Joel C. Clinton, Statistical Analyst 1
Emily C. Anderson, Statistical Analyst 1

The History of the Bureau of Labor Statistics (BLS) Safety and Health Statistical Programs

The seeds for safer workplaces through improving knowledge were sown at the beginning of the 20th century. Back then, the BLS fielded its first full-scale survey of safety and health conditions in American workplaces, with its 1912 study of industrial accidents in the iron and steel industry. Paralleling its interest in worker safety, the BLS also sponsored the pioneering work of industrial hygienists, such as Dr. Alice Hamilton's early 20th century research on lead poisoning in the workplace. Other BLS studies of individual industries and safety and health topics followed, but it was not until the late 1930's that injury recordkeeping was sufficiently uniform to permit the collection of nationwide work-injury data.

Once the American Standard Method of Measuring and Recording Work-Injury Experience (the Z16.1 standard) was accepted by employers and statistical agencies, the BLS launched an annual nationwide survey of work injuries that had resulted in death, permanent impairment, or temporary disability (unable to perform a regularly established job beyond the day of injury). Spanning three decades, these surveys proved useful in measuring and monitoring injury frequency and severity; however, they had some major limitations: first, the work-injury data were compiled only from employers who volunteered to record and report that information; second, only disabling injuries defined in the Z16.1 standard were counted. Thus, numerous work injuries that required medical treatment but did not result in a full day away from work were excluded from the survey estimates, as were, with few exceptions, occupational illnesses. These and other limitations eventually were addressed in a major piece of safety legislation passed by the Congress in the waning days of 1970.

The Occupational Safety and Health Act of 1970 was passed to ensure "so far as possible every, working man and woman in the nation safe and healthful working conditions and to preserve our human resources" (PL 91-596, 1970). As a result of this legislation, the Occupational Safety and Health Administration (OSHA) was created under the Assistant Secretary of Labor for Occupational Safety and Health to enforce the regulations established by the 1970 act. Very specific language in the act gave an indication that Congress recognized statistics on workplace injuries and diseases were essential to an effective national program of prevention. The act, among other things, directed the Secretary of Labor to issue regulations to require employers to maintain records on workplace injuries and illnesses. The Secretary of Labor was also directed to compile accurate statistics on occupational injuries and illnesses and to make periodic reports on such occurrences.

The responsibility for collecting statistics on occupational injuries and illnesses was delegated to the BLS. In order to further the purposes of this act, the language was quite specific: "The Secretary shall compile accurate statistics on work injuries and illnesses which shall include all disabling, serious or significant injuries and illnesses, whether or not involving loss of time from work other than minor injuries requiring only first aid treatment and which do not involve medical treatment, loss of consciousness, restriction of work or motion, or transfer to another job." The purposes of the act are quite comprehensive and include the establishment of occupational safety and health standards, carrying out inspections and investigations, ensuring the maintenance of recordkeeping by employers on occupational injuries and illnesses, requiring reporting by employers of work-related deaths, and conducting research relating to occupational safety and health.

OSHA is charged with the responsibility of enforcing the provisions of the 1970 act, and BLS is the collector of statistics.

Census of Fatal Occupational Injuries 2014

INTRODUCTION

The Census of Fatal Occupational Injuries (CFOI), administered by the Bureau of Labor Statistics (BLS) in conjunction with the Tennessee Department of Labor and Workforce Development, compiles detailed information on all work-related fatalities occurring in the State of Tennessee. The program is based upon the 1987 recommendations of the National Academy of Sciences and the Keystone Dialogue Group that emphasized the need for a reliable measure of occupational fatalities. In response to these recommendations the CFOI program was developed to produce accurate, comprehensive, descriptive, timely, and accessible counts of fatal workplace injuries that occur during a given year.

To ensure the most inclusive count of work-related fatalities, the Census uses a broad definition of fatal-occupational injury. The Census includes fatal-occupational injuries that occur to self-employed persons, those engaged in farm operations, traffic accidents in which the person was in work status, incidents at a person's work facility, and to government employees. Fatalities that occur during a person's commute to or from work are excluded from the Census.

In an effort to compile counts that are as complete as possible, CFOI uses diverse sources to identify, verify, and profile fatal-work injuries. Source documents such as death certificates, workers' compensation reports, and Federal and State agency administrative records are cross-referenced to gather key information about each workplace fatality such as the occupation in which the decedent worked, worker demographics, equipment or machinery involved, and other circumstances of the event. Two or more independent source documents are used to verify the work relationship of each fatal-work injury. The CFOI definitions located in Appendix A explain the CFOI work relationship criteria. The CFOI program compiles the most complete, verifiable count of fatal-occupational injuries in the United States. Fatal illnesses are excluded from the statistical tables due to the latency period of many occupational illnesses along with the difficulty of relating illnesses to work-related events.

Data compiled by the CFOI program are issued annually. These data are used by safety and health professionals, policy analysts, and researchers to assist in the prevention of fatal work-related injuries in the following ways:

- Informs workers of life-threatening hazards associated with various jobs
- Promotes safer work practices through enhanced job-safety training
- Develops new safety equipment
- Assesses and improves workplace-safety standards
- Identifies new areas for safety research

This report was prepared by the Labor Market Information, Labor Research and Statistics Division of the Tennessee Department of Labor and Workforce Development under the administration of Commissioner Burns P. Phillips, III, Administrator Linda J. Davis, and Director Mattie S. Miller, and under the direction of Division Supervisor Kenneth B. Wolentarski. Mr. Wolentarski supervised the preparation of this publication by staff members Mohammad M. Hossain, Joel C. Clinton, and Emily C. Anderson.

Death data were provided by the Tennessee Department of Health, Division of Policy, Planning and Assessment, Office of Health Statistics.

For additional information on work fatalities in Tennessee, call (615) 741-1749, (800) 778-3966, e-mail the Division Supervisor at Kenneth.Wolentarski@tn.gov or access our Web site at <http://www.tn.gov/workforce/article/workforce-occupational-injuries-illnesses-and-fatalities>.

For additional information on work-related fatalities in the United States call (202) 691-6175, e-mail cfoistaff@bls.gov, or access the Internet site at <http://www.bls.gov/iif/oshcfoi1.htm>.

If any information is inaccessible due to a disability, please e-mail accessible@bls.gov with your request for information and the desired format.

**Census of
Fatal Occupational Injuries
Tennessee, 2014 Tables**

**Table 1. Fatal occupational injuries by worker characteristics and event or exposure
Tennessee, 2014 (124* fatalities)**

Selected worker characteristics	2014						
	Total fatalities (number)	Event or exposure ¹					
		Transportation incidents ²	Violence and other injuries by persons or animals ³	Contact with objects and equipment	Falls, slips, trips	Exposure to harmful substances or environments	Fires and explosions
Total	124	56	15	16	23	9	5
Employee status							
Wage and salary ⁴	94	48	9	13	15	4	5
Self-employed ⁵	30	8	6	3	8	5	--
Gender							
Men	113	52	13	15	20	9	4
Women	11	4	2	1	3	--	--
Age							
Under 16 years	--	--	--	--	--	--	--
16 to 17 years	--	--	--	--	--	--	--
18 to 19 years	1	--	--	1	--	--	--
20 to 24 years	7	2	2	--	1	--	1
25 to 34 years	16	9	--	2	--	--	--
35 to 44 years	19	7	4	2	1	--	3
45 to 54 years	38	15	4	4	12	3	--
55 to 64 years	21	10	3	2	4	--	--
65 years and over	22	13	--	4	4	1	--
Race or ethnic origin⁶							
White (non-Hispanic)	98	47	9	12	19	8	3
Black or African-American (non-Hispanic)	19	9	4	--	--	--	--
Hispanic or Latino	6	--	--	3	--	--	--
American Indian or Alaska Native (non-Hispanic)	--	--	--	--	--	--	--
Asian (non-Hispanic)	--	--	--	--	--	--	--
Native Hawaiian or Pacific Islander (non-Hispanic)	--	--	--	--	--	--	--

¹ Based on the BLS Occupational Injury and Illness Classification System (OIICS) 2.01 implemented for 2011 data forward.

² Includes roadway, nonroadway, air, water, rail fatal occupational injuries, and fatal occupational injuries resulting from being struck by a vehicle.

³ Includes violence by persons, self-inflicted injury, and attacks by animals.

⁴ May include volunteers and workers receiving other types of compensation.

⁵ Includes self-employed workers, owners of unincorporated businesses and farms, paid and unpaid family workers, and may include some owners of incorporated businesses or members of partnerships.

⁶ Persons identified as Hispanic or Latino may be of any race. The race categories shown exclude data for Hispanics and Latinos.

NOTE: *Data are preliminary. Totals for major categories may include subcategories not shown separately. Dashes indicate no data reported or data that do not meet publication criteria. CFOI fatality counts exclude illness-related deaths unless precipitated by an injury event.

¹ CFOI has used several versions of the North American Industry Classification System (NAICS) since 2003 to define industry. For more information on the version of NAICS used in this year, see our definitions page at <http://www.bls.gov/iif/oshcdef.htm>.

² Based on the BLS Occupational Injury and Illness Classification System (OIICS) 2.01 implemented for 2011 data forward.

³ Includes roadway, nonroadway, air, water, rail fatal occupational injuries, and fatal occupational injuries resulting from being struck by a vehicle.

⁴ Includes violence by persons, self-inflicted injury, and attacks by animals.

⁵ Includes fatal injuries at all establishments categorized as Mining (Sector 21) in the North American Industry Classification System, including establishments not governed by the Mine Safety and Health Administration (MSHA) rules and reporting, such as those in Oil and Gas Extraction.

⁶ Includes fatal injuries to workers employed by governmental organizations regardless of industry.

NOTE: Data are preliminary. Totals for major categories may include subcategories not shown separately. Dashes indicate no data or data that do not meet publication criteria. CFOI fatality counts exclude illness-related deaths unless precipitated by an injury event.

¹ CFOI has used several versions of the Standard Occupation Classification (SOC) system since 2003 to define occupation. For more information on the version used in this year, see our definitions page at <http://www.bls.gov/iif/oshcdef.htm>.

² Based on the BLS Occupational Injury and Illness Classification System (OIICS) 2.01 implemented for 2011 data forward.

³ Includes roadway, nonroadway, air, water, rail fatal occupational injuries, and fatal occupational injuries resulting from being struck by a vehicle.

⁴ Includes violence by persons, self-inflicted injury, and attacks by animals.

⁵ Includes fatal injuries to persons identified as resident armed forces regardless of individual occupation listed.

NOTE: Data for 2014 are preliminary. Totals for major categories may include subcategories not show separately. Dashes indicate no data reported or data that do not meet publication criteria. CFOI fatality counts exclude illness-related deaths unless precipitated by an injury event.

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, in cooperation with state and federal agencies, Census of Fatal Occupational Injuries, September, 2015.

**Census of
Fatal Occupational Injuries
Tennessee, 2014 Charts**

Chart 1. Number of fatal occupational injuries
Tennessee, 2005 - 2014

The total number of fatal occupational injuries in Tennessee increased 30 percent from 2013 to 2014. The preliminary count of 124 work-related fatalities in 2014 reversed a three year trend of declining work-related fatalities in Tennessee.

* Data for 2014 are preliminary.

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, September 2015.

Chart 2. Number of fatal occupational injuries by selected race or ethnic origin
Tennessee, 2005 - 2014

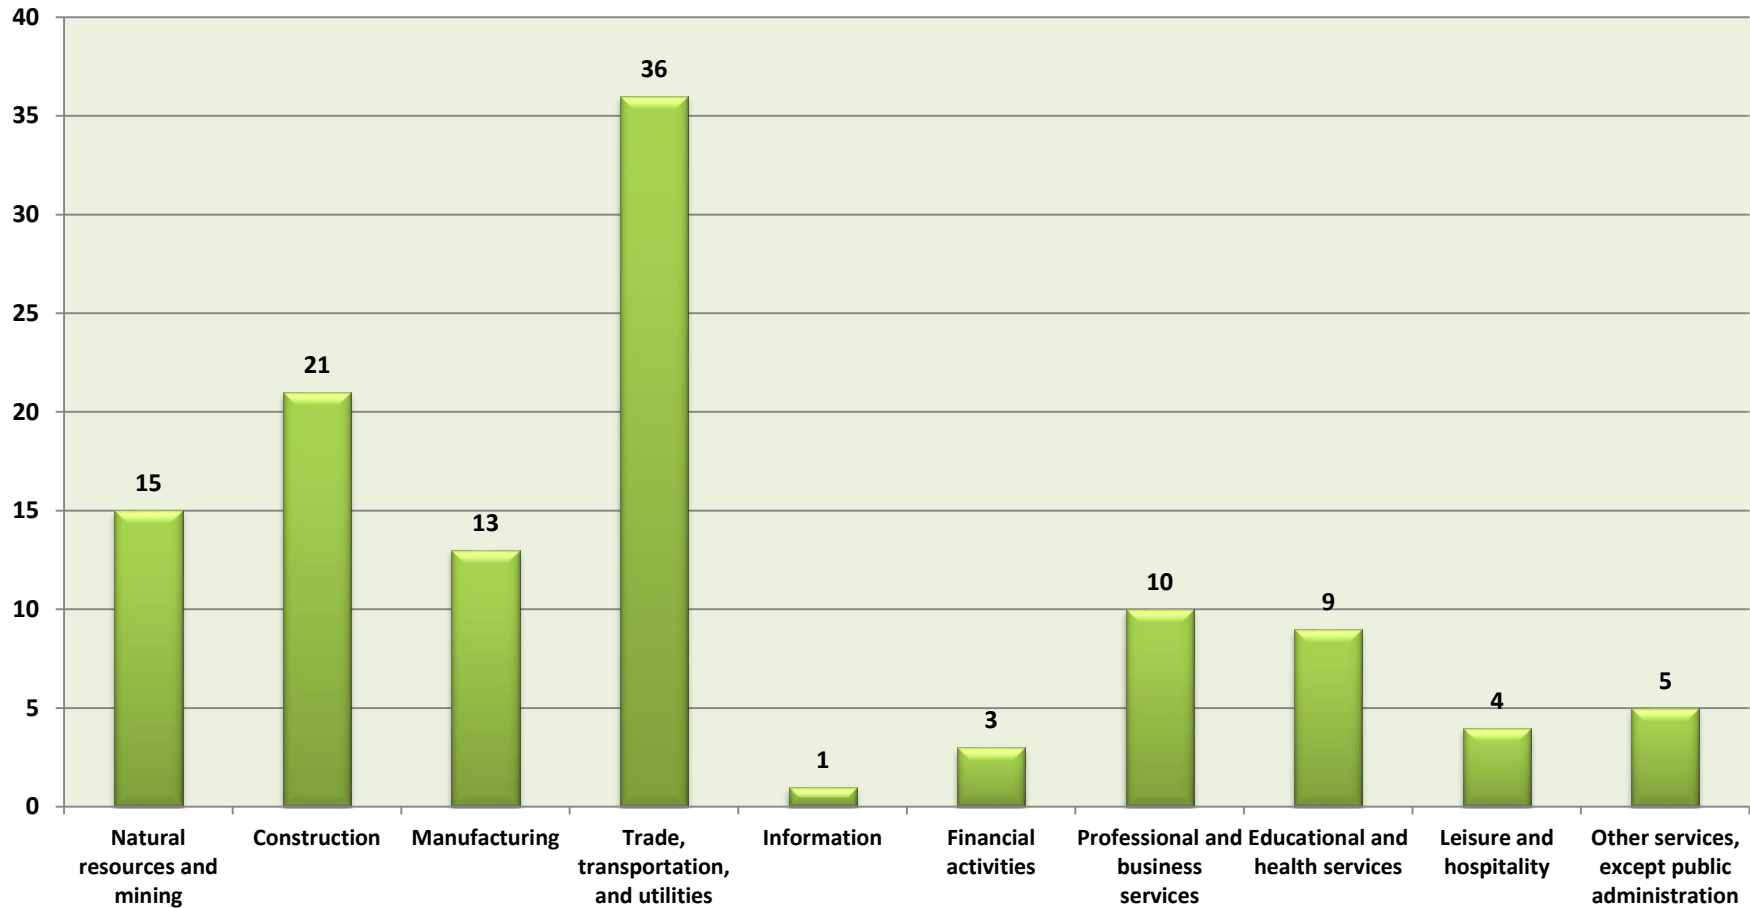

From 2013 to 2014, fatal occupational injuries in Tennessee increased by 30 percent. Fatal occupational injuries to white, non-Hispanics and to black, non-Hispanics both increased 46 percent. Fatal occupational injuries to Hispanic or Latino workers decreased 33 percent.

* Data for 2014 are preliminary.

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, September 2015.

Chart 3. Number of fatal occupational injuries in selected industries
 Tennessee, 2014 (124* fatalities)

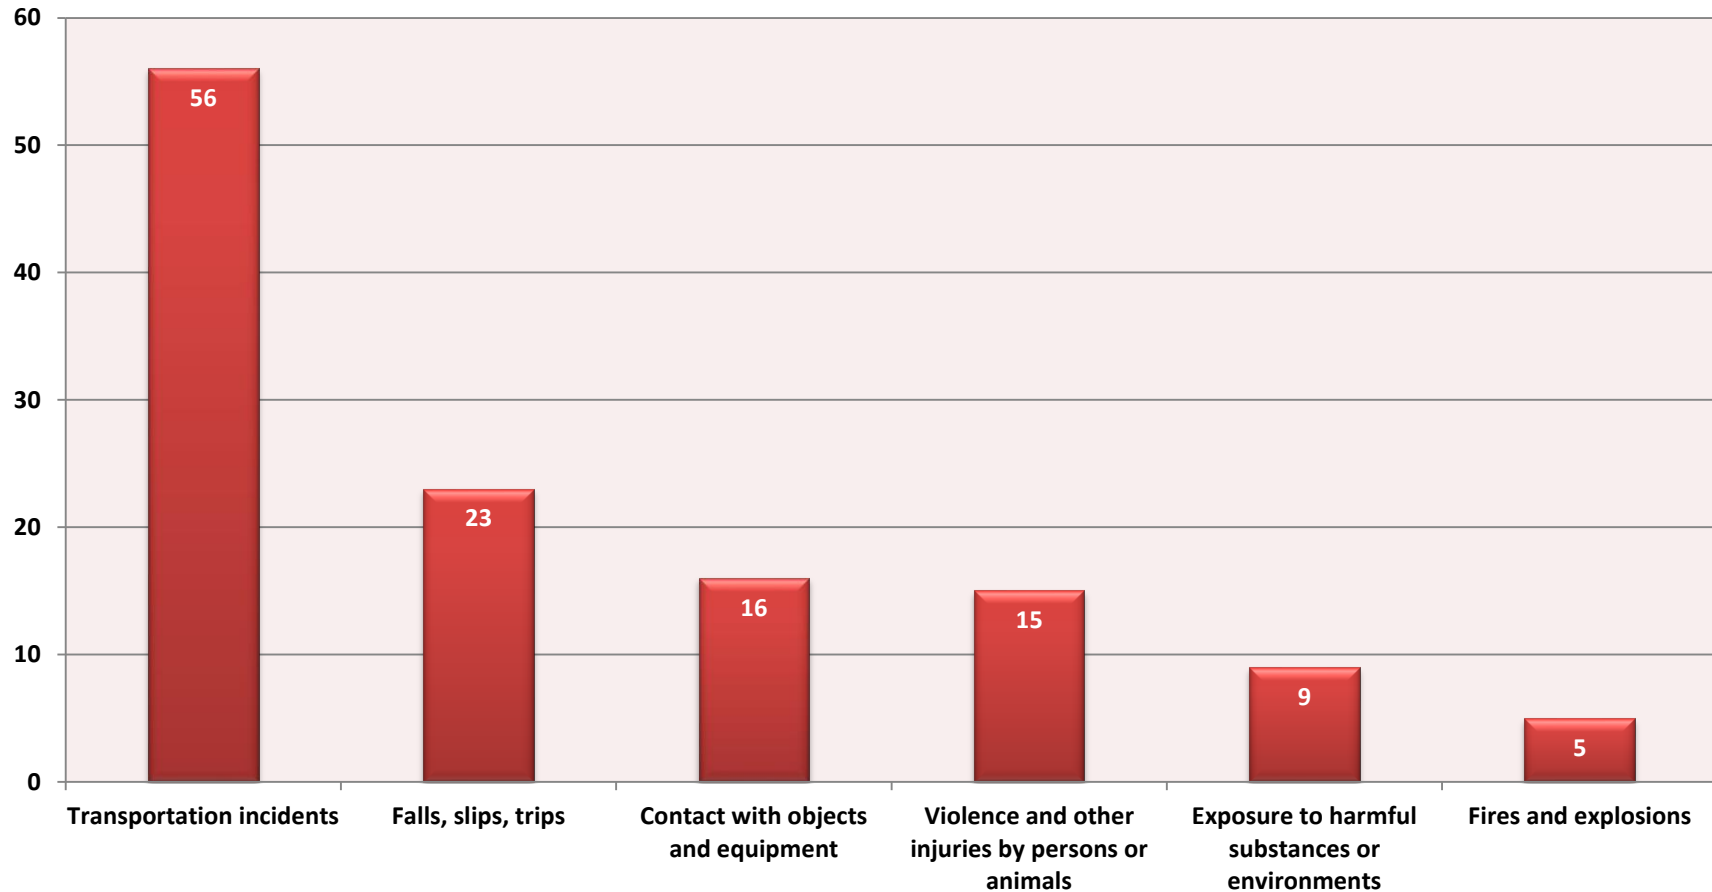

There were a preliminary number of 124 fatal occupational injuries in Tennessee during 2014. Twenty-nine percent were recorded in the industry category of trade, transportation, and utilities. This category includes wholesale trade, retail trade, and transportation and warehousing.

* Data for 2014 are preliminary.

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, September 2015.

Chart 4. Number of fatal occupational injuries by event or exposure
Tennessee, 2014 (124* fatalities)

Forty-five percent of the 124 fatal occupational injuries in Tennessee during 2014 were the result of a transportation incident in which one or more vehicles was in normal operation. The second highest percentage of fatal occupational injuries occurred as a result of falls, slips, or trips. These events accounted for 18 percent of the work-related fatalities during 2014.

* Data for 2014 are preliminary.

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, September 2015.

Chart 5. Percent distribution of fatal occupational injuries by event and gender
 Tennessee, 2014 (124* fatalities)

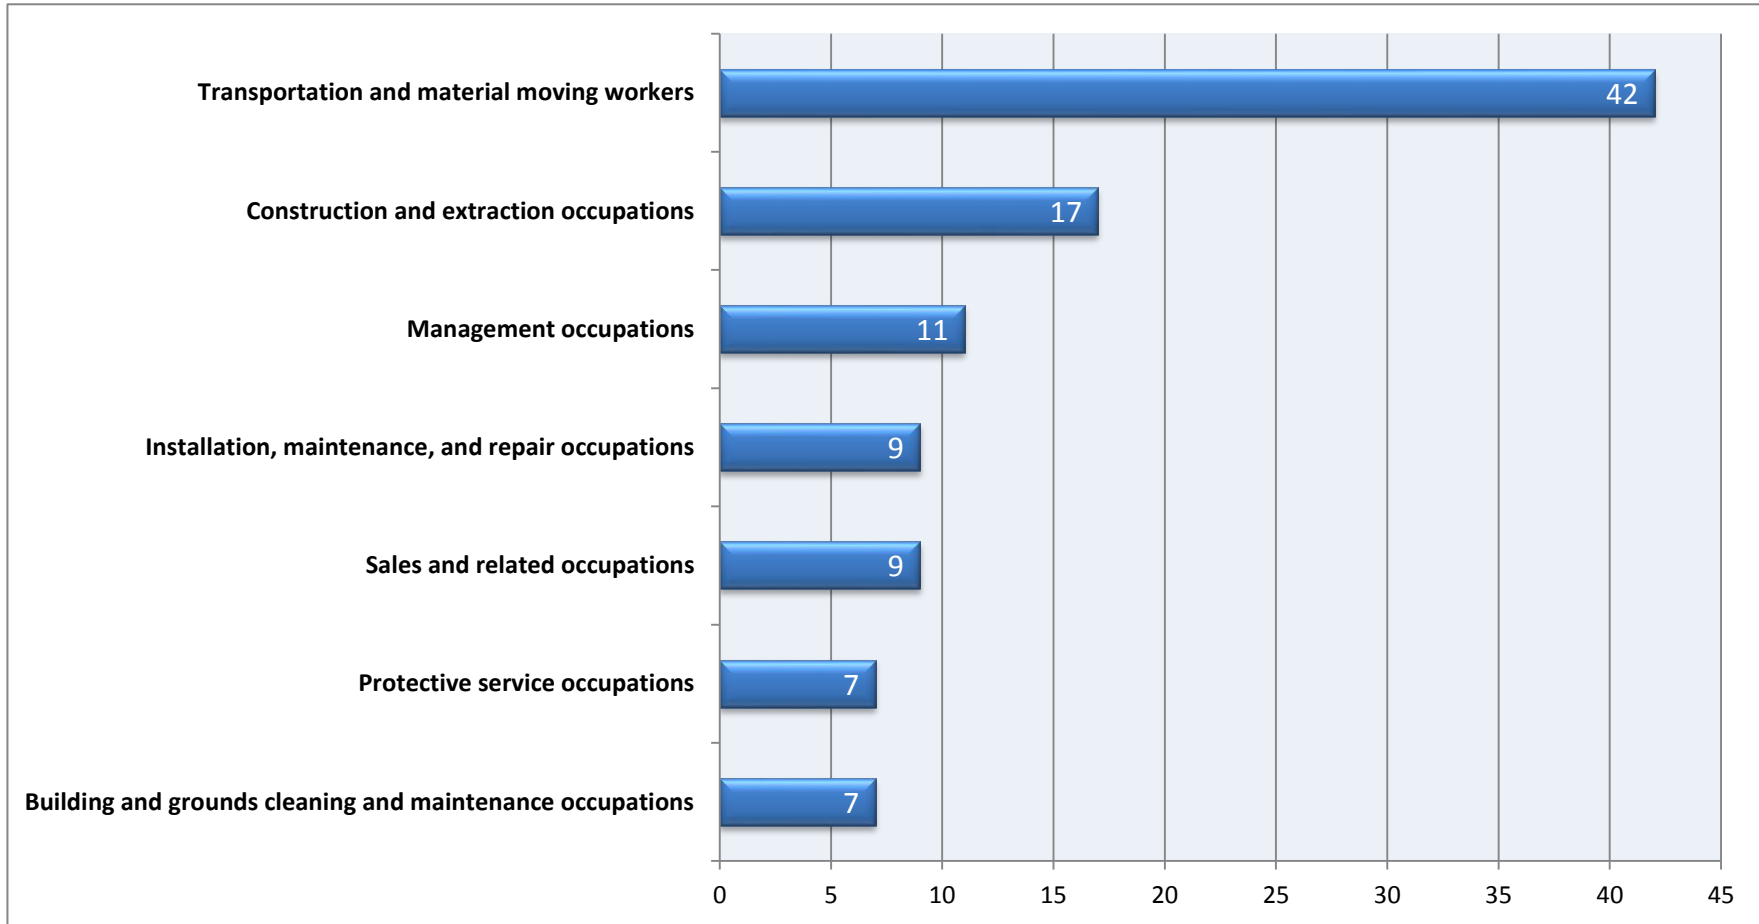

During 2014, there were 113 fatal occupational injuries to men and 11 fatal occupational injuries to women workers in Tennessee. Transportation incidents were the leading cause of work-related fatalities to both men and women. Forty-six percent of all fatal work injuries to men were the result of these incidents and 36 percent of the fatalities to women were also attributed to transportation incidents.

* Data for 2014 are preliminary.

SOURCE: U.S. Department of Labor, Bureau of Statistics, September 2015.

**Chart 6. Number of fatal occupational injuries by major occupational group
Tennessee, 2014 (124* fatalities)**

Transportation and material moving workers sustained the greatest number of work-related fatalities in Tennessee during 2014. They registered a total of 42 fatalities or 34 percent of the 124 total occupational fatalities for the census year.

* Data for 2014 are preliminary.

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, September 2015.

Chart 7. Number and percent distribution of fatal occupational injuries by age group
Tennessee, 2014 (124* fatalities)

Fatal occupational injuries in Tennessee during 2014 were most frequent among workers between the ages of 45 and 54 years of age. These workers sustained 38 work-related fatalities during the survey year or 30 percent of the 124 recorded in Tennessee.

* Data for 2014 are preliminary.
SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, September 2015.

Chart 8. Percent distribution of fatal occupational injuries by location of event
Tennessee, 2014 (124* fatalities)

There were 46 work-related fatalities in Tennessee during 2014 where the event occurred on a street or highway. This was the location for 37 percent of all the work-related fatalities. Industrial places including factories, plants, and industrial yards were the locations where the second highest number of fatalities occurred.

* Data for 2014 are preliminary.

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, September 2015.

Chart 9. Number of fatal occupational injuries by month of death
Tennessee, 2014 (124* fatalities)

During 2014, there were 124 fatal occupational injuries in Tennessee. Of these, there were 66 during the first half of the calendar year and 58 during the second half of the year.

* Data for 2014 are preliminary.

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, September 2015.

Chart 10. Number of fatal occupational injuries by day of incident
Tennessee, 2014 (124* fatalities)

There were 124 fatal occupational injuries in Tennessee during 2014. Sixty-two percent of the fatal injuries occurred on Monday, Tuesday, or Wednesday and 38 percent of the injured workers were injured on Thursday, Friday, Saturday, or Sunday.

* Data for 2014 are preliminary.

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, September 2015.

¹ State totals include other events and exposures, such as bodily reaction, in addition to those shown separately.

² Totals for 2013 are revised and final. Preliminary 2013 data issued September 11, 2014 reported a total of 4,405 fatal work injuries for calendar year 2013. Since then, an additional 180 job-related fatal injuries were identified, bringing the total job-related fatal injury count for 2013 to 4,585. Includes four fatal injuries that occurred within the territorial boundaries of the United States, but a State of incident could not be determined.

³ Includes five fatal injuries that occurred within the territorial boundaries of the United States, but a State of incident could not be determined.

⁴ Based on the BLS Occupational Injury and Illness Classification System (OIICS) 2.01 implemented for 2011 data forward.

⁵ Includes violence by persons, self-inflicted injuries, and attacks by animals.

⁶ Includes highway, nonhighway, air, water, and rail fatal injuries, and fatal injuries resulting from being struck by a vehicle.

p Data for 2014 are preliminary. Revised and final 2014 data are scheduled to be released in spring 2016.

NOTE: Dashes indicate no data reported or data that do not meet publication criteria. CFOI fatality counts exclude illness-related deaths unless precipitated by an injury event.

**Census of
Fatal Occupational Injuries
United States, 2014 Charts**

Chart 11. Number of fatal occupational injuries
United States, 2005 - 2014

The preliminary count of fatal occupational injuries in the United States during 2014 is 4,679. This represents a two percent increase over the updated count of 4,585 recorded during 2013. This preliminary count is well below the ten year average of 5,027.

* Data for 2014 are preliminary.

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, October 2015.

Chart 12. Number of fatal occupational injuries by state
 United States, 2014 (4,679* Fatalities)

Twenty-four states had counts showing more fatal workplace injuries in 2014 compared to 2013. There were 22 states and the District of Columbia which had fewer fatal work injuries in 2014 than in 2013 and four states had fatal counts that remained the same. *Data for 2014 are preliminary.
 SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, 2015.

Chart 13. States with the greatest number of fatal occupational injuries
United States, 2014 (4,679* fatalities)

The nine states with the greatest number of fatal occupational injuries in the United States during 2014 accounted for 2,090 of the 4,679 total fatalities. This represents 45 percent of the total number of work related fatalities

* Data for 2014 are preliminary.

Section II

Survey of Nonfatal Occupational Injuries and Illnesses 2014

INTRODUCTION

The passage of the Occupational Safety and Health Act of 1970 (Public Law 91-596) created an extensive and detailed set of regulations applying to all private employers in the United States who were not covered by previous safety legislation. The Tennessee Occupational Safety and Health Act of 1972 replaces the Federal Occupational Safety and Health Act of 1970 as it applies to private employers in Tennessee and also extends coverage to state and local government units.

The United States Department of Labor, Bureau of Labor Statistics (BLS), was given the responsibility of developing a comprehensive safety and health statistical program. To achieve this, the BLS, in cooperation with many state agencies, conducts an annual Survey of Occupational Injuries and Illnesses (SOII). The data collected from the employers is used to estimate the numbers, incidence rates, and seriousness of work-related injuries and illnesses. In Tennessee, the data collected by the Tennessee Department of Labor and Workforce Development in cooperation with the BLS provides the statistics necessary to identify the industries, occupations, and worker groups having relatively high risks of job-related injury or illness.

The Labor Research and Statistics Division, after reviewing the Survey of Occupational Injuries and Illnesses, verifies the accuracy of the data. They then analyze the results and create the charts, tables, and other graphical illustrations to demonstrate their research findings. The methods for displaying the data are intended to aid in audience understanding and are written to ensure the confidentiality of the surveyed companies. We would greatly appreciate any suggestions and/or comments pertaining to the information contained in this publication, including what you would like to see in coming years.

Until 1992, the survey identified industries with high-incidence rates, but shed little light on the characteristics of workplace incidents. Beginning in 1992, the annual survey was expanded to provide additional detailed information on workplace injuries and illnesses. This information included worker and case-characteristic data on nonfatal injuries and illnesses resulting in days away from work. With the more detailed information, employers as well as safety and health organizations can better define and focus on areas of special interest.

Data for mining industry are provided by the U.S. Department of Labor, Mine Safety and Health Administration. Railroad transportation data are provided by the Federal Railroad Administration, U.S. Department of Transportation. Farm employers in Tennessee with no more than 10 employees and self-employed persons with no employees are exempt from participation in the annual survey. This publication presents occupational injury and illness data for all other Tennessee employers with at least one employee.

The Tennessee Department of Labor and Workforce Development wishes to express its appreciation to the many employers who responded to the survey and without whose cooperation this publication would not have been possible.

METHODS FOR CALCULATING INCIDENCE RATES

Employers can compute their company's injury and illness rate by multiplying the number of injuries (N) by 200,000 (base rate of 40 hours per week for 50 weeks for 100 full-time equivalent workers), and dividing by the number of hours (H) worked by all employees during the year. The calculator entry would be $N \times 200,000 \div H =$.

Total Cases Incidence Rates

The total cases incidence rate is the number of recordable injuries and illnesses for a company based on 100 full-time equivalent employees. Using your OSHA 300 log, add columns H (cases with days away from work), I (cases with job transfer or restriction), and J (other recordable cases). Multiply the sum by 200,000 and then divide the product by the total number of hours worked by all employees for the calendar year. Remember that each case is to be classified in only one column, (either G, H, I, or J) based on the seriousness of that case. Days away from work are always considered to be more serious than transferred or restricted duty, even though the restricted days may be greater in number than the number of days away from work. You do, however, enter the actual number of days away from work as well as the actual number of restricted or transferred days in columns K and L on your OSHA 300 log.

worksheet		
Number of all injuries and illnesses (Columns H + I + J)	Number of hours worked by all employees	Incidence rate for total cases
<input type="text"/>	$\times 200,000 \div$	<input type="text"/>
	<input type="text"/>	$=$ <input type="text"/>

DART (Days Away, Restricted or Transferred) Incidence Rates

The DART incidence rate is the rate for the total number of cases involving days away from work and cases that have restricted or transferred duty. (This was formerly known as lost time incidence rates.) Using the OSHA 300 log, add columns H (cases with days away from work) and I (cases with job transfer or restrictions). Multiply the sum by 200,000 and divide the product by the total number of hours worked by all employees for the calendar year.

worksheet		
Number of all lost time injuries and illnesses (Columns H + I)	Number of hours worked by all employees	Incidence rate for DART cases
<input type="text"/>	$\times 200,000 \div$	<input type="text"/>
	<input type="text"/>	$=$ <input type="text"/>

¹ Incidence rates represent the number of injuries and illnesses per 100 full-time equivalent workers and were calculated as (N/EH) x 200,000 where
N = number of injuries and illnesses
EH = total hours worked by all employees during the calendar year
200,000 = base for 100 equivalent full-time workers (working 40 hours per week, 50 weeks per year)

² Totals include data for industries not shown separately.

³ Days-away-from-work cases include those that result in days away from work with or without job transfer or restriction.

⁴ Excludes farms with fewer than 11 employees.

⁵ Data for mining (Sector 21 in the North American Industry Classification System- United States, 2012) include establishments not governed by the Mine Safety and Health Administration (MSHA) rules and reporting, such as those in oil and gas extraction and related support activities.

Data for mining operators in coal, metal, and nonmetal mining are provided to BLS by the Mine Safety and Health Administration, U.S. Department of Labor. Independent mining contractors are excluded from the coal, metal, and nonmetal mining industries. Data do not reflect the changes OSHA made to its recordkeeping effective January 1, 2012; therefore estimates in these industries are not comparable to other industries.

Data for employers in rail transportation are provided to BLS by the Federal Railroad Administration, U.S. Department of Transportation.

NOTE: Because of rounding, components may not add to totals. Dashes indicate data that do not meet publication guidelines.

SOURCE: Bureau of Labor Statistics, U.S. Department of Labor, Survey of Occupational Injuries and Illnesses, in cooperation with participating State agencies.

¹ Incidence rates represent the number of injuries and illnesses per 100 full-time workers and were calculated as: (N/EH) x 200,000 where
N = number of injuries and illnesses
EH = total hours worked by all employees during the calendar year
200,000 = base for 100 equivalent full-time workers (working 40 hours per week, 50 weeks per year).

² Totals include data for industries not shown separately.

³ North American Industry Classification System -- United States, 2012.

⁴ Days-away-from-work cases include those that result in days away from work with or without job transfer or restriction.

⁵ Excludes farms with fewer than 11 employees.

⁶ Data for mining (Sector 21 in the North American Industry Classification System, 2012 edition) include establishments not governed by the Mine Safety and Health Administration (MSHA) rules and reporting, such as those in oil and gas extraction and related support activities. Data for mining operators in coal, metal, and nonmetal mining are provided to BLS by the Mine Safety and Health Administration, U.S. Department of Labor. Independent mining contractors are excluded from the coal, metal, and nonmetal mining industries. These data do not reflect the changes the Occupational Safety and Health Administration made to its recordkeeping requirements effective January 1, 2002; therefore estimates for these industries are not comparable to estimates in other industries.

⁷ Data for mining operators in this industry are provided to BLS by the Mine Safety and Health Administration, U.S. Department of Labor. Independent mining contractors are excluded. These data do not reflect the changes the Occupational Safety and Health Administration made to its recordkeeping requirements effective January 1, 2002; therefore estimates for these industries are not comparable to estimates in other industries.

⁸ Data for employers in rail transportation are provided to BLS by the Federal Railroad Administration, U.S. Department of Transportation.

⁹ Data too small to be displayed.

NOTE: Because of rounding, components may not add to totals. Dashes indicate data do not meet publication guidelines.

SOURCE: U.S. Bureau of Labor Statistics, U.S. Department of Labor, Survey of Occupational Injuries and Illnesses in cooperation with participating state agencies, September 29, 2015.

**Survey of Nonfatal
Occupational Injuries and Illnesses
Tennessee, 2014 Charts**

**Chart 14. Incidence rates of nonfatal occupational injuries and illnesses
Tennessee, private industry, 2005-2014**

Over the past ten years, the incidence rate for nonfatal occupational injuries and illnesses has declined by 33 percent in Tennessee. The rate has fallen from 4.8 recordable occupational injuries and illnesses per 100 full-time equivalent workers in 2005 to a rate of 3.2 in 2014.

**Chart 15. Incidence rates of nonfatal occupational injuries and illnesses
by select industry sectors
Tennessee, 2012 - 2014**

In each of the past three years, local government industries had the highest incidence rate in Tennessee followed by state government. Private industry and the lowest incidence rates during the same time frame.

NOTE: Because of rounding and data exclusion of nonclassifiable responses, data may not sum to the totals.
SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, Tennessee Department of Labor, October, 2015.

**Chart 16. Percent distribution of nonfatal occupational injuries and illnesses involving days away from work¹ by employee age group
Tennessee, all ownerships, 2014 (Total cases = 19,610)**

Workers between the ages of 25 and 44 experienced 66 percent of all nonfatal occupational injuries and illnesses resulting in days away from work in Tennessee during 2014.

NOTE: Because of rounding and data exclusion of nonclassifiable responses, data may not sum to the totals.

**Chart 17. Percent distribution of nonfatal occupational injuries and illnesses involving days away from work by major part of body affected
Tennessee, all ownerships, 2014 (Total cases = 19,610)**

Injury and illness cases resulting in days away from work were most prevalent when the injured part of body was in the upper extremities. When the injured part of body was in the trunk, 71 percent of the cases were injuries to a region of the back.

NOTE: Because of rounding and data exclusion of nonclassifiable responses, data may not sum to the totals.

**Chart 18. Percent distribution of nonfatal occupational injuries and illnesses involving days away from work¹ by nature of injury or illness
Tennessee, all ownerships, 2014 (Total Cases = 19,610)**

Occupational injury and illnesses cases resulting in days away from work were most commonly associated with injuries listed as sprains, strains, or tears. This type of injury accounted for 38 percent of all days away from work cases.

NOTE: Because of rounding and data exclusion of nonclassifiable responses, data may not sum to the totals.

¹ Incidence rates represent the number of injuries and illnesses per 100 full-time workers and were calculated as (N/EH) x 200,000 where

N = number of injuries and illnesses

EH = total hours worked by all employees during the calendar year

200,000 = base for 100 full-time workers (working 40 hours per week, 50 weeks per year)

² Totals include data for industries not shown separately.

³ Days-away-from-work cases include those that result in days away from work with or without job transfer or restriction.

⁴ Excludes farms with fewer than 11 employees.

⁵ Data for mining (Sector 21 in the North American Industry Classification System - United States, 2012) include establishments not governed by the Mine Safety and Health Administration (MSHA) rules and reporting, such as those in oil and gas extraction and related support activities.

Data for mining operators in coal, metal, and nonmetal mining are provided to BLS by the Mine Safety and Health Administration, U.S. Department of Labor.

Independent mining contractors are excluded from the coal, metal, and nonmetal mining industries. Data do not reflect the changes OSHA made to its recordkeeping effective January 1, 2012; therefore estimates in these industries are not comparable to other industries.

Data for employers in rail transportation are provided to BLS by the Federal Railroad Administration, U.S. Department of Transportation.

NOTE: Because of rounding, components may not add to totals. Dashes indicate data that do not meet publication guidelines.

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, Survey of Occupational Injuries and Illnesses, in cooperation with participating State agencies.

Table 10. Incidence rates¹ of nonfatal occupational injuries and illnesses by industry and case type, United States, 2014 - continued

Industry ²	NAICS code ³	Total recordable cases	Cases with days away from work, job transfer, or restriction			Other recordable cases
			Total	Cases with days away from work ⁴	Cases with job transfer or restriction	

¹ Incidence rates represent the number of injuries and illnesses per 100 full-time workers and were calculated as : (N/EH) x 200,000 where

N = number of injuries and illnesses

EH = total hours worked by all employees during the calendar year

200,000 = base for 100 equivalent full-time workers (working 40 hours per week, 50 weeks per year).

² Totals include data for industries not shown separately.

³ *North American Industry Classification System* - United States, 2012.

⁴ Days-away-from-work cases include those that result in days away from work with or without job transfer or restriction.

⁵ Excludes farms with fewer than 11 employees.

⁶ Data for mining (Sector 21 in the *North American Industry Classification System*, 2012 edition) include establishments not governed by the Mine Safety and Health Administration (MSHA) rules and reporting, such as those in oil and gas extraction and related support activities. Data for mining operators in coal, metal, and nonmetal mining are provided to BLS by the Mine Safety and Health Administration, U.S. Department of Labor. Independent mining contractors are excluded from the coal, metal, and nonmetal mining industries. These data do not reflect the changes the Occupational Safety and Health Administration made to its recordkeeping requirements effective January 1, 2002; therefore estimates for these industries are not comparable to estimates in other industries.

⁷ Data for mining operators in this industry are provided to BLS by the Mine Safety and Health Administration, U.S. Department of Labor. Independent mining contractors are excluded. These data do not reflect the changes the Occupational Safety and Health Administration made to its recordkeeping requirements effective January 1, 2002; therefore estimates for these industries are not comparable to estimates in other industries.

⁸ Data for employers in rail transportation are provided to BLS by the Federal Railroad Administration, U.S. Department of Transportation.

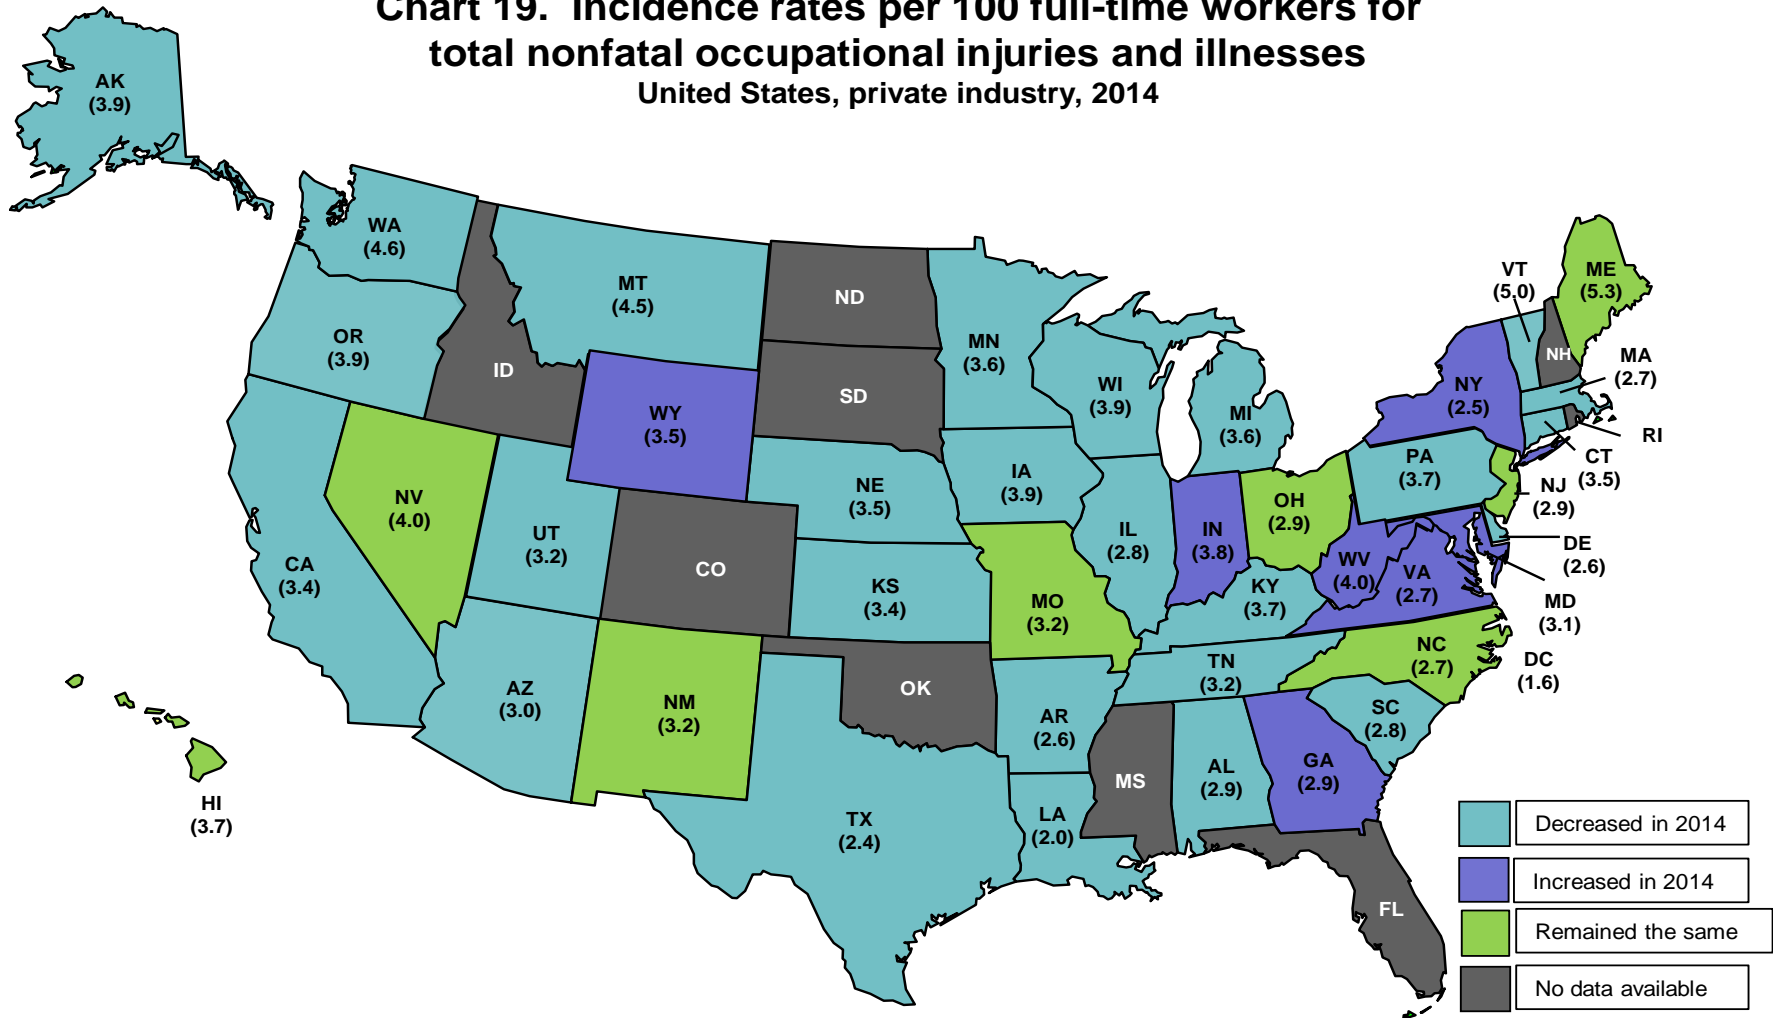

⁹ Data too small to be displayed.

NOTE: Because of rounding, components may not add to totals. Dash indicates data do not meet publication guidelines.

**Survey of Nonfatal Occupational
Injuries and Illnesses
United States, 2014 Charts**

Chart 19. Incidence rates per 100 full-time workers for total nonfatal occupational injuries and illnesses
 United States, private industry, 2014

Twenty-six states and the District of Columbia showed a decrease in their total private sector incidence rates when comparing 2014 to 2013 data. Seven states showed an increase in incidence rates while eight states had rates that did not change. Colorado, Florida, Idaho, Mississippi, New Hampshire, North Dakota, Oklahoma, Rhode Island, and South Dakota did not have state rates available. SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, 2015.

**Chart 20. Incidence rates of nonfatal occupational injuries and illnesses
by major industry sector
United States, 2012 - 2014**

In each of the past three years, local government industries had the highest incidence rate followed by state government. Private industry had the lowest incidence rates each of the past three years.

**Chart 21. Percent distribution of nonfatal occupational injuries and illnesses involving days away from work by nature of injury or illness
United States, all ownerships, 2014 (Total Cases = 1,157,410)**

Sprains, strains, and tears made up over one-third of all occupational injuries and illnesses involving days away from work in the United States during the 2014 calendar year. That rate remained essentially unchanged from the 2013 figures.

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, November, 2015.

Chart 22. Percent distribution of nonfatal occupational injuries and illnesses involving days away from work by part of body affected
United States, all ownerships, 2014 (Total Cases = 1,157,410)

Upper extremities were the most frequently injured part of the body with 346,170 cases. There were 268,860 injuries to lower extremities and 200,250 injuries to the back.

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, November, 2015.

**Chart 23. Percent distribution of nonfatal occupational injuries and illnesses involving days away from work by event or exposure
United States, all ownerships, 2014 (Total Cases = 1,157,410)**

Overexertion and bodily reaction along with falls, slips, and trips accounted for approximately 60 percent of all injuries and illnesses with days away from work. The number of cases resulting in falls, slips, and trips increased by seven percent from 2013.

Appendices

Appendix A

Census of Fatal Occupational Injuries (CFOI): Definitions

Traumatic injury:

A **traumatic injury** is defined as any wound or damage to the body resulting from acute exposure to energy, such as heat, electricity, or impact from a crash or fall, or from the absence of such essentials as heat or oxygen, caused by a specific event or incident within a single workday or shift. Included are open wounds, intracranial and internal injuries, heatstroke, hypothermia, asphyxiation, acute poisonings resulting from short-term exposures limited to the worker's shift, suicides and homicides, and work injuries listed as underlying or contributory causes of death. Heart attacks and strokes are considered illnesses and therefore excluded from CFOI unless a traumatic injury contributed to the death.

Work-relationship criteria:

A **work-relationship** exists if an event or exposure results in the fatal injury or illness of a person:

- (1) ON the employer's premises and the person was there to work; or
- (2) OFF the employer's premises and the person was there to work, or the event or exposure was related to the person's work or status as an employee.

The employer's premises includes buildings, grounds, parking lots, and other facilities and property used in the conduct of business. Work is defined as duties, activities, or tasks that produce a product or result that are done in exchange for money, goods, profit, or benefit and, that are legal activities in the United States.

The following are clarifications of the CFOI work-relationship criteria:

Volunteer workers: Fatalities to volunteer workers who are exposed to the same work hazards and perform the same duties or functions as paid employees and that meet the CFOI work-relationship criteria are IN scope.

Institutionalized persons: Fatalities to institutionalized persons, including inmates of penal and mental institutions, sanitariums, and homes for the aged, infirm and needy, are OUT of scope unless they are employed off the premises of their institutions.

Suicides and homicides that meet the CFOI work-relationship criteria are IN scope.

Recreational activities: Fatal events or exposures that occurred during a person's recreational activities that were not required by the person's employer, are OUT of scope.

Travel status: Fatal events or exposures that occurred when a person was in travel status are IN scope if the travel was for work purposes or was a condition of employment.

Commuting: Fatal events or exposures that occur during a person's normal commute to or from work are OUT of scope, unless the incident occurred on the employer's premises.

Off-duty police: Homicides occurring to off-duty police officers are generally IN scope. Other fatalities to off-duty police are IN scope if they are performing a police-related function, such as directing traffic at the scene of an accident or rescuing someone from a fire.

Undocumented workers: Fatalities to undocumented workers are IN scope provided they meet the other work-relationship criteria.

Appendix B

Technical Notes

Scope of survey:

The Survey of Occupational Injuries and Illnesses (SOII) was composed of selected employers in the State of Tennessee who had 11 or more employees and employers with 10 or fewer employees who had been pre-notified to keep records for participation in the surveyed year(s). The survey relates to employers in the following industry divisions.

Goods Producing

Natural resources and mining
Construction
Manufacturing

Service Providing

Trade, transportation, and utilities
Information
Financial activities
Professional and business services
Education and health services
Leisure and hospitality
State and local government

All classes of employees (part-time, full-time, casual, salaried, etc.) in these industries were covered. Excluded were self-employed individuals, private households, federal government employees, and farms employing fewer than 11 employees. The Mine Safety and Health Administration, U.S. Department of Labor, provided data conforming to the OSHA definitions from employers covered by the Mine Safety and Health Acts. Data for railroad employees were provided by the Federal Railroad Administration, U.S. Department of Transportation.

Questionnaires were mailed to 5,000 sample units for the 2014 data. A number of these units were excluded because they were no longer in operation, were not within the scope of the survey, were included in the report for other locations, received duplicate survey forms for the same location, or because the survey itself was not mailable due to an inadequate address. The original and follow-up mailings and telephone calls resulted in approximately 415 fewer usable samples.

Estimating procedures:

Estimates of injury and illness data were obtained for each sampling industry by weighing the data of each reporting unit by the inverse of the sampling ratio of the cell in each industry employment size group (i.e. sampling cell). Each of these sampling cells was adjusted for non-response. The aggregate data for the industry were then adjusted for new businesses in the industry by benchmarking, a form of ratio estimation.

Industrial classification:

Reporting units are classified into industries on the basis of their principal product or activity. For a reporting unit making more than one product or engaging in more than one activity, data for the unit are included in the industry indicated by the more important product or activity for the company. The data were tabulated according to the *North American Industrial Classification System (NAICS)*, 2012 edition.

STATE OF TENNESSEE POLICY OF NONDISCRIMINATION

Pursuant to the State of Tennessee's policy of nondiscrimination, the Tennessee Department of Labor and Workforce Development does not discriminate on the basis of race, sex, religion, color, national or ethnic origin, age, disability, or military service in its policies, or in the admission or access to, or treatment or employment in, its programs, services, or activities.

Equal Employment Opportunity / Affirmative Action inquiries or complaints should be directed to the Tennessee Department of Labor and Workforce Development, Civil Rights, Diversity, and Compliance Assistance Section, 220 French Landing Drive, Nashville, TN 37243-0655 or by telephone at (615) 253-4477.

Auxiliary aids and services are available upon request to individuals with disabilities.

The Tennessee Department of Labor and Workforce Development is committed to principles of equal opportunity, equal access, and affirmative action. Auxiliary aids and services are available upon request to individuals with disabilities.

A photograph of a construction site, heavily tinted with a blue color. The scene shows a complex network of wooden formwork and scaffolding used for pouring concrete. Several workers wearing hard hats and safety harnesses are visible, engaged in their tasks. The background shows more of the construction site with rebar structures. The overall atmosphere is industrial and busy.
