laboratory

See regional plan, Section 3. The Nursing Supervisor at the county health department will work with regional CEDS and Laboratory staff to facilitate viral testing of any person presenting with ILI that has epidemiological risk factors for novel influenza.

Section 4: Healthcare Planning

See Regional Plan, Section 4. Contact information for hospitals, physicians, pharmacies and mental health providers is attached to this annex. Contact and capacity information for nursing homes and home health agencies is included in the Non-Transportable Patient SOP which is part of the Mass Clinic Response Annex to the EOP. Additional information regarding hospital resources and capacity is available through the Hospital Resource Tracking System (HRTS). Hospital data in HRTS includes: staffed beds, available beds, available PPE, ventilators, respirators, negative pressure beds and any stockpiled drugs. The Regional Hospital Coordinator is responsible for accessing hospital data through HRTS.

Section 5: Vaccine Administration and Use

See regional plan, Section 5. Local staff may be asked to administer vaccine as it becomes available. All doses will be administered and tracked according to federal and State requirements. Vaccine will be administered at the regional office in Jackson.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Section 6: Antivirals

See regional plan, Section 6. Local staff may be asked to administer antiviral medications in response to an outbreak. All doses will be administered and tracked according to federal and State requirements.

Section 7: Community Interventions

See regional plan, Section 7. Implementation of community interventions will be coordinated with local, regional and State officials. The Local Public Health Director will communicate recommended social distancing measures to the county mayor, sheriff and Director of Schools. Enforcement of social distancing measures will be the responsibility of local officials. Local staff may be asked to provide information to the public and local officials regarding recommended community interventions.

Section 8: Communication

See regional plan, Section 8. Public Health messages will be coordinated with State and regional officials. Local staff may be asked to contact local officials in order to coordinate community interventions or other containment measures. The local emergency operations center may be activated to facilitate communication with State/regional officials or coordinate communications activities.

Section 9: Workforce and Psychosocial Support

See regional plan, Section 9. Local resources for workforce and community psychosocial support services are listed in an appendix to this county annex. Local staff may be asked to share resource information with affected persons who need financial, spiritual, physical or medical assistance during a pandemic.

Lake County

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Lake County Annex TDH Influenza Pandemic Response Plan

Core Plan

The county-level response to an influenza pandemic will be coordinated with regional and state-level response activities. The roles and responsibilities of response partners are described in the regional plan.

Operational Sections:

Section 1: Continuity of Operations

See regional plan, Section 1.

Section 2: Disease Surveillance

Disease surveillance activities are conducted at the regional level. See Regional Plan, Section 2.

Section 3: Laboratory

See regional plan, Section 3. The Nursing Supervisor at the county health department will work with regional CEDS and Laboratory staff to facilitate viral testing of any person presenting with ILI that has epidemiological risk factors for novel influenza.

Section 4: Healthcare Planning

See Regional Plan, Section 4. Contact information for hospitals, physicians, pharmacies and mental health providers is attached to this annex. Contact and capacity information for nursing homes and home health agencies is included in the Non-Transportable Patient SOP which is part of the Mass Clinic Response Annex to the EOP. Additional information regarding hospital resources and capacity is available through the Hospital Resource Tracking System (HRTS). Hospital data in HRTS includes: staffed beds, available beds, available PPE, ventilators, respirators, negative pressure beds and any stockpiled drugs. The Regional Hospital Coordinator is responsible for accessing hospital data through HRTS.

Section 5: Vaccine Administration and Use

See regional plan, Section 5. Local staff may be asked to administer vaccine as it becomes available. All doses will be administered and tracked according to federal and State requirements. Vaccine will be administered at the regional office in Union City.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Section 6: Antivirals

See regional plan, Section 6. Local staff may be asked to administer antiviral medications in response to an outbreak. All doses will be administered and tracked according to federal and State requirements.

Section 7: Community Interventions

See regional plan, Section 7. Implementation of community interventions will be coordinated with local, regional and State officials. The Local Public Health Director will communicate recommended social distancing measures to the county mayor, sheriff and Director of Schools. Enforcement of social distancing measures will be the responsibility of local officials. Local staff may be asked to provide information to the public and local officials regarding recommended community interventions.

Section 8: Communication

See regional plan, Section 8. Public Health messages will be coordinated with State and regional officials. Local staff may be asked to contact local officials in order to coordinate community interventions or other containment measures. The local emergency operations center may be activated to facilitate communication with State/regional officials or coordinate communications activities.

Section 9: Workforce and Psychosocial Support

See regional plan, Section 9. Local resources for workforce and community psychosocial support services are listed in an appendix to this county annex. Local staff may be asked to share resource information with affected persons who need financial, spiritual, physical or medical assistance during a pandemic.

Obion County

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Obion County Annex TDH Influenza Pandemic Response Plan

Core Plan

The county-level response to an influenza pandemic will be coordinated with regional and state-level response activities. The roles and responsibilities of response partners are described in the regional plan.

Operational Sections:

Section 1: Continuity of Operations

See regional plan, Section 1.

Section 2: Disease Surveillance

Disease surveillance activities are conducted at the regional level. See Regional Plan, Section 2.

Section 3: Laboratory

See regional plan, Section 3. The Nursing Supervisor at the county health department will work with regional CEDS and Laboratory staff to facilitate viral testing of any person presenting with ILI that has epidemiological risk factors for novel influenza.

Section 4: Healthcare Planning

See Regional Plan, Section 4. Contact information for hospitals, physicians, pharmacies and mental health providers is attached to this annex. Contact and capacity information for nursing homes and home health agencies is included in the Non-Transportable Patient SOP which is part of the Mass Clinic Response Annex to the EOP. Additional information regarding hospital resources and capacity is available through the Hospital Resource Tracking System (HRTS). Hospital data in HRTS includes: staffed beds, available beds, available PPE, ventilators, respirators, negative pressure beds and any stockpiled drugs. The Regional Hospital Coordinator is responsible for accessing hospital data through HRTS.

Section 5: Vaccine Administration and Use

See regional plan, Section 5. Local staff may be asked to administer vaccine as it becomes available. All doses will be administered and tracked according to federal and State requirements. Vaccine will be administered at the regional office in Jackson.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Section 6: Antivirals

See regional plan, Section 6. Local staff may be asked to administer antiviral medications in response to an outbreak. All doses will be administered and tracked according to federal and State requirements.

Section 7: Community Interventions

See regional plan, Section 7. Implementation of community interventions will be coordinated with local, regional and State officials. The Local Public Health Director will communicate recommended social distancing measures to the county mayor, sheriff and Director of Schools. Enforcement of social distancing measures will be the responsibility of local officials. Local staff may be asked to provide information to the public and local officials regarding recommended community interventions.

Section 8: Communication

See regional plan, Section 8. Public Health messages will be coordinated with State and regional officials. Local staff may be asked to contact local officials in order to coordinate community interventions or other containment measures. The local emergency operations center may be activated to facilitate communication with State/regional officials or coordinate communications activities.

Section 9: Workforce and Psychosocial Support

See regional plan, Section 9. Local resources for workforce and community psychosocial support services are listed in an appendix to this county annex. Local staff may be asked to share resource information with affected persons who need financial, spiritual, physical or medical assistance during a pandemic.

Tipton County

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Tipton County Annex TDH Influenza Pandemic Response Plan

Core Plan

The county-level response to an influenza pandemic will be coordinated with regional and state-level response activities. The roles and responsibilities of response partners are described in the regional plan.

Operational Sections:

Section 1: Continuity of Operations

See regional plan, Section 1.

Section 2: Disease Surveillance

Disease surveillance activities are conducted at the regional level. See Regional Plan, Section 2.

Section 3: Laboratory

See regional plan, Section 3. The Nursing Supervisor at the county health department will work with regional CEDS and Laboratory staff to facilitate viral testing of any person presenting with ILI that has epidemiological risk factors for novel influenza.

Section 4: Healthcare Planning

See Regional Plan, Section 4. Contact information for hospitals, physicians, pharmacies and mental health providers is attached to this annex. Contact and capacity information for nursing homes and home health agencies is included in the Non-Transportable Patient SOP which is part of the Mass Clinic Response Annex to the EOP. Additional information regarding hospital resources and capacity is available through the Hospital Resource Tracking System (HRTS). Hospital data in HRTS includes: staffed beds, available beds, available PPE, ventilators, respirators, negative pressure beds and any stockpiled drugs. The Regional Hospital Coordinator is responsible for accessing hospital data through HRTS.

Section 5: Vaccine Administration and Use

See regional plan, Section 5. Local staff may be asked to administer vaccine as it becomes available. All doses will be administered and tracked according to federal and State requirements. Vaccine will be administered at the regional office in Jackson.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Section 6: Antivirals

See regional plan, Section 6. Local staff may be asked to administer antiviral medications in response to an outbreak. All doses will be administered and tracked according to federal and State requirements.

Section 7: Community Interventions

See regional plan, Section 7. Implementation of community interventions will be coordinated with local, regional and State officials. The Local Public Health Director will communicate recommended social distancing measures to the county mayor, sheriff and Director of Schools. Enforcement of social distancing measures will be the responsibility of local officials. Local staff may be asked to provide information to the public and local officials regarding recommended community interventions.

Section 8: Communication

See regional plan, Section 8. Public Health messages will be coordinated with State and regional officials. Local staff may be asked to contact local officials in order to coordinate community interventions or other containment measures. The local emergency operations center may be activated to facilitate communication with State/regional officials or coordinate communications activities.

Section 9: Workforce and Psychosocial Support

See regional plan, Section 9. Local resources for workforce and community psychosocial support services are listed in an appendix to this county annex. Local staff may be asked to share resource information with affected persons who need financial, spiritual, physical or medical assistance during a pandemic.

Weakley County Annex TDH Influenza Pandemic Response Plan

Core Plan

The county-level response to an influenza pandemic will be coordinated with regional and state-level response activities. The roles and responsibilities of response partners are described in the regional plan.

Operational Sections:

Section 1: Continuity of Operations

See regional plan, Section 1.

Section 2: Disease Surveillance

Disease surveillance activities are conducted at the regional level. See Regional Plan, Section 2.

Section 3: Laboratory

See regional plan, Section 3. The Nursing Supervisor at the county health department will work with regional CEDS and Laboratory staff to facilitate viral testing of any person presenting with ILI that has epidemiological risk factors for novel influenza.

Section 4: Healthcare Planning

See Regional Plan, Section 4. Contact information for hospitals, physicians, pharmacies and mental health providers is attached to this annex. Contact and capacity information for nursing homes and home health agencies is included in the Non-Transportable Patient SOP which is part of the Mass Clinic Response Annex to the EOP. Additional information regarding hospital resources and capacity is available through the Hospital Resource Tracking System (HRTS). Hospital data in HRTS includes: staffed beds, available beds, available PPE, ventilators, respirators, negative pressure beds and any stockpiled drugs. The Regional Hospital Coordinator is responsible for accessing hospital data through HRTS.

Section 5: Vaccine Administration and Use

See regional plan, Section 5. Local staff may be asked to administer vaccine as it becomes available. All doses will be administered and tracked according to federal and State requirements. Vaccine will be administered at the regional office in Union City.

TDH – West Tennessee Pandemic Influenza Response Plan-Draft

Section 6: Antivirals

See regional plan, Section 6. Local staff may be asked to administer antiviral medications in response to an outbreak. All doses will be administered and tracked according to federal and State requirements.

Section 7: Community Interventions

See regional plan, Section 7. Implementation of community interventions will be coordinated with local, regional and State officials. The Local Public Health Director will communicate recommended social distancing measures to the county mayor, sheriff and Director of Schools. Enforcement of social distancing measures will be the responsibility of local officials. Local staff may be asked to provide information to the public and local officials regarding recommended community interventions.

Section 8: Communication

See regional plan, Section 8. Public Health messages will be coordinated with State and regional officials. Local staff may be asked to contact local officials in order to coordinate community interventions or other containment measures. The local emergency operations center may be activated to facilitate communication with State/regional officials or coordinate communications activities.

Section 9: Workforce and Psychosocial Support

See regional plan, Section 9. Local resources for workforce and community psychosocial support services are listed in an appendix to this county annex. Local staff may be asked to share resource information with affected persons who need financial, spiritual, physical or medical assistance during a pandemic.
